Note: Coefficient of OLS regression with dummies. Values that are statistically significant are indicated in bold (see Annex A). Note reference category for mothers' education is primary education or less. Does not speak the language of assessment at home is defined for both immigrant and non-immigrant students, i.e. it is possible to have a value of 1 on this dummy variable and not be an immigrant student.

Note: Coefficient of OLS regression with dummies. Values that are statistically significant are indicated in bold (see Annex A). Note reference category for mothers' education is primary education or less. Does not speak the language of assessment at home is defined for both immigrant and non-immigrant students, i.e. it is possible to have a value of 1 on this dummy variable and not be an immigrant student. Attending pre-primary is defined as those attending pre-primary school for at least one year.

Note: Coefficient of OLS regression with dummies, for each group of students: first-, second- and non-immigrants. Values that are statistically significant are indicated in bold (see Annex A). Note reference category for mothers' education is primary education or less. Does not speak the language of assessment at home is defined for both immigrant and non-immigrant students, i.e. it is possible to have a value of 1 on this dummy variable and not be an immigrant student.

Note: Coefficient of OLS regression with dummies. Values that are statistically significant are indicated in bold (see Annex A). Note reference category for mothers' education is primary education or less. Does not speak the language of assessment at home is defined for both immigrant and non-immigrant students, i.e. it is possible to have a value of 1 on this dummy variable and not be an immigrant student.

Note: Disadvantaged schools are those in the country-specific fourth quartile of the concentration measure of students with low educated mothers at the school level (these are the 25% of school with the highest proportion of students with low educated mothers). Students with low educated mothers are those whose mother's educational attainment is lower than upper secondary education. Students with highly educated mothers are those whose mother's educational attainment is tertiary education.

Note: Disadvantage quartiles are defined at the country level ranking schools according to the proportion of students with low educated mothers. The highest disadvantage quartile is the one with the 25% of schools where the proportion of students with low educated mothers is highest. The opposite is true for the lowest disadvantage quartile. Low educated mothers are those with educational attainment lower than an upper-secondary education. Highly educated mothers are those with an tertiary level education (a university education). Values that are statistically significant are indicated in bold (see Annex A).
