## OIL, GAS, COAL AND ELECTRICITY

QUARTERLY STATISTICS

**SECOND QUARTER 2011**

International  
Energy Agency

2011

## OIL, GAS, COAL AND ELECTRICITY

This publication provides up-to-date, detailed quarterly statistics on oil, coal, natural gas and electricity for the OECD countries.

Oil statistics cover production, trade, refinery intake and output, stock changes and consumption for crude oil, NGL and nine selected oil product groups. Statistics for electricity, natural gas and coal show supply and trade. Import and export data are reported by origin and destination. Moreover, oil and hard coal production are reported on a worldwide basis.

**QUARTERLY STATISTICS**

***SECOND QUARTER 2011***

# INTERNATIONAL ENERGY AGENCY

The International Energy Agency (IEA), an autonomous agency, was established in November 1974. Its primary mandate was – and is – two-fold: to promote energy security amongst its member countries through collective response to physical disruptions in oil supply, and provide authoritative research and analysis on ways to ensure reliable, affordable and clean energy for its 28 member countries and beyond. The IEA carries out a comprehensive programme of energy co-operation among its member countries, each of which is obliged to hold oil stocks equivalent to 90 days of its net imports. The Agency's aims include the following objectives:

- Secure member countries' access to reliable and ample supplies of all forms of energy; in particular, through maintaining effective emergency response capabilities in case of oil supply disruptions.
- Promote sustainable energy policies that spur economic growth and environmental protection in a global context – particularly in terms of reducing greenhouse-gas emissions that contribute to climate change.
- Improve transparency of international markets through collection and analysis of energy data.
  - Support global collaboration on energy technology to secure future energy supplies and mitigate their environmental impact, including through improved energy efficiency and development and deployment of low-carbon technologies.
    - Find solutions to global energy challenges through engagement and dialogue with non-member countries, industry, international organisations and other stakeholders.

IEA member countries:

Australia  
Austria  
Belgium  
Canada  
Czech Republic  
Denmark  
Finland  
France  
Germany  
Greece  
Hungary  
Ireland  
Italy  
Japan  
Korea (Republic of)  
Luxembourg  
Netherlands  
New Zealand  
Norway  
Poland  
Portugal  
Slovak Republic  
Spain  
Sweden  
Switzerland  
Turkey  
United Kingdom  
United States

# I. INTRODUCTION

The aim of *Oil, Gas, Coal and Electricity Quarterly Statistics* is to provide rapid, accurate and detailed statistics on production, supply and demand and trade of the major energy forms mainly in, but not limited to, the OECD area. The information contained in this publication consists of:

## *Oil*

- Production of crude oil and NGL for the major producers in the world.
- Refinery balances for crude oil, NGL, refinery feedstocks, and total (including inputs of origin other than crude oil and NGL).
- Complete product balances of production, trade, refinery intake and output, final consumption, stock levels and changes.
- Crude oil, NGL and refinery feedstocks imports from 47 origins and exports to 24 destinations.
- Trade data for main product groups, LPG and naphtha; imports from 44 origins and exports to 30 destinations.

## *Natural gas*

- Balances of supply and consumption of OECD Member countries.
- Imports from 28 origins and exports to 20 destinations.

## *Coal*

- World hard coal and brown coal production.
- World steam coal and coking coal trade.
- Coking coal and steam coal imports and exports for major OECD countries.

## *Electricity*

- Electricity production, trade and (apparent) consumption in OECD Member countries.

The *oil and natural gas* information is derived from the Monthly Oil and Gas Statistics database. This information system has been developed by the Combined Energy Staff of the IEA in close collaboration with administrations of Member countries and international oil industry experts. It has been tailored to the needs not only of those involved in international supply and transportation, but also those concerned with oil and energy trends from the viewpoint of energy policy formulation and economic policy in general.

*Coal* data for OECD countries for the first three quarters of a year are submitted by Member countries, obtained from official national publications or websites or from other official publications, or are estimated using other reliable sources. For the fourth quarter of a year, all quarterly data are revised to be consistent with the annual data from the *Coal Information publication*. For EU member countries, quarterly trade data are generally obtained from EUROSTAT. Data for Non-OECD countries are obtained either directly from governments, official publications or estimated using other reliable sources.

A principal objective in presenting quarterly data on coal production and trade is to provide a guide to recent developments in the world market. For this reason, Total OECD and World data are estimated by the Secretariat. In order to make these aggregate estimates, data for some countries and for some recent quarters have been estimated where official statistics are not yet available. In general, such

estimates are based on official statistics for previous months, as well as on industry and other Secretariat sources.

The **Electricity** information is derived from the *Monthly Electricity Statistics* database. The consistency of the whole time series with the annual data from the *Electricity Information* publication is assured starting with the Third Quarter 2006 Edition.

Inevitably, information on the recent past is frequently subject to subsequent revision. The policy of *Oil, Gas, Coal and Electricity Quarterly Statistics* in this respect is as follows:

- Data are published, for all countries for which they are available, approximately one quarter after that to which they refer.
- Data will be revised in subsequent issues, if necessary.
- Historical data will also be revised, where necessary, to render them consistent with current definitions.

It will be possible to publish the more detailed oil and gas trade and balance calculations only for the

most recent quarters. Even those do not provide all the detailed data available in this part of the energy data bank. Should users require longer or more detailed series, these are available on the IEA website ([www.iea.org](http://www.iea.org)).

Other queries relating to *Oil, Gas, Coal and Electricity Quarterly Statistics* should be addressed to:

## II. DEFINITIONS AND NOTES

### 1. Units and conversion factors

**Oil:** All figures are reported to the nearest whole number of thousand metric tons, except where otherwise specified.

**Natural gas:** All figures are reported to the nearest whole number of million cubic metres (at 15°C and 760 mm Hg).

**Coal:** All figures are reported to the nearest whole number of thousand (or million) metric tons.

**Electricity:** All figures are reported to the nearest whole number of gigawatt hours (GWh).

### 2. Notes and definitions

#### 2.1 Crude oil and petroleum products

**Crude oil:** Crude oil is a mineral oil of natural origin comprising a mixture of hydrocarbons and associated impurities, such as sulphur. It exists in the liquid phase under normal surface temperature and pressure and its physical characteristics (density, viscosity, etc.) are highly variable. This category includes field or lease condensate recovered from associated and non-associated gas where it is commingled with the commercial crude oil stream.

**Natural gas liquids (NGL):** NGL are liquid or liquefied hydrocarbons recovered from natural gas in separation facilities or gas processing plants. Natural gas liquids include ethane, propane, butane (normal and iso-), (iso) pentane and pentanes plus (sometimes referred to as natural gasoline or plant condensate).

**Refinery feedstocks:** A refinery feedstock is a processed oil destined for further processing (e.g. straight run fuel oil or vacuum gas oil) excluding blending. With further processing, it will be transformed into one or more components and/or finished products. This definition also covers returns from the petrochemical industry to the refining industry (e.g. pyrolysis gasoline, C4 fractions, gasoil and fuel oil fractions).

**Inputs of origin other than crude oil and NGL:** This category includes synthetic crude oil from tar sands, oil shale, etc., liquids from coal liquefaction, hydrogen and emulsified oils (e.g. Orimulsion). It also includes additives and oxygenates (including biofuels) destined for blending with fuels or for fuel use.

**Petroleum products:** Petroleum products are any oil-based products which can be obtained from primary distillation and are normally used outside the refinery industry. The exceptions to this are those unfinished products which are classified as refinery feedstocks above.

**Ethane:** A naturally gaseous straight-chain hydrocarbon (C<sub>2</sub>H<sub>6</sub>), extracted from natural gas and refinery gas streams.

**Liquefied petroleum gases (LPG):** LPG are light saturated paraffinic hydrocarbons derived from the refinery processes, crude oil stabilisation and natural gas processing plants. They consist mainly of propane (C<sub>3</sub>H<sub>8</sub>) and butane (C<sub>4</sub>H<sub>10</sub>) or a combination of the two. They are normally liquefied under pressure for transportation and storage.

Commercial propanes and butanes may be of less than 99% purity. They can be liquefied at low

pressure (5-10 atmospheres). In the liquid state and at a temperature of 38°C they have a relative vapour pressure less than or equal to 24.5 bars (ASTM D 1267 standard method). Their specific gravity varies from 0.50 to 0.58.

**Naphtha:** Naphtha is a feedstock destined for the petrochemical industry (e.g. ethylene manufacture or aromatics production). Naphtha comprises material in the 30°C and 210°C distillation range or part of this range.

Naphtha imported for blending is reported as an import of naphtha, then shown on the interproduct transfer row, as a negative entry for naphtha, and a positive entry for the corresponding finished product (e.g. gasoline).

Naphtha imported for blending in refineries is reported as refinery feedstocks. It is used as refinery feedstocks for reforming processes and in the chemical industry.

**Total gasoline:** This category groups together the products described below:

- **Aviation gasoline:** This is motor spirit prepared especially for aviation piston engines, with an octane number suited to the engine, a freezing point of -60°C and a distillation range usually within the limits of 30°C and 180°C.
- **Gasoline type jet fuel:** This includes all light hydrocarbon oils for use in aviation turbine power units, distilling between 100°C and 250°C. They are obtained by blending kerosenes and gasolines or naphthas in such a way that the aromatic content does not exceed 25% in volume, and the vapour pressure is between 13.7kPa and 20.6kPa.
- **Motor gasoline:** Motor gasoline consists of a mixture of light hydrocarbons distilling between 35°C and 215°C. It is used as a fuel for land based spark ignition engines. Motor gasoline may include additives, oxygenates and octane enhancers, including lead compounds such as TEL (tetraethyl lead) and TML (tetramethyl lead).

*Unleaded Motor Gasoline:* Motor gasoline where lead compounds have not been added to enhance octane rating. It may contain traces of organic lead.

*Leaded motor gasoline:* Motor gasoline with TEL (tetraethyl lead) and/or TML (tetramethyl lead) added to enhance octane rating.

This category includes motor gasoline blending components (excluding additives/oxygenates), e.g. alkylates, isomate, reformate, cracked gasoline destined for use as finished motor gasoline.

**Total kerosene:** This category groups together the products described below:

- **Kerosene type jet fuel:** This is a distillate used for aviation turbine power units. It has the same distillation characteristics between 150°C and 300°C (generally not above 250°C) and flash point as kerosene. In addition, it has particular specifications (such as freezing point) which are established by the International Air Transport Association (IATA).
- **Other kerosene:** Other Kerosene comprises refined petroleum distillate and is used in sectors other than aircraft transport. It distils between 150°C and 300°C.

**Gas/diesel oil (distillate fuel oil):** Gas/diesel oil is primarily a medium distillate, distilling between 180°C and 380°C. Several grades are available depending on uses:

- Diesel oil for diesel compression ignition (cars, trucks, marine etc.).
- Light heating oil for industrial and commercial uses.
- Other gas oil including heavy gas oils which distil between 380°C and 540°C and which are used as petrochemical feedstocks.

**Fuel oil (residual):** This covers all residual (heavy) fuel oils (including those obtained by blending). Kinematic viscosity is above 10cSt at 80°C. The flash point is always above 50°C and density is always more than 0.90 kg/l.

- **Low sulphur content:** Heavy fuel oil with sulphur content lower than 1%.
- **High sulphur content:** Heavy fuel oil with sulphur content of 1% or higher.

**Other products:** The category “other products” groups together crude oil and NGL which do not pass through a refinery, refinery gas, white spirit and

SBP, lubricants, bitumen, paraffin waxes, petroleum coke and others. These are described below. (NB: Please see the country notes regarding oil supply for Table B13.)

- **Refinery gas (not liquefied):** Refinery gas includes a mixture of non-condensable gases mainly consisting of hydrogen, methane, ethane and olefins obtained during distillation of crude oil or treatment of oil products (e.g. cracking) in refineries. This also includes gases which are returned from the petrochemical industry.

- **White spirit and SBP:** White spirit and SBP are defined as refined distillate intermediates with a distillation in the naphtha/kerosene range. They are sub-divided as:

*Industrial spirit (SBP):* Light oils distilling between 30°C and 200°C. There are 7 or 8 grades of industrial spirit, depending on the position of the cut in the distillation range. The grades are defined according to the temperature difference between the 5% volume and 90% volume distillation points (which are not more than 60°C).

*White spirit:* Industrial spirit with a flash point above 30°C. The distillation range of white spirit is 135° to 200°C.

- **Lubricants:** Lubricants are hydrocarbons produced from distillate or residue; they are mainly used to reduce friction between bearing surfaces. This category includes all finished grades of lubricating oil, from spindle oil to cylinder oil, and those used in greases, including motor oils and all grades of lubricating oil base stocks.

- **Bitumen:** Bitumen is a solid, semi-solid or viscous hydrocarbon with a colloidal structure, being brown to black in colour, obtained as a residue in the distillation of crude oil, by vacuum distillation of oil residues from atmospheric distillation. Bitumen is often referred to as asphalt and is primarily used for construction of roads and for roofing material. This category includes fluidized and cut back bitumen.

- **Paraffin waxes:** These are saturated aliphatic hydrocarbons. These waxes are residues extracted when dewaxing lubricant oils. They have a crystalline structure which is more-or-less fine according to the grade. Their main characteristics

are as follows: they are colourless, odourless and translucent, with a melting point above 45°C.

- **Petroleum coke:** Petroleum coke is a black solid residue, obtained mainly by cracking and carbonising residue feedstock, tar and pitches in processes such as delayed coking or fluid coking. It consists mainly of carbon (90 to 95%) and has a low ash content. It is used as a feedstock in coke ovens for the steel industry, for heating purposes, for electrode manufacture and for production of chemicals. The two most important qualities are “green coke” and “calcinated coke”. This category also includes “catalyst coke” deposited on the catalyst during refining processes; this coke is not recoverable and is usually burned as refinery fuel.

- **Others:** All products not specifically mentioned above, for example: tar and sulphur. This category also includes aromatics (e.g. BTX or benzene, toluene and xylene) and olefins (e.g. propylene) produced within refineries.

## 2.2 Definitions of natural gas

**Natural gas:** Natural gas comprises gases, occurring naturally in underground deposits, whether liquefied or gaseous, consisting mainly of methane. It includes both “non-associated” gas originating from fields producing hydrocarbons only in gaseous form, and “associated” gas produced in association with crude oil as well as methane recovered from coal mines (colliery gas). Manufactured gas (produced from municipal or industrial waste, or sewage) and quantities vented or flared are not included.

## 2.3 Definitions of coal

**Hard coal:** This category comprises coal with a gross calorific value greater than 5 700 kcal/kg (23.9 GJ/t) on an ash-free but moist basis and with a mean random reflectance of vitrinite of at least 0.6.

There are two sub-categories of hard coal:

- **Coking coal:** defined as hard coal with a quality that allows the production of coke suitable to support a blast furnace charge.

- **Other bituminous coal and anthracite:** defined, as all other hard coal not classified as

coking coal. This category is referred to in this publication as **steam coal**. It is also commonly known as thermal coal.

**Brown coal:** This category comprises coal that is non-agglomerating with a gross calorific value less than 5 700 kcal/kg (23.9 GJ/t) containing more than 31 per cent volatile matter on a dry mineral matter free basis.

There are two sub-categories of brown coal:

- **Sub-bituminous coal** which is defined as non-agglomerating coal with a gross calorific value between 4 165 kcal/kg (17.4 GJ/t) and 5 700 kcal/kg (23.9 GJ/t).
- **Lignite:** defined as non-agglomerating coal with a gross calorific value less than 4 165 kcal/kg (17.4 GJ/t).

Note that **sub-bituminous coal** is included in **steam coal** (and hence **hard coal**) for the following countries: Australia, Belgium, Finland, France, Iceland, Indonesia, Japan, Korea, New Zealand, Mexico, Portugal and the United States.

## 2.4 Definitions of electricity

**Net electricity production:** This is equal to the gross electricity production less the electrical energy absorbed by the generating auxiliaries and the losses in the main generator transformers. All the published data is based on this definition.

## 3. Abbreviations and signs used in this Volume

<b>NGL:</b>	Natural gas liquids
<b>LPG:</b>	Liquefied petroleum gas
<b>Refinery intake (obs.):</b>	Refinery intake (observed)
<b>Intl. marine bunkers:</b>	International marine bunkers
<b>Gross consumption (obs.):</b>	Gross consumption (observed)
<b>Consumption (obs.):</b>	Consumption (observed)
<b>t:</b>	Metric ton
<b>Mt:</b>	Million metric tons
<b>GWh:</b>	Gigawatt hours

## 4. Geographical notes

### *Countries:*

**Australia** excludes the overseas territories.

**Denmark** excludes the Danish Faroes and Greenland for Gas, Coal and Electricity.

**France** includes Monaco and excludes the overseas territories Guadeloupe, Martinique, French Guyana, Reunion, St.-Pierre and Miquelon, New Caledonia, French Polynesia, Wallis and Futuna and Mayotte.

**Italy** includes San Marino and the Vatican.

**Japan** includes Okinawa.

**Portugal** includes the Açores and Madeira.

**Spain** includes the Canary Islands.

**Switzerland** does not include Liechtenstein for Coal and Electricity.

**The Netherlands** excludes Suriname and the Netherlands Antilles.

**United States** includes 50 States and District of Columbia. Oil also includes Puerto Rico, the U.S. Virgin Islands, and Guam. Coal imports and exports include all U.S. territories.

**United Kingdom** includes Jersey, Guernsey and the Isle of Man (except for electricity).

### **Turkey/Cyprus:**

Note by Turkey:

The information in this document with reference to "Cyprus" relates to the southern part of the Island. There is no single authority representing both Turkish and Greek Cypriot people on the Island. Turkey recognizes the Turkish Republic of Northern Cyprus (TRNC). Until a lasting and equitable solution is found within the context of United Nations, Turkey shall preserve its position concerning the "Cyprus" issue.

Note by all the European Union Member States of the OECD and the European Commission:

The Republic of Cyprus is recognised by all members of the United Nations with the exception of Turkey. The information in this report relates to the area under the effective control of the Government of the Republic of Cyprus.

## Country groupings

Chile, Slovenia and Israel became member countries of the OECD in 2010. For the moment, however, data for the new members have not been included in OECD totals for the 2010 editions of this publication, except for coal and electricity. For the other products, data for these countries will continue to be included with the OECD non-member countries, Chile in Latin America, Slovenia in Former Yugoslavia and Israel in Other Areas. The IEA Secretariat will work closely with the Administrations of these new OECD countries, especially on the consistency of the time series, for incorporating them into OECD totals in future publications.

The following country groupings are used for all of the totals throughout the book, unless specified otherwise in the table descriptions:

**Total OECD:** Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Korea, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, Slovak Republic, Spain, Sweden, Switzerland, Turkey, United Kingdom, United States.

**OECD North America:** Canada, Mexico, United States.

**OECD Pacific:** Australia, Japan, Korea, New Zealand.

**OECD Europe:** Total OECD except Australia, Canada, Japan, Korea, Mexico, New Zealand, United States.

**IEA:** Total OECD excluding Iceland and Mexico.

## 5. Description of individual tables

### 5.1 Description of oil tables

#### Tables A1-A3: world production and supply

These tables show world crude oil, NGL and non-conventional production and supply.

**Non conventional production:** This category includes the production of synthetic crude oil from tar sands, oil shale, etc., liquids from coal liquefaction, hydrogen and emulsified oils (e.g. Orimulsion). It also includes biofuels (Brazil and US figures).

#### Country groupings for world production and supply tables

**Former USSR:** Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Russian Federation, Tajikistan, Turkmenistan, Ukraine, Uzbekistan.

**Other Non-OECD Europe:** Albania, Bulgaria, Former Yugoslavia, Romania.

**Non-OPEC Latin America:** Argentina, Barbados, Bolivia, Brazil, Chile, Colombia, Cuba, Guatemala, Peru, Surinam, Trinidad and Tobago.

**Non-OPEC Africa:** Benin, Cameroon, Chad, Congo, Democratic Republic of Congo, Egypt, Equatorial Guinea, Gabon, Ghana, Ivory Coast, Mauritania, Morocco, South Africa, Sudan, Tunisia.

**Non-OPEC Middle East:** Bahrain, Israel, Oman, Syrian Arab Republic, Yemen.

**Non-OPEC East Asia:** Bangladesh, Brunei, China, India, Mongolia, Nepal, Pakistan.

**Non-OPEC South Asia:** East Timor, Indonesia, Malaysia, Myanmar, Papua New Guinea, Philippines, Chinese Taipei, Thailand, Vietnam.

**OPEC:** Algeria, Angola, Ecuador, Iraq, Iran, Kuwait, Libyan Arab Jamahiriya, Neutral Zone, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, Venezuela.

**Global biofuels:** Comprises all world biofuel production including Brazil and USA.

#### Tables B1 to B4: Supply of crude oil, natural gas liquids (NGL), refinery feedstocks and inputs of origin other than crude oil and NGL

Covers all flows of crude oil, NGL, refinery feedstocks and inputs with origin other than crude oil and NGL. For definitions, see section 2.1.

**Indigenous production:** All production within national boundaries including offshore production. Production only includes marketable production, excluding volumes returned to formation. Such production includes all crude oil, NGLs, condensates and inputs with origin other than crude oil and NGLs. The latter may include synthetic crude oil, oil from shale and tar sands etc. It may also include

additives/oxygenates (including biofuels) destined for blending with fuels or for fuel use.

**Backflows to refineries (returns from industry):**

These are finished or semi-finished products which are returned from final consumers to refineries for processing, blending or sale. They are usually by-products of petrochemical manufacturing. For integrated petro-chemical industries this flow could be estimated. Transfers from one refinery to another within the country are excluded.

**Transfers:** These are imported petroleum products which are reclassified as feedstocks for further processing in the refinery, without delivery to final consumers.

**Imports and exports:** Reflect amounts having crossed the national territorial (not customs) boundaries of the country whether customs clearance has taken place or not. Quantities of crude oil imported or exported under processing agreements (i.e. refining on account) is included. Crude oil and NGL are reported as coming from the country of origin; refinery feedstocks and products are reported as coming from the last country of consignment.

Re-exports of oil imported for processing within bonded areas are included as an export of product from the processing country to the final destination.

**Direct use:** Crude oil, NGL and other hydrocarbons which are used directly without being processed in oil refineries are reported as direct use. This includes, for example, crude oil burned for electricity generation. Such quantities will appear in the supply of products under “primary product receipts” in Tables B5-B13 (See notes for Tables B5-B13).

**Stock changes:** This is closing stock level minus opening stock level. A stock build is shown as a positive number, a stock draw as a negative number.

**Statistical difference:** These are the differences between refinery intake as defined by the elements above and the observed figure as reported.

**Refinery intake (observed):** Where data from special refinery surveys were available, they have been entered as observed refinery intake. This figure is defined as:

	Indigenous production
+	Backflows to refineries
+	Transfers
+	Imports
-	Exports
-	Direct use
-	Stock changes
-	Statistical difference

However, where this is not the case, the difference between what is observed and what is actually reported is statistical difference (see above).

**Definition of stocks:** All non-military stocks held by importers (including all final consumers directly refiners, Governments, major non-importing final consumers eligible under IEA/OECD commitments and by foreign entities in the following facilities: bulk terminals, refinery tanks, pipeline tankage, barges, intercoastal tankers (when port of departure and destination are in the reporting country), tankers in port (to the extent that their cargo is to be unloaded in the reporting country), and inland ship bunkers. Oil is reported regardless of the ownership of such storage facilities.

The definition above excludes oil held in pipelines, in rail tank cars, in truck tank cars, in sea going ships' bunkers, in service stations, retail stores and in tankers at sea.

**Tables B5 to B13: Supply of finished products together with crude oil and NGL which do not pass through a refinery.**

For definitions of individual products see section 2.1.

**Primary product receipts:** These concern indigenous or imported crude oil (including condensate) and indigenous NGL's which are used directly without being processed in an oil refinery.

**Gross refinery output:** This category excludes refinery losses, but includes refinery fuel. It must be equal to refinery intake (observed) minus refinery losses.

**Recycled products:** These are finished products which pass a second time through the marketing network, **after** having been once delivered to final consumers (e.g. used lubricants which are

reprocessed). These quantities should be distinguished from petrochemical backflows (see definitions).

**Refinery fuel:** Does not include products used by oil companies outside the refining process, e.g. bunkers or oil tankers.

**Imports and exports:** Definition as for Tables B1 to B4.

**International marine bunkers:** Cover the quantities of fuels delivered to sea-going ships of all flags, including warships and fishing vessels. Consumption by ships engaged in transport in inland and coastal waters is not included.

**Interproduct transfers:** These are transfers which take place *between* products. They will be products which have been re-classified for example after a blending process. A negative entry for one product is compensated for by a positive entry (or several entries) of one or several products and vice versa. The total net effect should be zero.

**Products transferred:** These are finished products which have been re-classified and returned for use in a refinery. (They are not to be confused with backflows to refineries which are quantities returned from the chemical or petro-chemical industries). Such products can be indigenous or imported. Quantities entered will always be *positive* but will be *subtracted* when calculating gross deliveries to inland consumption (see below).

**Stock changes:** Definition as for Tables B1 to B4.

**Statistical difference:** This is the difference between calculated and observed gross deliveries to inland consumption.

**Gross deliveries to inland consumption (observed):** This figure should be defined as:

	Primary product receipts
+	Refinery gross output
+	Recycled product
-	Refinery fuel
+	Imports
-	Exports
-	International marine bunkers
+	Interproduct transfers
-	Products transferred
-	Stock changes
-	Statistical difference

The observed figure may differ from the calculated figure due, for example, to differences in coverage

and/or differences of definition in different reporting systems.

**Backflows to refineries:** See definition of backflows to refineries for Tables B1 to B4. The quantity reported in Table B1 should be equal to the quantity as reported in Table B5. Those quantities of backflows used directly as finished products are included in the data reported under "backflows to refineries" of that product category from which the original input to the chemical industry came.

**Net deliveries to inland consumption:** Defined as gross deliveries to inland consumption (observed) minus backflows to refineries.

**Stocks:** Definition as for Tables B1 to B4.

## Tables C1-C6: Oil trade

**Imports and exports:** Definition as for Tables B1 and B4. Except for Section C1: 'Crude oil + NGL + refinery feedstocks' includes additives/oxygenates and hydrocarbons.

### Country groupings for trade tables

#### Imports – Crude oil, NGL, refinery feedstocks

Other Africa: Cameroon, Egypt, Tunisia, Democratic Republic of Congo.

Other Far East: Brunei, India, Papua New Guinea, Singapore.

Other Near and Middle East: Bahrain, Yemen.

Other non-OECD Europe: Bulgaria, Former Yugoslavia, Romania, other non-listed European countries.

Other Western Hemisphere: Argentina, Bahamas, Brazil, Netherland Antilles, Peru, Trinidad and Tobago.

Other import areas: Non-Specified.

#### Exports – Crude oil, NGL, refinery feedstocks

Other non-OECD Europe: Bulgaria, Former Yugoslavia, Former USSR, Romania, other non-listed European countries.

Other Africa: Algeria, Egypt, Libyan Arab Jamahiriya, South Africa, Tunisia.

Other Western Hemisphere: Argentina, Colombia, Trinidad and Tobago, Venezuela.

Other export areas: Iran, Iraq, Kuwait, Lebanon, Qatar, Saudi Arabia, Syrian Arab Republic, Other Near Middle East, India, Indonesia, Pakistan, Taiwan, Thailand, Vietnam, Other Asia, Non-Specified.

**Imports - products**

Other OPEC: Iraq, Neutral Zone.

Other Africa: Angola, Cameroon, Congo, Gabon, Tunisia, Democratic Republic of Congo.

Other Far East: Brunei, Papua New Guinea, Vietnam.

Other Near and Middle East: Bahrain, Yemen, Oman, Syrian Arab Republic.

Other non-OECD Europe: Bulgaria, Former Yugoslavia, other non-listed European countries.

Other Import Areas: Bahamas, Colombia, Ecuador, Peru, Other West Hemisphere, Non-Specified.

**Exports - products**

Other non-OECD Europe: Bulgaria, Romania, other non-listed European countries.

Other Africa: Algeria, Egypt, South Africa.

Other South and Central America: Argentina, Colombia, Trinidad and Tobago, Venezuela.

Other Far East: India, Indonesia, Pakistan, Taiwan, Thailand, Vietnam.

Other Export Areas: Iraq, Kuwait, Qatar, Saudi Arabia, Syrian Arab Republic, Other Latin, Other Near and Middle East, Non-Specified.

**5.2 Description of natural gas tables****Supply tables D**

**Indigenous production:** Dry marketable production, measured after purification and extraction of NGL's and sulphur. It does not include quantities re-injected, extraction losses, or quantities vented and flared. It includes quantities used within the natural gas industry, in gas extraction, pipeline systems and processing plants.

**Imports and exports:** Amounts are considered as imported or exported when they have crossed the political boundaries of the country, whether customs clearance has taken place or not. Imports of liquefied natural gas cover only the dry marketable equivalent after regasification.

**Stock change:** This is closing stock level minus opening stock level (stocks on national territory). A stock build is shown as a positive number, a stock draw as a negative number.

**Inland consumption (observed):** This category represents deliveries of marketable gas to the inland

market, including gas used by the gas industry for heating and operation of their equipment (i.e. consumption in gas extraction, in the pipeline system and in processing plants); losses in distribution should also be included.

**Statistical difference:** This is the difference between calculated and observed Inland Consumption.

**Stock levels:** This refers to natural gas stored in special storage facilities (depleted gas and/or oil field, aquifer, salt cavity, mixed caverns, or other) as well as liquefied natural gas storage.

**Trade tables E**

**Imports and exports:** Definition as for Tables D.

**Country groupings:****Imports**

Other Import Areas: Argentina, Bahamas, Brazil, Colombia, Ecuador, Netherlands Antilles, Peru, Venezuela, Other Latin America, Bulgaria, Romania, Former Yugoslavia, other non-listed European countries, Bahrain, Iraq, Kuwait, Neutral Zone, Yemen, Saudi Arabia, Syrian Arab Republic, Other Near Middle East, China, India, Papua New Guinea, Singapore, Vietnam, Other Asia, Angola, Cameroon, Congo, Egypt, Gabon, Tunisia, Democratic Republic of Congo, Other Africa, Non-Specified.

**Exports**

Other Export Areas: Australia, Austria, Denmark, Finland, Greece, Iceland, New Zealand, Norway, Portugal, Turkey, Argentina, Colombia, Netherlands Antilles, Trinidad and Tobago, Venezuela, Other Latin America, Bulgaria, Hungary, Romania, Former Soviet Union, other non-listed European countries, Iran, Iraq, Kuwait, Lebanon, Qatar, Saudi Arabia, Syrian Arab Republic, Other Near Middle East, China, India, Indonesia, Pakistan, Singapore, Taiwan, Thailand, Vietnam, Other Asia, Algeria, Egypt, Libyan Arab Jamahiriya, Nigeria, South Africa, Tunisia, other Africa, non-specified.

**5.3 Description of coal tables****Tables F1 and F2: World coal production**

For definitions of individual products, see section 2.3.

**Hard coal production and brown coal production:** These data include both *indigenous production* and *production from other sources*.

**Indigenous production:** The quantity of fuels extracted or produced, calculated after any operation for removal of inert matter. In general, production includes the quantities consumed by the producer in the production process (e.g. for heating or operation of equipment and auxiliaries) as well as supplies to other producers of energy for transformation or other uses.

**Production from other sources:** This covers coal from recovered slurries, middlings and other low grade coal products which cannot be classified according to type of coal from which they are obtained.

### Tables G1 to G6: World steam and coking coal trade

For definitions of individual products, see section 2.3.

Data refer to total imports and exports for the period indicated.

Amounts are considered as imported or exported when they have crossed the political boundaries of the country, whether customs clearance has taken place or not.

For geographical definitions, see above.

### Tables H1 and H2: Steam coal and coking coal trade, by origin and destination

For definitions of individual products, see section 2.3.

Data refer to imports and exports by origin and destination for the period indicated.

## 5.4 Description of electricity tables

### Tables I

**Combustible fuels:** These are sources of heat derived from the oxidation of hydrocarbons, for direct

use or for electricity generation. The term covers the usual fossil fuels (crude oil, petroleum products, natural gas, coal, peat) and some renewable and wastes (biomass, animal products, industrial waste, municipal waste). [The term “Combustible Fuels” replaces the term “Conventional Thermal” which more correctly refers to a process for the generation of electricity using working substances heated by the burning of Combustible Fuels].

**Hydro:** The electricity produced in hydro power plants. Hydro output includes output from pumped storage plants.

**Nuclear:** The electricity produced by a nuclear power plant.

**Geothermal/other:** The electricity produced from geothermal, solar, wind, tide, ocean and wave energy. Production from fuel cells is also included.

**Indigenous production:** This is the total electricity production in the country/region, calculated as the sum of production from combustible fuels, hydro, nuclear, geothermal and other sources. It includes both “main activity producers” (formerly known as public) and autoproducers.

The quarterly figure may differ from the annual figure due, for example, to differences in coverage of countries reporting systems.

**Imports:** Comprise amounts having crossed the national territorial boundaries of the country whether or not customs clearance has taken place.

**Exports:** Comprise amounts having crossed the national territorial boundaries of the country whether or not customs clearance has taken place.

**Consumption:** Calculated as the arithmetic sum of the elements shown in the rows above. This figure is often referred to as “apparent consumption”.

**Percentage change:** Change in the value for the period indicated over the previous period.

## III. COUNTRY NOTES

The following notes concern data for specific countries; group totals which include these countries will be correspondingly affected.

Please note that certain countries do not send a detailed breakdown of their oil/gas trade. The aggregate data therefore may include large quantities in the "Other Import/Export areas".

### Estimated data

#### Coal

*Hard coal production:* Italy and Turkey for some quarters (until revised to be consistent with the annual data from the *Coal Information publication*), as well as some non-OECD countries.

*Brown coal production:* Australia, Israel and Turkey for some quarters (until revised to be consistent with the annual data from the *Coal Information publication*), as well as some non-OECD countries.

*Trade:* Iceland, Israel, Mexico, New Zealand, South Korea, Switzerland, Turkey for some quarters (until revised to be consistent with the annual data from the *Coal Information publication*), as well as some Non-OECD countries, based upon coal industry publications or reports of trade partners.

#### Electricity

Australia	May and June 2011
Greece	April, May and June 2011
Ireland	June 2011
Luxembourg	June 2011
Spain	June 2011

#### Oil

##### *Data for Austria*

Most recent data are the best estimates from the Austrian national administration based on available preliminary data. Data is usually finalized within 6 months of the first publication.

##### *Data for Belgium*

Most recent data are the best estimates from the Belgian national administration based on available preliminary data. Data is usually finalized within 3 months of the first publication.

Due to modifications in reporting methodology, there is a break in series for motor gasoline stocks reported in the first half of 2009. Revisions are pending.

##### *Data for Canada*

Most recent data are the best estimates from the Canadian national administration based on available preliminary data. Data is usually finalized within 3 months of the first publication.

Due to changes in the methodology of national petroleum statistics organization, crude oil and other products closing stock levels from August 2009 onwards are estimated by the IEA. Data for crude oil stocks have been revised to incorporate changes in reporting by the national source. Revisions go back to 2000.

##### *Data for Germany*

Trade data includes transit volumes.

##### *Data for the United States*

LPG includes ethane and pentane (Table B7).

## Natural Gas

**Table D:** As some countries do not report stock levels, stock changes may not be equal to closing minus opening stocks.

### *Data for Australia*

Starting from July 2006, total exports of Natural Gas are estimated by the administration, based on annual (July to June) and quarterly data. The breakdown of export destinations is estimated by the IEA on the basis of OECD imports of Natural Gas from Australia.

### *Data for Austria*

As of January 2001, trade breakdown is no longer available due to confidentiality.

### *Data for France*

Beginning with January 2005 data, exports of natural gas include a portion of gas in transit.

### *Data for Germany*

Trade data includes transit volumes.

### *Data for Iceland*

There are no natural gas data for Iceland, as there is no production or consumption of natural gas.

### *Data for Italy*

Cushion gas is excluded from stock levels starting with October 2009, hence there is a break in stocks between September and October 2009. Historical revisions are pending.

### *Data for Luxembourg*

Between February 2002 and December 2008, the natural gas import breakdown is not available due to confidentiality.

### *Data for the Netherlands*

Between January 2005 and July 2009, natural gas trade information is published by country of physical location prior to or after crossing Dutch borders. Revisions are pending. Beginning with August 2009 data, Natural Gas trade data are reported on the basis of ultimate origin and destination.

## Coal

### *Data for Belgium*

Coal exports consist of re-exported volumes. Re-exporting increases reported imports and exports.

### *Data for Japan*

Annual imports are sourced from METI; quarterly imports are based on customs statistics (Ministry of Finance). Imports from Indonesia are classified differently by the two organisations. The split between steam coal and coking coal imports from Indonesia is estimated for some quarters. The annual data from the *Coal Information* publication revises these estimates.

### *Data for the Netherlands*

Coal exports consist of re-exported volumes. Re-exporting increases reported imports and exports.

### *Data for Spain*

In some previous quarters, sub-bituminous coal was reported in hard coal and not in brown coal. For annual data, sub-bituminous coal is reported in brown coal and not in hard coal.

### *Data for Sweden*

Some coking coal may be included in steam coal by Eurostat.

## Electricity

For detailed country notes concerning the quarterly data, please refer to the Monthly Electricity Statistics.

# Energy Data Manager / Statistician

Possible Staff Vacancies

International Energy Agency, Paris, France

## The IEA

The International Energy Agency, based in Paris, acts as energy policy advisor to 28 member countries in their effort to ensure reliable, affordable and clean energy for their citizens. Founded during the oil crisis of 1973-74, the IEA's initial role was to co-ordinate measures in times of oil supply emergencies. As energy markets have changed, so has the IEA. Its mandate has broadened to incorporate the "Three E's" of balanced energy policy making: energy security, economic development and environmental protection. Current work focuses on climate change policies, market reform, energy technology collaboration and outreach to the rest of the world, especially major consumers and producers of energy like China, India, Russia and the OPEC countries.

The Energy Statistics Division, with a staff of around 30 people, provides a dynamic environment for young people just finishing their studies or with one to two years of work experience.

## Job description

The data managers/statisticians compile, verify and disseminate information on all aspects of energy including production, transformation and consumption of all fuels, renewables, the emergency reporting system, energy efficiency indicators, CO<sub>2</sub> emissions, and energy prices and taxes. The data managers are responsible for receiving, reviewing and inputting data submissions from Member countries and other sources into large computerised databases. They check for completeness, correct calculations, internal consistency, accuracy and consistency with definitions. Often this entails proactively investigating and helping to resolve anomalies in collaboration with national administrations of Member and Non-Member countries. The data managers/statisticians also play a key role in helping to design and implement computer macros used in the preparation of their energy statistics publication(s).

## Principal Qualifications

- University degree in a topic relevant to energy, computer programming or statistics. We currently have staff with degrees in Mathematics, Statistics, Information Technology, Economics, Engineering, Physics, Chemistry, Environmental Studies, Hydrology, Public Administration and Business.
- Experience in the basic use of databases and computer software. Good computer programming skills in Visual Basic.
- Ability to work accurately, pay attention to detail and work to deadlines. Ability to deal simultaneously with a wide variety of tasks and to organise work efficiently.
- Good communication skills; ability to work well in a team and in a multicultural environment, particularly in liaising with contacts in national administrations and industry.
- Very good knowledge of one of the two official languages of the Organisation (English or French). Knowledge of other languages would be an advantage.
- Some knowledge of energy industry operations and terminology would also be an advantage, but is not required.

Nationals of any OECD Member country are eligible for appointment. Basic salaries range from 2 900 to 3 900 Euros per month, depending on qualifications. The possibilities for advancement are good for candidates with appropriate qualifications and experience. Tentative enquiries about future vacancies are welcomed from men and women with relevant qualifications and experience. Applications in French or English, accompanied by a curriculum vitae, should be sent to:

Personnel and Finance Division  
International Energy Agency  
9 rue de la Fédération  
75739 Paris Cedex 15, France  
Email: [recruitment@iea.org](mailto:recruitment@iea.org)

## On-Line Data Services

Users can instantly access not only all the data published in this book, but also all the time series used for preparing this publication and all the other statistics publications of the IEA. The data are available on-line, either through annual subscription or pay-per-view access. More information on this service can be found on our website: <http://data.iea.org>

---

## Ten Annual Publications

---

### ■ Energy Statistics of OECD Countries, 2011 Edition

No other publication offers such in-depth statistical coverage. It is intended for anyone involved in analytical or policy work related to energy issues. It contains data on energy supply and consumption in original units for coal, oil, natural gas, biofuels/waste and products derived from these primary fuels, as well as for electricity and heat. Complete data are available for 2008 and 2009 and supply estimates are available for the most recent year (*i.e.* 2010). Historical tables summarise data on production, trade and final consumption. Each issue includes definitions of products and flows and explanatory notes on the individual country data.

*Published July 2011 - Price €120*

### ■ Energy Balances of OECD Countries, 2011 Edition

A companion volume to *Energy Statistics of OECD Countries*, this publication presents standardised energy balances expressed in million tonnes of oil equivalent. Energy supply and consumption data are divided by main fuel: coal, oil, natural gas, nuclear, hydro, geothermal/solar, biofuels/waste, electricity and heat. This allows for easy comparison of the contributions each fuel makes to the economy and their interrelationships through the conversion of one fuel to another. All of this is essential for estimating total energy supply, forecasting, energy conservation, and analysing the potential for interfuel substitution. Complete data are available for 2008 and 2009 and supply estimates are available for the most recent year (*i.e.* 2010). Historical tables summarise key energy and economic indicators as well as data on production, trade and final consumption. Each issue includes definitions of products and flows and explanatory notes on the individual country data as well as conversion factors from original units to tonnes of oil equivalent.

*Published July 2011 - Price €120*

### ■ Energy Statistics of Non-OECD Countries, 2011 Edition

This publication offers the same in-depth statistical coverage as the homonymous publication covering OECD countries. It includes data in original units for more than 100 individual countries and nine main regions. The consistency of OECD and non-OECD countries' detailed statistics provides an accurate picture of the global energy situation for 2008 and 2009. For a description of the content, please see *Energy Statistics of OECD Countries* above.

*Published August 2011 - Price €120*

### ■ **Energy Balances of Non-OECD Countries, 2011 Edition**

A companion volume to the publication *Energy Statistics of Non-OECD Countries*, this publication presents energy balances in thousand tonnes of oil equivalent and key economic and energy indicators for more than 100 individual countries and nine main regions. It offers the same statistical coverage as the homonymous publication covering OECD countries, and thus provides an accurate picture of the global energy situation for 2008 and 2009. For a description of the content, please see *Energy Balances of OECD Countries* above.

*Published August 2011 - Price €120*

### ■ **Electricity Information 2011**

This reference document provides essential statistics on electricity and heat for each OECD member country by bringing together information on production, installed capacity, input energy mix to electricity and heat production, input fuel prices, consumption, end-user electricity prices and electricity trades.

*Published August 2011 - Price €150*

### ■ **Coal Information 2011**

This well-established publication provides detailed information on past and current evolution of the world coal market. It presents country-specific statistics for OECD member countries and selected non-OECD countries on coal production, demand, trade and prices. This publication represents a key reference tool for all those involved in the coal supply or consumption stream, as well as institutions and governments involved in market and policy analysis of the world coal market.

*Published August 2011 - Price €165*

### ■ **Natural Gas Information 2011**

A detailed reference work on gas supply and demand, covering not only the OECD countries but also the rest of the world. Contains essential information on LNG and pipeline trade, gas reserves, storage capacity and prices. The main part of the book, however, concentrates on OECD countries, showing a detailed gas supply and demand balance for each individual country and for the three OECD regions, as well as a breakdown of gas consumption by end-user. Import and export data are reported by source and destination.

*Published August 2011 - Price €165*

### ■ **Oil Information 2011**

A comprehensive reference book on current developments in oil supply and demand. The first part of this publication contains key data on world production, trade, prices and consumption of major oil product groups, with time series back to the early 1970s. The second part gives a more detailed and comprehensive picture of oil supply, demand, trade, production and consumption by end-user for each OECD country individually and for the OECD regions. Trade data are reported extensively by origin and destination.

*Published August 2011 - Price €165*

### ■ Renewables Information 2011

This reference document brings together in one volume essential statistics on renewables and waste energy sources. It presents a detailed and comprehensive picture of developments for renewable and waste energy sources for each of the OECD member countries, encompassing energy indicators, generating capacity, electricity and heat production from renewable and waste sources, as well as production and consumption of renewable and waste products.

*Published August 2011 - Price €110*

### ■ CO<sub>2</sub> Emissions from Fuel Combustion, 2011 Edition

In order for nations to tackle the problem of climate change, they need accurate greenhouse gas emissions data. This publication provides a basis for comparative analysis of CO<sub>2</sub> emissions from fossil fuel combustion, a major source of anthropogenic emissions. The data in this book are designed to assist in understanding the evolution of the emissions of CO<sub>2</sub> from 1971 to 2009 for more than 140 countries and regions by sector and by fuel. Emissions were calculated using IEA energy databases and the default methods and emissions factors from the *Revised 1996 IPCC Guidelines for National Greenhouse Gas Inventories*.

*Published November 2011 - Price €165*

---

## Two Quarterlies

---

### ■ Oil, Gas, Coal and Electricity, Quarterly Statistics

This publication provides up-to-date, detailed quarterly statistics on oil, coal, natural gas and electricity for the OECD countries. Oil statistics cover production, trade, refinery intake and output, stock changes and consumption for crude oil, NGL and nine selected oil product groups. Statistics for electricity, natural gas and coal show supply and trade. Import and export data are reported by origin and destination. Moreover, oil as well as hard coal and brown coal production are reported on a worldwide basis.

*Published Quarterly - Price €120, annual subscription €380*

### ■ Energy Prices and Taxes

This publication responds to the needs of the energy industry and OECD governments for up-to-date information on prices and taxes in national and international energy markets. It contains prices at all market levels for OECD countries and certain non-OECD countries: import prices, industry prices and consumer prices. The statistics cover the main oil products, natural gas, coal and electricity, giving for imported products an average price both for importing country and country of origin. Every issue includes full notes on sources and methods and a description of price mechanisms in each country.

*Published Quarterly - Price €120, annual subscription €380*

## Electronic Editions

---

### ■ CD-ROMs and Online Data Services

To complement its publications, the Energy Statistics Division produces CD-ROMs containing the complete databases which are used for preparing the statistics publications. State-of-the-art software allows you to access and manipulate all these data in a very user-friendly manner and includes graphic facilities. These databases are also available on the internet from our online data service.

#### Annual CD-ROMS / Online Databases

- |   |                                    |
|---|------------------------------------|
| ■ Energy Statistics of OECD Countries, 1960-2010            | Price: €550 (single user)          |
| ■ Energy Balances of OECD Countries, 1960-2010              | Price: €550 (single user)          |
| ■ Energy Statistics of Non-OECD Countries, 1971-2009        | Price: €550 (single user)          |
| ■ Energy Balances of Non-OECD Countries, 1971-2009          | Price: €550 (single user)          |
| ■ <i>Combined subscription of the above four series</i>     | <i>Price: €1 400 (single user)</i> |
| ■ Electricity Information 2011                              | Price: €550 (single user)          |
| ■ Coal Information 2011                                     | Price: €550 (single user)          |
| ■ Natural Gas Information 2011                              | Price: €550 (single user)          |
| ■ Oil Information 2011                                      | Price: €550 (single user)          |
| ■ Renewables Information 2011                               | Price: €400 (single user)          |
| ■ CO <sub>2</sub> Emissions from Fuel Combustion, 1971-2009 | Price: €550 (single user)          |

#### Quarterly CD-ROMs / Online Databases

- |                           |   |
|---------------------------|---|
| ■ Energy Prices and Taxes | Price: (four quarters) €900 (single user) |
|---------------------------|---|

A description of these services are available on our website: <http://data.iea.org>

## Other Online Services

---

### ■ The Monthly Oil Data Service

The IEA Monthly Oil Data Service provides the detailed databases of historical and projected information which is used in preparing the IEA's monthly *Oil Market Report* (OMR). The IEA Monthly Oil Data Service comprises three packages available separately or combined as a subscriber service on the Internet. The data are available at the same time as the official release of the Oil Market Report.

The packages include:

- |                                       |                                    |
|---------------------------------------|------------------------------------|
| ■ Supply, Demand, Balances and Stocks | Price: €6 000 (single user)        |
| ■ Trade                               | Price: €2 000 (single user)        |
| ■ Field-by-Field Supply               | Price: €3 000 (single user)        |
| ■ <i>Complete Service</i>             | <i>Price: €9 000 (single user)</i> |

A description of this service is available on our website: <http://www.iea.org/stats/mods.asp>

## ■ The Monthly Gas Data Service

The service provides monthly natural gas data for OECD countries:

- supply balances in terajoules and cubic metres;
- production, trade, stock changes and levels where available, gross inland deliveries, own use and losses;
- highly detailed trade data with about 50 imports origins and exports destinations;
- LNG trade detail available from January 2002.

The databases cover the time period January 1984 to current month with a time lag of two months for the most recent data.

- Monthly Gas Data Service: Natural Gas Balances & Trade  
*Historical plus 12 monthly updates* Price: €800 (single user)

For more information consult: <http://data.iea.org>

**Moreover, the IEA statistics website contains key energy indicators by country, graphs on the world and OECD's energy situation evolution from 1971 to the most recent year available, as well as selected databases for demonstration.**

**The IEA statistics website can be accessed at [www.iea.org/statistics/](http://www.iea.org/statistics/)**
