

EDUCATION AT A GLANCE 2016

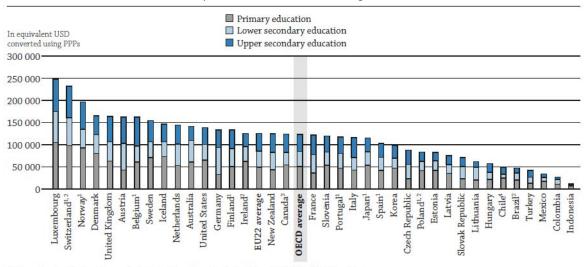

Education at a Glance: OECD Indicators is the authoritative source for information on the state of education around the world. It provides data on the structure, finances and performance of education systems in the 35 OECD countries and a number of partner countries.

Switzerland

- Swiss graduation rates from upper secondary vocational programmes are among the highest of all OECD countries. Young adults in Switzerland also choose school- and work-based programmes at upper secondary level at a higher rate than the OECD average.
- Women in the labour force earn less than men with the same education attainment although the difference varies with their level of educational attainment, and the average gender gap in earnings is lower in Switzerland than the OECD average.
- The share of secondary teachers over 60 has increased in Switzerland at the same rate as the OECD average but the share of teachers over 50 has increased faster.
- Teachers' starting salaries in Switzerland rank second highest of all countries with available data. This is true from pre-primary to upper secondary levels. However, they increase more slowly over the course of teachers' careers than the average among OECD countries.
- In 2013, public expenditure on primary to tertiary educational institutions accounted for 14.9% of Switzerland's total public expenditure, the fourth highest share among OECD countries

Figure 1. Cumulative expenditure per student by educational institutions over the expected duration of primary and secondary studies (2013)

Annual expenditure on educational institutions per student multiplied by the theoretical duration of studies, in equivalent USD converted using PPPs

- 1. Some levels of education are included with others. Refer to "x" code in Table B1.1 for details.
- 2. Public institutions only.
- 3. Year of reference 2012 for expenditure per student.
- 4. Year of reference 2014 for expenditure per student.

Countries are ranked in descending order of the total expenditure by educational institutions per student over the theoretical duration of primary and secondary

Vocational education and training can provide more direct pathways into the labour market

- Vocational programmes at the upper secondary level (*Berufliche Grundbildung / formation professionnelle initiale*) are quite popular in Switzerland. Graduation rates from these programmes were over 70% in 2014.
- Although the distribution of expenditure between general and vocational education is the same in Switzerland as
 the OECD average (52% for vocational and 48% for general programmes), Switzerland spends almost twice as
 much per student for both programmes than the average across OECD countries. On average, Switzerland
 spends USD 18 855 a year per student in upper secondary vocational programmes and USD 17 530 per student in
 general programmes.
- Vocational education combining school- and work-based programmes is more popular among students in Switzerland than in any other OECD country. On average, 36% of young adults between 15 and 19 years old are enrolled in school- and work-based programmes, while the share is just 7% on average in OECD countries.
- Switzerland has one of the highest employment rates among OECD countries for 25-34 year-olds with a vocational education qualification, at 89%. This is the same employment rate as for those with a tertiary degree, whereas for those with an upper secondary general qualification as their highest level of education the rate is 80%.

Gender gaps in education and employment persist

- In contrast to general trends across OECD countries, women do not make up the majority of new entrants into bachelor's and master's programmes in Switzerland. The share of female new entrants is 6 percentage points below the OECD average for both levels: 48% compared to 54% for bachelor's programmes; 50% compared to 56% for master's.
- Women remain under-represented in science, technology, engineering and mathematics (STEM) fields at tertiary level. Only 17% of new entrants into the field of engineering, manufacturing and construction are women, below the OECD average of 24%. Just 33% of female new entrants study sciences, compared to 37% among OECD countries. In common with all OECD and partner countries, men are under-represented in the field of health and welfare as well as the field of education where they make up 26% and 28% of students respectively.
- The gender distribution of teachers across levels of education in Switzerland follows the same pattern as the OECD average: women comprise the majority of teachers at lower levels of education and the minority at tertiary level. For early childhood education, 97% of teachers are women, falling to 82% at primary level, closely matching the OECD averages. At lower secondary level, female teachers are still the majority at 54%, but not to the same extent as on average across OECD countries (68%). At upper secondary level, the gender distribution of teachers is the reverse of the OECD average: 43% are women compared with 58% among OECD countries. At tertiary level, only 34% of teachers in Switzerland are women compared to an OECD average of 43%.
- There is a gender gap between men and women's earnings for all levels of educational attainment for which data are available. Women in Switzerland with upper secondary education as their highest level of attainment earn 18% less than similarly-educated men. Among tertiary-educated workers, the difference is even greater: female workers earn 21% less than their male counterparts. In both cases, however, the gender gap is narrower than the OECD average of 22% for upper secondary and 27% for tertiary-educated workers.

Salary, the school environment and workload all influence teachers' decisions to enter – and remain in – the profession

- Similar to the trend in many OECD countries, the teaching workforce in Switzerland is ageing: in 2005, 5% of secondary teachers were over 60, increasing to 9% in 2014, the same as the OECD average. Furthermore, 38% of secondary teachers were over 50 in 2014, comparable to the OECD (37%) and EU22* (39%) averages.
- Teachers' statutory starting salaries in Switzerland are among the highest of all countries with available data:
 USD 47 641 at pre-primary level, USD 52 863 at primary, USD 60 231 at lower secondary and USD 67 483 at upper secondary. In comparison, the average starting salary at lower secondary level was USD 32 485 across OECD

© OECD 2016

¹ Note that the figures for Switzerland take only public institutions into account and that they also include post-secondary non-tertiary education and short-cycle tertiary programmes.

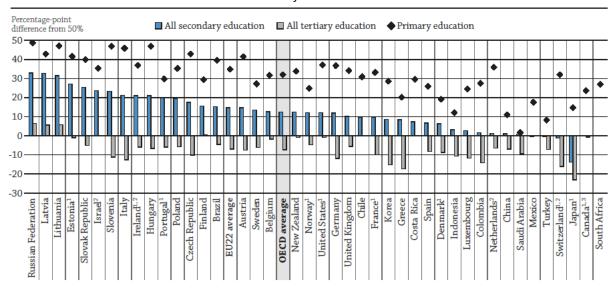

² Values reported in equivalent US dollars (USD) have been converted using purchasing power parities (PPPs).

countries. With these relatively high starting salaries come lower relative increases at the top of the scale: 53% in Switzerland, less than the average among OECD countries.

• Despite these high salaries relative to other OECD teachers, Swiss teachers at lower education levels earn less than other tertiary-educated workers. Primary and lower secondary teachers with 15 years of experience earn on average 83% and 95% of what other tertiary-educated professionals earn respectively. At upper secondary level, however, teachers earn 9% more than their peers compared with 4% less on average among OECD countries.

Figure 2. Gender distribution of teachers

Percentage point difference from 50% for share of women among teaching staff in public and private institutions, by level of education

How to read this figure

The zero line represents a 50-50 gender ratio for teachers in a given education level. Points above zero mean there is a higher share of female teachers and points below zero mean there is a higher share of male teachers. For example, in Slovenia, 97% of teachers in primary education are female, and the same is true for 73% of teachers at secondary and only 39% at the tertiary level.

- 1. Some levels of education are included with others. Please refer to "x" code in Table D5.3 for details.
- 2. Public institutions only. For the Netherlands, private data are available and included for pre-primary education. For Israel, private data are available and included in all levels except for pre-primary and upper secondary.
- 3. Year of reference 2013.

Countries are ranked in descending order of the percentage of female teachers at the secondary level.

 $\textbf{Source:} \ OECD. \ Table \ D5.3. \ See \ Annex \ 3 \ for \ notes \ (\underline{www.oecd.org/education/education-at-a-glance-19991487.htm}).$

StatLink fis http://dx.doi.org/10.1787/888933399207

High-quality education needs sustainable funding

- In 2013, public expenditure on primary to tertiary educational institutions accounted for 14.9% of Switzerland's total public expenditure, the fourth highest share among OECD countries, behind Chile, Mexico and New Zealand. This corresponds to 4.8% of Swiss gross domestic product (GDP), the same as the OECD average.
- Between 2008 and 2013, total public expenditure on primary to tertiary education increased by 14%. Given that total public expenditure increased by 9% in the same period, education's share of total public expenditure increased by 4%.
- Switzerland's annual expenditure per student in public institutions from primary to tertiary level was USD 19 052 in 2013, but spending varied significantly across the different levels of education. Expenditure per student at the tertiary level was USD 25 126, 58% higher than at the primary level, and expenditure at the secondary level was nearly 20% higher than in primary: USD 18 944 versus USD 15 930 respectively.
- Because the cantons have authority over the main part of the education system, the funding of education in Switzerland is highly decentralised, especially at the tertiary level. After transfers of funds between levels of government, 81% of funds to tertiary education come from regional authorities. Together with Spain, Switzerland has the highest share of final funds to tertiary level covered by regional governments.
