

WHAT IS THE STUDENT-TEACHER RATIO AND HOW BIG ARE CLASSES?

This indicator examines the number of students per class at the primary and lower secondary levels, and the ratio of students to teaching staff at all levels; it distinguishes between public and private institutions. Class size and student-teacher ratios are much discussed aspects of the education students receive and – along with the total instruction time of students (see Indicator D1), teachers’ average working time (see Indicator D4) and the division of teachers’ time between teaching and other duties – are among the determinants of the size of the teaching force within countries.

Key results

Chart D2.1. Average class size in primary education (2000, 2005)

1. Public institutions only.

2. Years of reference 2001 and 2005.

Countries are ranked in descending order of average class size in primary education.

Source: OECD, 2005 data: Table D2.1, present edition. 2000 data: Table D2.1, *Education at a Glance 2002*.

See Annex 3 for notes (www.oecd.org/edu/eqg2007).

StatLink <http://dx.doi.org/10.1787/068464517374>

Other highlights of this indicator

- The average class size in lower secondary education is 24 students per class, but varies from 30 or more in Japan, Korea and Mexico and the partner economies Brazil, Chile and Israel to 20 or less in Denmark, Iceland, Ireland (public institutions), Luxembourg and Switzerland, and the partner economy the Russian Federation.
- The number of students per class increases by an average of nearly three students between primary and lower secondary education, but ratios of students to teaching staff tend to decrease with increasing levels of education due to more annual instruction time, though this pattern is not uniform among countries.
- On average across OECD countries, the availability of teaching resources relative to student numbers in secondary education is more favourable in private institutions than in public institutions. This is most striking in Mexico where, at the secondary level, there are around 14 more students per teacher in public institutions than there are in private institutions. Consistently, at the lower secondary level, there is one student more per class on average across OECD countries in public institutions than in private institutions.

INDICATOR D2

Policy context

Class size, education quality and education systems

Class size is a hotly debated topic and an important aspect of education policy in many OECD countries. Smaller classes are often perceived to allow teachers to focus more on the individual needs of students and reduce the amount of class time teachers spend dealing with disruptions. Smaller class sizes may also influence parents when they choose schools for their children. In this respect, class size would be an indicator of the quality of the school system.

Yet evidence on the effects of variations in class size upon student performance is very mixed. In what has evolved as a contentious area of research that has produced little in the way of consistent results, there is some evidence that smaller classes may have an impact upon specific groups of students (*e.g.* disadvantaged students).

A further reason why there is mixed evidence on the impact of class size may be because there is not sufficient variation in class size to estimate the true effects of this variable on student performance. In addition, policies to group lower performing students into smaller classes in order to devote more attention to them may reduce the observed performance gains that may otherwise be expected from smaller classes. Finally, the fact that the relationship between class size and student performance is often non-linear makes the effects difficult to estimate.

Numerous factors influence the interaction between teachers and students with class size being just one of them. Other influences include the number of classes or students for which a teacher is responsible, the subject taught, the division of the teacher's time between teaching and other duties, the grouping of students within classes and the practice of team-teaching.

The ratio of students to teaching staff is also an important indicator of the resources devoted to education. A smaller ratio of students to teaching staff may have to be weighted against higher salaries for teachers, increased professional development and teacher training, greater investment in teaching technology, or more widespread use of assistant teachers and other paraprofessionals whose salaries are often considerably lower than those of qualified teachers. Moreover, as larger numbers of children with special educational needs are integrated into normal classes, more use of specialised personnel and support services may limit the resources available for reducing the ratio of students to teaching staff.

The ratio of students to teaching staff is obtained by dividing the number of full-time equivalent students at a given level of education by the number of full-time equivalent teachers at that level and in similar types of institutions. However, this ratio does not take into account instruction time compared to the length of a teacher's working day nor how much time teachers spend teaching and therefore it cannot be interpreted in terms of class size (Box D2.1).

Evidence and explanations

Average class size in primary and lower secondary education

At the primary level, the average class size across OECD countries is 22 students per class, but varies widely among countries. It ranges from 33 students per primary class in Korea to fewer than 20 in Denmark, Greece, Iceland, Italy, Luxembourg, Mexico, Portugal, the Slovak Republic and Switzerland and partner economies Estonia, the Russian Federation and Slovenia. At the lower

secondary level, the average class size across OECD countries is 24 students per class and varies from 36 students per class in Korea to fewer than 20 in Denmark, Iceland, Ireland (public institutions), Luxembourg and Switzerland and the partner economy the Russian Federation (Table D2.1).

Box D2.1. Relationship between class size and ratio of students to teaching staff

The number of students per class results from a number of different elements: the ratio of students to teaching staff, the number of classes or students for which a teacher is responsible, the instruction time of students compared to the length of teachers' working days, the proportion of time teachers spend teaching, the grouping of students within classes and team teaching.

For example, in a school of 48 full-time students and 8 full-time teachers, the ratio of students to teaching staff equals 6. If teachers' working week is estimated to be 35 hours including 10 hours teaching, and if instruction time for each student is 40 hours per week, then whatever the grouping of students in this school, average class size can be estimated as follows:

Estimated class size = 6 students per teacher * (40 hours of instruction time per student / 10 hours of teaching per teacher) = 24 students.

Compared to this estimated figure, class size presented in Table D2.1 is defined as the division of students who are following a common course of study, based on the highest number of common courses (usually compulsory studies), and excludes teaching in sub-groups. Thus, the estimated class size will be close to the average class size of Table D2.1 where teaching in sub-groups is less frequent (as is the case in primary and lower secondary education).

Because of these definitions, similar student-to-teacher ratios between countries can lead to different class sizes. For example, in lower-secondary education, Germany and Greece have very similar average class sizes (24.7 students in Germany and 24.5 students in Greece – see Table D2.1), but the ratio of students to teaching staff differs substantially with 15.5 students per teaching staff member in Germany compared to 7.9 in Greece (see Table D2.2). The explanation for this may lie in the higher number of teaching hours required for teachers in Germany compared to Greece (758 hours in Germany compared to 583 hours in Greece – see Table D4.1).

The number of students per class tends to increase, on average, by nearly three students between primary and lower secondary education. In Austria, Greece, Japan, Mexico, Poland and Portugal, and the partner economies Brazil and Israel, the increase in average class size exceeds four students, while Switzerland and the United Kingdom show a small drop in the number of students per class between these two levels (Chart D2.2). The indicator on class size is limited to primary and lower secondary education because class sizes are difficult to define and compare at higher levels of education, where students often attend several different classes, depending on the subject area.

Between 2000 and 2005, average class size in primary education did not vary significantly (21.5 in 2005 against 22.0 in 2000). However, among countries with comparable data, class size decreased in countries among those with larger class sizes in 2000 (Korea, Japan and Turkey), whereas class size increased (or stayed constant) in countries among those with the lowest class sizes in 2000 (Iceland, Italy and Luxembourg). At secondary level of education, variations in class sizes between 2000 and 2005 follow a similar trend leading to narrowing the range of class sizes (2000 data in *Education at a Glance 2002*, Table D2.1 available on line at: www.oecd.org/edu/eaq2002).

Chart D2.2. Average class size in educational institutions, by level of education (2005)

1. Public institutions only.

Countries are ranked in descending order of average class size in lower secondary education.

Ratio of students to teaching staff

In primary education, the ratio of students to teaching staff, expressed in full-time equivalents, ranges from equal to or more than 26 students per teacher in Korea, Mexico, Turkey and partner economy Chile to less than 11 in Hungary, Italy and Portugal. The OECD average in primary education is 17 students per teacher (Chart D2.3).

There is similar variation among countries in the ratio of students to teaching staff at the secondary level, ranging from 31 students per full-time equivalent teacher in Mexico to less than 11 in Austria, Belgium, Greece, Italy, Luxembourg, Portugal and Spain. On average among OECD countries, the ratio of students to teaching staff at the secondary level is 13, which is close to the ratios in Australia (12), the Czech Republic (13), Finland (14), France (12), Japan (14), Poland (13), the Slovak Republic (14), Sweden (13) and the United Kingdom (14), and the partner economies Israel (13) and Slovenia (13) (Table D2.2).

As the difference in the mean ratios of students to teaching staff between primary and secondary education indicates, there are fewer full-time equivalent students per full-time equivalent teacher in higher levels of education. The ratio of students to teaching staff decreases between primary and secondary levels of education, despite a tendency for class sizes to increase. This was found to be true in all but seven OECD countries (Hungary, Italy, Mexico, the Netherlands, Poland, Sweden and the United States, and the partner economy Chile).

Chart D2.3. Ratio of students to teaching staff in educational institutions, by level of education (2005)

Note: Please refer to the Reader's Guide for list of country codes and country names used in this chart.

Countries are ranked in descending order of number of students per teacher in primary education.

Source: OECD, Table D2.2. See Annex 3 for notes (www.oecd.org/edu/eag2007).

StatLink <http://dx.doi.org/10.1787/068464517374>

The decrease in the ratio of students to teaching staff from the primary to the secondary level reflects differences in annual instruction time, which tend to increase with the level of education. It may also result from delays in matching the teaching force to demographic changes, or from differences in teaching hours for teachers at different levels. The general trend is consistent among countries, but it is not obvious from an educational perspective why a smaller ratio of students to teaching staff should be more desirable at higher levels of education (Table D2.2).

The ratios of students to teaching staff in pre-primary education are shown in Table D2.2. For the pre-primary level, information is also presented on the ratio of students to contact staff (teachers and teachers' aides). Some countries make extensive use of teachers' aides at the pre-primary level. Eight OECD countries and two partner economies reported smaller ratios of students to contact staff (column 1 of Table D2.2) than students to teaching staff. For countries such as the Slovak Republic, Sweden and the United Kingdom, this difference is not substantial. But in Austria, France, Germany, Japan and the United States as well as in partner economies Chile and Israel and there are larger numbers of teachers' aides. The use of these staff means that student to contact staff ratios are substantially lower than student to teacher ratios particularly in France and partner economy Israel.

At the tertiary level, the ratio of students to teaching staff ranges from 30 students per teacher in Greece to 11 or below in Iceland, Japan, Spain and Sweden (Table D2.2). Such comparisons in tertiary education, however, should be made with caution since it is still difficult to calculate full-time equivalent students and teachers on a comparable basis at this level.

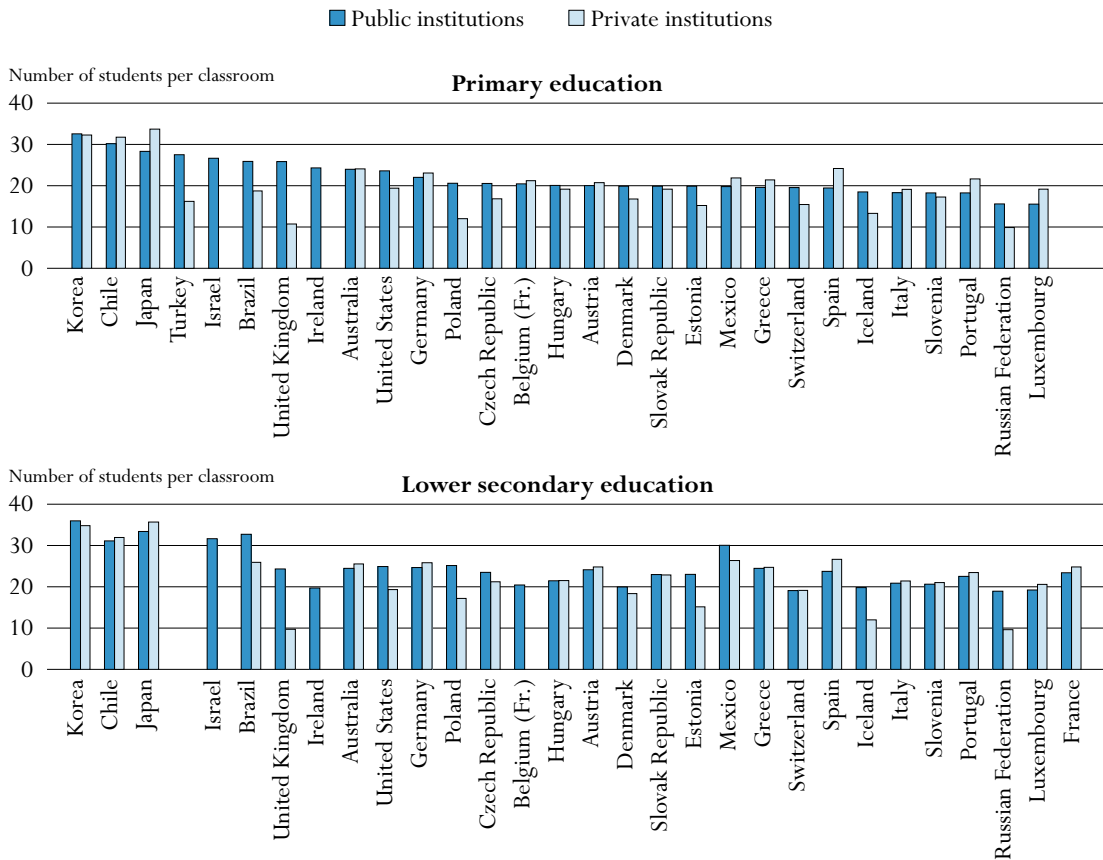

In 12 out of the 15 OECD countries and partner economies with comparable data, the ratio of students to teaching staff is lower in the more occupationally specific tertiary-type B programmes than in tertiary-type A and advanced research programmes (Table D2.2). Hungary, the Slovak Republic and Turkey are the only countries with a higher ratio in tertiary-type B programmes.

Teaching resources in public and private institutions

Table D2.3 focuses on the secondary level and illustrates the comparative provision of teaching resources between public and private institutions by examining the ratio of students to teaching staff between the two types of providers. On average across the OECD countries (and also in partner economies) for which there are data, there are smaller ratios of students to teaching staff in private institutions at both lower secondary and upper secondary levels, with just over than one more student per teacher in public institutions than in private institutions. The most striking examples of this are Mexico and the United Kingdom where, at the lower secondary level, there are at least 11 more students per teacher in public institutions than in private institutions. The difference in Mexico at the upper secondary level is similarly large. But this is not true in all countries.

Smaller ratios of students to teaching staff in the public sector relative to the private sector are evident in some countries. This is most pronounced in Spain at the lower secondary level where there are some 16 students per teacher in private institutions compared with only 11 students per teacher in public institutions.

In terms of average class size (Chart D2.4 and Table D2.1), on average across the OECD countries for which there are data, average class sizes do not differ between public and private institutions

Chart D2.4. Average class size in public and private institutions by level of education (2005)

Countries are ranked in descending order of number of students per classroom in public institutions in primary education.

StatLink  <http://dx.doi.org/10.1787/068464517374>

from more than 1-2 students per class for primary and lower secondary education. However, this trend disguises marked variation between countries. At the primary level, in the Czech Republic, Iceland, Poland, Switzerland, Turkey, the United Kingdom and the United States, and in partner economies Brazil, Estonia and the Russian Federation, for example, average class sizes in public institutions are notably higher – four students or more per class – though in all these countries except partner economy Brazil, the private sector is small (at most 5% of students at the primary level). In contrast, class sizes in private institutions exceed those in public institutions to a similar degree or larger in Japan, Luxembourg and Spain.

The class size comparison between public and private institutions also shows a mixed picture at the lower secondary level, where private education is more prevalent. Lower-secondary average class sizes are larger in private institutions than in public institutions in 11 OECD countries and 2 partner economies, though differences tend to be smaller than is the case in primary education.

There are numerous reasons why countries encourage public and private school sectors. In many countries, a rationale for encouraging growth in both sectors is to facilitate school choice. That is, to broaden the choices available to students and families in their schooling. Considering the

importance of class size in discussions of schooling in many countries, differences in class size between public and private schools and institutions may be a driver of differences in enrolment between these sectors. It is interesting to note that in the OECD countries and partner economies with a substantial private sector in primary and lower secondary education (Australia, Belgium [Fr.], Denmark, Korea, and Luxembourg and the partner economy Chile; see Table C2.9), there are, on average, only marginal differences in class size between public and private institutions. Where large differences do exist, they tend to show private institutions having more students per class than public institutions. This indicates that in countries where a substantial proportion of students and families have decided to choose private education institutions, class size would not be a major determinant of those decisions.

Definitions and methodologies

Data refer to the school year 2004-2005, and are based on the UOE data collection on education statistics that is administered annually by the OECD.

Class sizes have been calculated by dividing the number of students enrolled by the number of classes. In order to ensure comparability among countries, special needs programmes have been excluded. Data include only regular programmes at primary and lower secondary levels of education and exclude teaching in sub-groups outside the regular classroom setting.

The ratio of students to teaching staff has been calculated by dividing the number of full-time equivalent students at a given level of education by the number of full-time equivalent teachers at that level and in the specified type of institution.

The breakdown of the ratio of students to teaching staff by type of institution distinguishes between students and teachers in public institutions and in private institutions (government-dependent private institutions and independent private institutions). In some countries the proportion of students in private institutions is small (see Table C2.9).

Instructional personnel:

- Teaching staff refers to professional personnel directly involved in teaching students. The classification includes classroom teachers; special education teachers; and other teachers who work with a whole class of students in a class, in small groups in a resource room, or in one-to-one teaching situations inside or outside a regular class. Teaching staff also includes department chairpersons whose duties include some teaching, but excludes non-professional personnel who support teachers in providing instruction to students, such as teachers' aides and other paraprofessional personnel.
- Teachers' aides and teaching/research assistants include non-professional personnel or students who support teachers in providing instruction to students.

1. Includes only general programmes in lower and upper secondary education.

2. Upper secondary includes post-secondary non-tertiary education.

3. Lower secondary includes primary education.

4. Upper secondary education includes programmes from post-secondary education.

5. Upper secondary education includes tertiary-type B education.

6. Includes only general programmes in upper secondary education.

READER'S GUIDE

Coverage of the statistics

Although a lack of data still limits the scope of the indicators in many countries, the coverage extends, in principle, to the entire national education system (within the national territory) regardless of the ownership or sponsorship of the institutions concerned and regardless of education delivery mechanisms. With one exception described below, all types of students and all age groups are meant to be included: children (including students with special needs), adults, nationals, foreigners, as well as students in open distance learning, in special education programmes or in educational programmes organised by ministries other than the Ministry of Education, provided the main aim of the programme is the educational development of the individual. However, vocational and technical training in the workplace, with the exception of combined school and work-based programmes that are explicitly deemed to be parts of the education system, is not included in the basic education expenditure and enrolment data.

Educational activities classified as “adult” or “non-regular” are covered, provided that the activities involve studies or have a subject matter content similar to “regular” education studies or that the underlying programmes lead to potential qualifications similar to corresponding regular educational programmes. Courses for adults that are primarily for general interest, personal enrichment, leisure or recreation are excluded.

Calculation of international means

For many indicators an OECD average is presented and for some an OECD total.

The OECD average is calculated as the unweighted mean of the data values of all OECD countries for which data are available or can be estimated. The OECD average therefore refers to an average of data values at the level of the national systems and can be used to answer the question of how an indicator value for a given country compares with the value for a typical or average country. It does not take into account the absolute size of the education system in each country.

The OECD total is calculated as a weighted mean of the data values of all OECD countries for which data are available or can be estimated. It reflects the value for a given indicator when the OECD area is considered as a whole. This approach is taken for the purpose of comparing, for example, expenditure charts for individual countries with those of the entire OECD area for which valid data are available, with this area considered as a single entity.

Note that both the OECD average and the OECD total can be significantly affected by missing data. Given the relatively small number of countries, no statistical methods are used to compensate for this. In cases where a category is not applicable (code “a”) in a country or where the data value is negligible (code “n”) for the corresponding calculation, the value zero is imputed for the purpose of calculating OECD averages. In cases where both the numerator and the denominator of a ratio are not applicable (code “a”) for a certain country, this country is not included in the OECD average.

For financial tables using 1995 data, both the OECD average and OECD total are calculated for countries providing both 1995 and 2004 data. This allows comparison of the OECD average and OECD total over time with no distortion due to the exclusion of certain countries in the different years.

For many indicators an EU19 average is also presented. It is calculated as the unweighted mean of the data values of the 19 OECD countries that are members of the European Union for which data are available or can be estimated. These 19 countries are Austria, Belgium, the Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Italy, Ireland, Luxembourg, the Netherlands, Poland, Portugal, the Slovak Republic, Spain, Sweden and the United Kingdom.

■ **Classification of levels of education**

The classification of the levels of education is based on the revised International Standard Classification of Education (ISCED-97). The biggest change between the revised ISCED and the former ISCED (ISCED-76) is the introduction of a multi-dimensional classification framework, allowing for the alignment of the educational content of programmes using multiple classification criteria. ISCED is an instrument for compiling statistics on education internationally and distinguishes among six levels of education. The glossary available at www.oecd.org/edu/eag2007 describes in detail the ISCED levels of education, and Annex 1 shows corresponding typical graduation ages of the main educational programmes by ISCED level.

■ **Symbols for missing data**

Six symbols are employed in the tables and charts to denote missing data:

- a* Data is not applicable because the category does not apply.
- c* There are too few observations to provide reliable estimates (*i.e.* there are fewer than 3% of students for this cell or too few schools for valid inferences). However, these statistics were included in the calculation of cross-country averages.
- m* Data is not available.
- n* Magnitude is either negligible or zero.
- w* Data has been withdrawn at the request of the country concerned.
- x* Data included in another category or column of the table (*e.g.* *x*(2) means that data are included in column 2 of the table).
- ~ Average is not comparable with other levels of education.

■ **Further resources**

The website www.oecd.org/edu/eag2007 provides a rich source of information on the methods employed for the calculation of the indicators, the interpretation of the indicators in the respective national contexts and the data sources involved. The website also provides access to the data underlying the indicators as well as to a comprehensive glossary for technical terms used in this publication.

Any post-production changes to this publication are listed at www.oecd.org/edu/eag2007.

The website www.pisa.oecd.org provides information on the OECD Programme for International Student Assessment (PISA), on which many of the indicators in this publication draw.

Education at a Glance uses the OECD's StatLinks service. Below each table and chart in *Education at a Glance 2007* is a url which leads to a corresponding Excel workbook containing the underlying data for the indicator. These urls are stable and will remain unchanged over time. In addition, readers of the *Education at a Glance* e-book will be able to click directly on these links and the workbook will open in a separate window.

Codes used for territorial entities

These codes are used in certain charts. Country or territorial entity names are used in the text. Note that in the text the Flemish Community of Belgium is referred to as "Belgium (Fl.," and the French Community of Belgium as "Belgium (Fr.)."

AUS Australia	ITA Italy
AUT Austria	JPN Japan
BEL Belgium	KOR Korea

TABLE OF CONTENTS

	Name of the indicator in the 2006 edition
Foreword	3
Editorial	11
Introduction	15
Reader's Guide	19
CHAPTER A THE OUTPUT OF EDUCATIONAL INSTITUTIONS AND THE IMPACT OF LEARNING	23
Indicator A1 To what level have adults studied?	24
Table A1.1.a. Educational attainment: adult population (2005).....	36
Table A1.2.a. Population that has attained at least upper secondary education (2005).....	37
Table A1.3.a. Population that has attained tertiary education (2005).....	38
Table A1.4. Fields of education (2004)	39
Table A1.5. Ratio of 25-to-34-year-olds with ISCED 5A and 30-to-39-year-olds with ISCED 6 levels of education to 55-to-64-year-olds with ISCED 5A and 6 levels of education, by fields of education (2004).....	40
Indicator A2 How many students finish secondary education?	42
Table A2.1. Upper secondary graduation rates (2005)	50
Table A2.2. Trends in graduation rates at upper secondary level (1995-2005).....	51
Table A2.3. Post-secondary non-tertiary graduation rates (2005)	52
Indicator A3 How many students finish tertiary education?	54
Table A3.1. Graduation rates in tertiary education (2005).....	67
Table A3.2. Trends in tertiary graduation rates (1995-2005).....	68
Table A3.3. Percentage of tertiary graduates, by field of education (2005)	69
Table A3.4. Science graduates, by gender (2005).....	70
Table A3.5. Relationship between motivation in mathematics at 15 years old (PISA 2003) and tertiary-type A graduation rates, by gender	71
Table A3.6. Survival rates in tertiary education (2004).....	72
Indicator A4 What are students' expectations for education?	74
Table A4.1.a. Percentage of students expecting to complete different levels of education (2003).....	84
Table A4.2.a. Percentage of students expecting to complete ISCED levels 5A or 6, by mathematics performance level (2003).....	85
Table A4.3.a. Percentage of students expecting to complete ISCED levels 5A or 6, by gender (2003).....	86
Table A4.4. Odds ratios that students expect to complete ISCED levels 5A or 6, by socio-economic status (2003).....	87
Table A4.5. Odds ratios that students expect to complete ISCED levels 5A or 6, by immigrant status (2003).....	88

Indicator A5	What are students' attitudes towards mathematics?	90
Table A5.1.	Means on students' attitudes towards mathematics, approaches to learning, and school-related indices (2003).....	99
Table A5.2a.	Relationship between students' attitudes towards mathematics and mathematics performance (2003).....	100
Table A5.2b.	Relationship between students' approaches to learning and mathematics performance (2003).....	101
Table A5.2c.	Relationship between school-related indices and mathematics performance (2003).....	102
Indicator A6	What is the impact of immigrant background on student performance?	104
Table A6.1a.	Differences in mathematics performance, by immigrant status (2003)....	113
Table A6.2a.	Percentage of native students at each level of proficiency on the mathematics scale (2003).....	113
Table A6.2b.	Percentage of second-generation students at each level of proficiency on the mathematics scale (2003).....	114
Table A6.2c.	Percentage of first-generation students at each level of proficiency on the mathematics scale (2003).....	114
Table A6.3.	Index of instrumental motivation in mathematics and student performance on the mathematics scale (2003).....	115
Indicator A7	Does the socio-economic status of their parents affect students' participation in higher education?	116
Indicator A8	How does participation in education affect participation in the labour market?	124
Table A8.1a.	Employment rates and educational attainment, by gender (2005).....	132
Table A8.2a.	Unemployment rates and educational attainment, by gender (2005)....	134
Table A8.3a.	Trends in employment rates, by educational attainment (1991-2005)...	136
Table A8.4a.	Trends in unemployment rates by educational attainment (1991-2005).....	138
Indicator A9	What are the economic benefits of education?	140
Table A9.1a.	Relative earnings of the population with income from employment (2005 or latest available year).....	156
Table A9.1b.	Differences in earnings between females and males (2005 or latest available year).....	158
Table A9.2a.	Trends in relative earnings: adult population (1997-2005).....	159
Table A9.3.	Trends in differences in earnings between females and males (1997-2005).....	160
Table A9.4a.	Distribution of the 25-to-64-year-old population by level of earnings and educational attainment (2005 or latest available year).....	162
Table A9.5.	Private internal rates of return for an individual obtaining an upper secondary or post-secondary non-tertiary education, ISCED 3/4 (2003).....	165
Table A9.6.	Private internal rates of return for an individual obtaining a university-level degree, ISCED 5/6 (2003).....	165

A8

A9

		Name of the indicator in the 2006 edition
Table A9.7.	Public internal rates of return for an individual obtaining an upper secondary or post-secondary non-tertiary education, ISCED 3/4 (2003).....	166
Table A9.8.	Public internal rates of return for an individual obtaining a university-level degree, ISCED 5/6 (2003).....	166
CHAPTER B FINANCIAL AND HUMAN RESOURCES INVESTED IN EDUCATION		
Indicator B1 How much is spent per student?		B1
Table B1.1a.	Annual expenditure on educational institutions per student for all services (2004).....	186
Table B1.1b.	Annual expenditure per student on core services, ancillary services and R&D (2004).....	187
Table B1.2.	Distribution of expenditure (as a percentage) on educational institutions compared to number of students enrolled at each level of education (2004).....	188
Table B1.3a.	Cumulative expenditure on educational institutions per student for all services over the theoretical duration of primary and secondary studies (2004).....	189
Table B1.3b.	Cumulative expenditure on educational institutions per student for all services over the average duration of tertiary studies (2004).....	190
Table B1.4.	Annual expenditure on educational institutions per student for all services relative to GDP per capita (2004).....	191
Table B1.5.	Change in expenditure on educational institutions for all services per student relative to different factors, by level of education (1995, 2004).....	192
Indicator B2 What proportion of national wealth is spent on education?		B2
Table B2.1.	Expenditure on educational institutions as a percentage of GDP, by levels of education (1995, 2000, 2004).....	205
Table B2.2.	Expenditure on educational institutions as a percentage of GDP, by level of education (2004).....	206
Table B2.3.	Change in expenditure on educational institutions (1995, 2000, 2001, 2002, 2003, 2004).....	207
Table B2.4.	Expenditure on educational institutions as a percentage of GDP, by source of fund and level of education (2004).....	208
Indicator B3 How much public and private investment is there in education?		B3
Table B3.1.	Relative proportions of public and private expenditure on educational institutions for all levels of education (1995, 2004).....	219
Table B3.2a.	Relative proportions of public and private expenditure on educational institutions, as a percentage, by level of education (1995, 2004).....	220
Table B3.2b.	Relative proportions of public and private expenditure on educational institutions, as a percentage, for tertiary education (1995, 2004).....	221
Table B3.3.	Trends in relative proportions of public expenditure on educational institutions and index of change between 1995 and 2004 (1995=100, constant prices), for tertiary education (1995, 2000, 2001, 2002, 2003, 2004).....	222

Indicator B4	What is the total public spending on education?	224	B4
Table B4.1.	Total public expenditure on education (1995, 2004).....	230	
Table B4.2.	Distribution of total public expenditure on education (2004).....	231	
Indicator B5	How much do tertiary students pay and what public subsidies do they receive?	232	B5
Table B5.1a.	Estimated annual average tuition fees charged by tertiary-type A educational institutions for national students (academic year 2004-2005).....	244	
Table B5.1b.	Distribution of financial aid to students in tertiary-type A education (academic year 2004-2005).....	246	
Table B5.1c.	Financial support to students through public loans in tertiary-type A education (academic year 2004-2005).....	248	
Table B5.2.	Public subsidies for households and other private entities as a percentage of total public expenditure on education and GDP, for tertiary education (2004).....	250	
Indicator B6	On what resources and services is education funding spent? ...	252	B6
Table B6.1.	Expenditure on institutions by service category as a percentage of GDP (2004).....	260	
Table B6.2.	Expenditure on educational institutions by resource category and level of education (2004).....	261	
Indicator B7	How efficiently are resources used in education?	262	
Table B7.1.	Estimates of technical efficiency for primary and lower secondary public sector education	268	
CHAPTER C	ACCESS TO EDUCATION, PARTICIPATION AND PROGRESSION	269	
Indicator C1	How prevalent are vocational programmes?	270	
Table C1.1.	Upper secondary enrolment patterns (2005).....	277	
Table C1.2.	Annual expenditure on educational institutions per student for all services, by type of programme (2004).....	278	
Table C1.3.	Performance of 15-year-old students on the PISA mathematics scale by programme orientation (2003).....	279	
Indicator C2	Who participates in education?	280	C1, C2
Table C2.1.	Enrolment rates, by age (2005).....	291	
Table C2.2.	Trends in enrolment rates (1995-2005).....	292	
Table C2.3.	Transition characteristics from age 15 to 20, by level of education (2005).....	293	
Table C2.4.	Entry rates to tertiary education and age distribution of new entrants (2005).....	294	
Table C2.5.	Trends in entry rates at the tertiary level (1995-2005).....	295	
Table C2.6.	Students in tertiary education by type of institution or mode of study (2005).....	296	
Indicator C3	Who studies abroad and where?	298	C3
Table C3.1.	Student mobility and foreign students in tertiary education (2000, 2005).....	317	

		Name of the indicator in the 2006 edition
Table C3.2.	Distribution of international and foreign students in tertiary education, by country of origin (2005).....	318
Table C3.3.	Citizens studying abroad in tertiary education, by country of destination (2005).....	320
Table C3.4.	Distribution of international and foreign students in tertiary education, by level and type of tertiary education (2005).....	322
Table C3.5.	Distribution of international and foreign students in tertiary education, by field of education (2005).....	323
Table C3.6.	Trends in the number of foreign students enrolled outside their country of origin (2000 to 2005).....	324
Table C3.7.	Percentage of tertiary qualifications awarded to international and foreign students, by type of tertiary education (2005).....	325
Indicator C4	How successful are students in moving from education to work?	C4
Table C4.1a.	Expected years in education and not in education for 15-to-29-year-olds (2005).....	335
Table C4.2a.	Percentage of the youth population in education and not in education (2005).....	337
Table C4.3.	Percentage of the cohort population not in education and unemployed (2005).....	339
Table C4.4a.	Trends in the percentage of the youth population in education and not in education (1995-2005).....	341
Indicator C5	Do adults participate in training and education at work?	C5
Table C5.1a.	Participation rate and expected number of hours in non-formal job-related education and training, by level of educational attainment (2003).....	353
Table C5.1b.	Expected number of hours in non-formal job-related education and training by age group and labour force status (2003).....	355
Table C5.1c.	Expected number of hours in non-formal job-related education and training, by level of educational attainment (2003).....	357
 CHAPTER D THE LEARNING ENVIRONMENT AND ORGANISATION OF SCHOOLS		
		359
Indicator D1	How much time do students spend in the classroom?	D1
Table D1.1.	Compulsory and intended instruction time in public institutions (2005).....	369
Table D1.2a.	Instruction time per subject as a percentage of total compulsory instruction time for 9-to-11-year-olds (2005).....	370
Table D1.2b.	Instruction time per subject as a percentage of total compulsory instruction time for 12-to-14-year-olds (2005).....	371
Indicator D2	What is the student-teacher ratio and how big are classes?	D2
Table D2.1.	Average class size, by type of institution and level of education (2005).....	381
Table D2.2.	Ratio of students to teaching staff in educational institutions (2005).....	382
Table D2.3.	Ratio of students to teaching staff, by type of institution (2005).....	383

Indicator D3	How much are teachers paid?	384	D3
Table D3.1.	Teachers' salaries (2005).....	396	
Table D3.2.	Change in teachers' salaries (1996 and 2005).....	398	
Table D3.3a.	Adjustments to base salary for teachers in public institutions (2005).....	399	
Table D3.4.	Contractual arrangements of teachers (2005).....	401	
Indicator D4	How much time do teachers spend teaching?	402	D4
Table D4.1.	Organisation of teachers' working time (2005).....	411	
Indicator D5	How do education systems monitor school performance?	412	
Table D5.1.	Evaluation of public schools at lower secondary education (2005).....	418	
Table D5.2.	Use of information from school evaluation and accountability of public schools (lower secondary education, 2005).....	419	
ANNEX 1	Characteristics of Educational Systems	421	
Table X1.1a.	Typical graduation ages in upper secondary education.....	422	
Table X1.1b.	Typical graduation ages in post-secondary non-tertiary education.....	423	
Table X1.1c.	Typical graduation ages in tertiary education.....	424	
Table X1.2a.	School year and financial year used for the calculation of indicators, OECD countries.....	425	
Table X1.2b.	School year and financial year used for the calculation of indicators, partner economies.....	426	
Table X1.3.	Summary of completion requirements for upper secondary (ISCED 3) programmes.....	427	
ANNEX 2	Reference Statistics	429	
Table X2.1.	Overview of the economic context using basic variables (reference period: calendar year 2004, 2004 current prices).....	430	
Table X2.2.	Basic reference statistics (reference period: calendar year 2004, 2004 current prices).....	431	
Table X2.3.	Basic reference statistics (reference period: calendar year 1995, 1995 current prices).....	432	
Table X2.4.	Annual expenditure on educational institutions per student for all services (2004, USD).....	433	
Table X2.5.	Annual expenditure on educational institutions per student for all services (2004, EUR).....	434	
Table X2.6a.	Reference statistics used in the calculation of teachers' salaries, by level of education (1996, 2005).....	435	
Table X2.6b.	Reference statistics used in the calculation of teachers' salaries (1996, 2005).....	437	
Table X2.6c.	Teachers' salaries (2005).....	438	
Table X2.7.	Tax revenue of main headings as percentage of GDP (2004).....	439
