## **ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT**

Pursuant to Article 1 of the Convention signed in Paris on 14th December 1960, and which came into force on 30th September 1961, the Organisation for Economic Co-operation and Development (OECD) shall promote policies designed:

- to achieve the highest sustainable economic growth and employment and a rising standard of living in Member countries, while maintaining financial stability, and thus to contribute to the development of the world economy;
- to contribute to sound economic expansion in Member as well as non-member countries in the process of economic development; and
- to contribute to the expansion of world trade on a multilateral, non-discriminatory basis in accordance with international obligations.

The original Member countries of the OECD are Austria, Belgium, Canada, Denmark, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. The following countries became Members subsequently through accession at the dates indicated hereafter: Japan (28th April 1964), Finland (28th January 1969), Australia (7th June 1971), New Zealand (29th May 1973), Mexico (18th May 1994), the Czech Republic (21st December 1995), Hungary (7th May 1996), Poland (22nd November 1996), Korea (12th December 1996) and the Slovak Republic (14th December 2000). The Commission of the European Communities takes part in the work of the OECD (Article 13 of the OECD Convention).

## **ORGANISATION DE COOPÉRATION ET DE DÉVELOPPEMENT ÉCONOMIQUES**

En vertu de l'article 1<sup>er</sup> de la Convention signée le 14 décembre 1960, à Paris, et entrée en vigueur le 30 septembre 1961, l'Organisation de Coopération et de Développement Économiques (OCDE) a pour objectif de promouvoir des politiques visant :

- à réaliser la plus forte expansion de l'économie et de l'emploi et une progression du niveau de vie dans les pays Membres, tout en maintenant la stabilité financière, et à contribuer ainsi au développement de l'économie mondiale ;
- à contribuer à une saine expansion économique dans les pays Membres, ainsi que les pays non membres, en voie de développement économique ;
- à contribuer à l'expansion du commerce mondial sur une base multilatérale et non discriminatoire conformément aux obligations internationales.

Les pays Membres originaires de l'OCDE sont : l'Allemagne, l'Autriche, la Belgique, le Canada, le Danemark, l'Espagne, les États-Unis, la France, la Grèce, l'Irlande, l'Islande, l'Italie, le Luxembourg, la Norvège, les Pays-Bas, le Portugal, le Royaume-Uni, la Suède, la Suisse et la Turquie. Les pays suivants sont ultérieurement devenus Membres par adhésion aux dates indiquées ci-après : le Japon (28 avril 1964), la Finlande (28 janvier 1969), l'Australie (7 juin 1971), la Nouvelle-Zélande (29 mai 1973), le Mexique (18 mai 1994), la République tchèque (21 décembre 1995), la Hongrie (7 mai 1996), la Pologne (22 novembre 1996), la Corée (12 décembre 1996) et la République slovaque (14 décembre 2000). La Commission des Communautés européennes participe aux travaux de l'OCDE (article 13 de la Convention de l'OCDE).

# INTRODUCTION

*The Monthly Statistics of International trade publication is the most up-to-date source of foreign trade data of OECD Member countries. This publication is divided into four parts: calculated aggregates and indicators (Part 1), derived indices (Part 2), trade by SITC sections (Part 3), and more detailed trade by partner countries (Part 4).*

*The annex of this publication contains OECD's geographical nomenclature, country-specific notes and exchange rates.*

*A CD-ROM version of this publication gives all available and publishable detail of series. It also provides longer time series.*

*Data presented are less detailed than the annual statistics included in the paper publication "International Trade by Commodity Statistics", which provides full detail by commodity as well as by partner country. A CD-ROM version of this publication is also available.*

*The OECD now publishes data received directly from the Statistical Office of the European Communities (Eurostat) under the names **EU15 – Extra EU and EUR-12 Extra EU 12** (for Euro area), which excludes Intra-EU trade. (cf definitions: Differences between OECD statistics and Community statistics of Eurostat.)*

## **Part 1: Aggregate trade indicators**

This part gives values of trade, for each OECD Member country. The series are shown both before and after adjustment for seasonal variations. These adjustments are made by the Secretariat using the **X-12** method developed by the U.S. Bureau of Census. Values for groups of countries are adjusted directly. Therefore they do not equal the sum of the adjusted series for constituent countries.

This publication also contains calculated indicators, such as net trade and coverage ratios.

## **Part 2: Volume and unit value indices**

There is considerable variation between countries in the amount of detail provided and in the classifications used. For some countries, the latest indices are not yet available. Unit value indices reflect changes in the commodity composition of trade as well as pure price movement. A few countries publish price indices which eliminate the effect of change in trade composition.

*La publication de Statistiques Mensuelles du Commerce International est la source la plus récente de données sur les échanges internationaux des pays Membres de l'OCDE. Cette publication est divisée en quatre parties : les agrégats calculés et les indicateurs (Partie 1), les indices (Partie 2), le commerce par section de la CTCI (Partie 3), et le commerce plus détaillé par pays partenaires (Partie 4).*

*L'annexe de cette publication contient la nomenclature géographique de l'OCDE, les notes spécifiques par pays et les taux de change.*

*Une version CD-ROM de cette publication donne tout le détail publiable et disponible des séries sur une plus longue période temporelle.*

*Les données présentées sont moins détaillées que les données annuelles de la publication "Statistiques du commerce international par produit", qui montrent un très grand niveau de détail aussi bien par produit que par pays partenaire. Une version en CD-ROM est également disponible.*

*L'OCDE publie maintenant sous les noms de **UE15 – Extra UE ET** et de **EUR 12 Extra EU12** (pour l'Euro zone) des données reçues directement de l'Office Statistique des Communautés Européennes (Eurostat) pour lesquelles le commerce intra-UE est exclu. (cf définition: Différences entre les données statistiques de l'OCDE et celles de la communauté statistique d'Eurostat.)*

## **Partie 1 : Indicateurs agrégés du commerce international**

Dans cette partie les valeurs des échanges sont montrées pour chaque pays Membre. Les séries sont publiées à la fois avant et après ajustements des variations saisonnières. Le secrétariat a calculé les ajustements en utilisant la méthode **X-12** mise au point par le Bureau of Census des États-Unis. Les données des groupes de pays résultent d'un calcul direct et différent donc du total des séries ajustées pour les pays composants.

Cette publication contient également des indicateurs calculés tels que : le solde commercial et les taux de couverture.

## **Partie 2 : Indices de volume et de valeur unitaire**

Entre pays, il existe une très grande différence dans le détail fourni ainsi que dans les classifications utilisées. Pour certains pays, les indices les plus récents ne sont pas encore disponibles. Les indices de valeur unitaire reflètent aussi bien les changements dans la composition en produits que dans la variation de prix. Quelques pays publient des indices de prix qui éliminent les effets des variations dans la composition du commerce.

Unless otherwise stated, volume and price indices are base-weighted (Laspeyre); unit value indices are current weighted (Paasche).

Compared with the previous version, this part has been improved in two respects:

- First, raw headings are in line with the SNA nomenclature to facilitate comparisons between countries.

- Second a consistent methodology has been applied to link indices: the first value of the latest available time series is used to derive the coefficient applied to chain the latest series with the previous one.

### **Part 3: Trade by SITC sections**

This part provides data on each country's trade classified by five major group of commodities, based on the sections of the Standard International Trade Classification (SITC):

1. Food, live animals, beverages and tobacco (SITC sections 0+1);
2. Crude materials, inedible, animal and vegetable oils and fats (SITC sections 2+4);
3. Mineral fuels, lubricants and related materials (SITC section 3);
4. Chemicals, manufactured goods classified chiefly by material, miscellaneous manufactured articles (SITC sections 5+6+8+9);
5. Machinery and transport equipment (SITC section 7).

### **Part 4: Foreign trade of OECD Member countries by partner countries**

The fourth part of this publication provides data on trade of Member countries and groups of Member countries with partner countries and groups of partner countries.

Economic groupings have been added to geographical groupings. The exact composition of groupings can be found in the Annex under the heading "OECD Geographical Nomenclature." It takes into account the most recent changes in country names and / or groups.

As the CD-ROM version of this publication provides full coverage by partner countries as well as longer time series, the number of partner countries shown in this publication has been reduced in order to improve the readability.

Sauf indication contraire, les indices de volume et de prix sont à pondération fixe (Laspeyre); ceux de valeur unitaire, à pondération mobile (Paasche).

En comparaison avec la version précédente, deux améliorations majeures ont été faites:

- Premièrement, les titres des séries ont été homogénéisées en suivant la nomenclature du SNA, afin de faciliter les comparaisons entre pays.

- Deuxièmement, une méthodologie cohérente sur la liaison des indices a été appliquée: la première valeur de la série temporelle la plus récente est utilisée comme lien avec la série antérieure.

### **Partie 3 : Commerce par sections de la CTCI**

Cette partie fournit les données sur le commerce de chaque pays selon cinq grands groupes de produits, en se basant sur les sections de la Classification Type du Commerce International (CTCI):

1. Produits alimentaires, animaux vivants, boissons et tabac (CTCI sections 0+1);
2. Matières brutes non comestibles, huiles et graisses d'origine animale ou végétale (CTCI sections 2+4);
3. Combustibles minéraux, lubrifiants et produits connexes (CTCI section 3);
4. Produits chimiques, articles manufacturés classés principalement d'après la matière première, articles divers (CTCI sections 5+6+8+9);
5. Machines et matériel de transport (CTCI section 7).

### **Partie 4 : Commerce des pays Membres de l'OCDE par pays partenaires**

La quatrième partie de cette publication fournit des données sur le commerce des pays Membres et de groupes de pays Membres avec les pays partenaires ou des groupes de pays partenaires.

Des groupes économiques ont été ajoutés aux groupes géographiques. La composition exacte de tous ces groupes est présentée dans "la Nomenclature Géographique de l'OCDE" située en annexe. Elle tient compte des changements les plus récents dans les noms des pays et / ou les groupes.

Comme la version sur CD-ROM de cette publication couvre tous les pays partenaires et des séries temporelles plus longues, le nombre de pays partenaires présentés dans la publication a été réduit pour assurer une meilleure lisibilité.

# DEFINITIONS - DÉFINITIONS

The following definitions apply throughout this publication. For exceptions, please refer to the country notes at the end of this volume.

Following the UN recommendations defined by the Economic and Social Council of the Statistical Commission of the United Nations in “*International Merchandise Trade Statistics: Concepts and Definitions (1998)*”, the international merchandise trade statistics record all goods which add to or subtract from the stock of material resources of a country by entering (imports) or leaving (exports) its economic territory. Goods simply being transported through a country (goods in transit) or temporarily admitted or withdrawn (except for goods for inward or outward processing) do not add to or subtract from the stock of material resources of a country and are not included in the international merchandise trade statistics.

Customs records should be the main source of the data; and the additional sources could be used where customs sources are not available. Goods should be included in statistics at the time when they enter or leave the economic territory of a country. In the case of customs-based data collection systems, the time of recording should be the date of lodgement of the customs declaration

Lists of goods to be included, to be recorded separately and to be excluded should be provided. Specific goods are to be excluded from detailed international merchandise trade statistics but recorded separately in order to derive totals of international merchandise trade for national accounts and balance of payments purposes.

## Trade system

There are two trade systems in common use by which international merchandise trade statistics are compiled: general trade system and special trade system. The United Nations recommendations advise using the general trade system that provides a more comprehensive recording of external trade flows than does the special system. It also provides a better approximation of the change of ownership criterion used in the 1993 SNA and BPM5.

*General trade* includes all goods that cross the national frontier including goods that are imported into and exported from custom-bonded warehouses and free zones. The general trade system is in use when the statistical territory of a country coincides with its economic territory so that imports include all goods entering the economic territory of a compiling country and exports include all goods leaving the economic territory of a compiling country.

En principe, les définitions suivantes s'appliquent à l'ensemble de la série. Pour les exceptions, voir les notes par pays en fin de volume.

Suivant les recommandations des Nations Unies, défini par le Conseil économique et social de la Commission statistique des Nations Unies : “*Statistiques du commerce international de marchandises : Concepts et définitions (1998)*” les statistiques du commerce international de marchandise couvrent tous les biens qui, du fait de leur entrée (importations) ou de leur sortie (exportations), s'ajoutent aux ressources d'un pays ou les diminuent. Les biens simplement transportés à travers un pays (biens en transit) ou temporairement admis ou retirés (à l'exception des biens pour transformation en entrée ou en sortie) ne s'ajoutent pas aux ressources d'un pays et ne sont pas inclus dans les statistiques du commerce international.

Les déclarations douanières doivent être la source principale des données ; les sources additionnelles peuvent être utilisées quand les données douanières ne sont pas disponibles. Les biens doivent être inclus dans les statistiques à la date d'entrée ou de sortie du territoire économique d'un pays. Dans le cas des systèmes de collecte de données basées sur les douanes, la date d'enregistrement devrait être la date du dépôt de la déclaration en douane.

Les listes des biens à inclure et des biens enregistrés séparément ainsi que la liste des biens à exclure doivent être fournies. Des biens spécifiques doivent être exclus des données détaillées du commerce international mais enregistrés séparément afin d'en dériver les totaux du commerce international de marchandise pour les besoins des comptes nationaux et de la balance des paiements.

## Système du commerce

Deux systèmes de commerce sont utilisés communément pour compiler les statistiques du commerce international de marchandises : le système du commerce général et le système du commerce spécial. Les recommandations des Nations Unies conseillent d'utiliser le système du commerce général qui fournit un enregistrement plus complet des flux du commerce extérieur que celui du commerce spécial. Il fournit également une meilleure approximation du critère de changement de propriétaire utilisé dans le SNA 1993 et BPM5.

Le *commerce général* comprend toutes les marchandises traversant la frontière nationale y compris les marchandises entrant et sortant des entrepôts en douane et des zones franches. Le système du commerce général est utilisé quand le territoire statistique d'un pays coïncide avec son territoire économique si bien que les importations comprennent tous les biens entrant dans le territoire économique et les exportations comprennent tous les biens quittant le territoire économique d'un pays.

*Special trade* covers goods that cross the customs frontier plus goods that are imported into and exported from custom-bonded areas. The special trade system is in use when the statistical territory comprises only a particular part of the economic territory.

### Coverage of trade

The data cover all goods which add to, or subtract from, the resources of a country as a result of their movement into or out of the country. The following types of goods are therefore included or excluded :

Goods to be included in the detailed international trade statistics:

- Non-monetary gold; goods traded on government account; food and other humanitarian aid; goods for military use; goods on consignment; goods used as carriers of information and software (CD-ROM, diskettes); goods for processing; returned goods; electricity, gas and water; goods under financial lease; ships, aircraft and other mobile equipment; sea products landed direct from the high seas.

Goods to be excluded in the detailed international trade statistics:

- Monetary gold, direct transit trade, temporary imports and exports, transactions in second-hand ships and aircraft, stores and bunkers for ships and aircraft; goods treated as part of trade in services; goods for repair.

### Methodology

Trade data collected by OECD mostly follow the UN recommendations. Furthermore, in European countries, two systems of data collection coexist, i.e. Extra-stats and Intrastat. Extra-EU trade statistics record movable property imported and exported by the EU Member country from and to countries outside the European community. Intra-EU trade statistics include the arrival and dispatch of movable property within the European community as recorded by each Member state of the EU.

### Intrastat

The advent of the Single Market 1 January 1993, with its removal of customs formalities (the traditional source of statistical data) between Member States leads to the adoption of a specially designed collection system, Intrastat, for statistics on intra-Community trade.

These changes necessitate greater vigilance on the part of statistical users because they obviously affect the nature, quality and coverage of the data. In particular, the introduction of Intrastat in 1993 involved a methodological break with the past and affected the quality of the statistics.

*Le commerce spécial* couvre les marchandises traversant la frontière douanière, y compris celles qui sont importées et exportées des zones sous contrôle douanier. Le système du commerce spécial est utilisé quand le territoire statistique ne comprend qu'une partie spécifique du territoire économique.

### Couverture du commerce

Les données couvrent tous les biens qui, du fait de leur entrée ou de leur sortie, s'ajoutent aux ressources d'un pays ou les diminuent. Il en résulte les inclusions et les exclusions suivantes :

Biens à inclure dans les statistiques détaillées du commerce international :

- l'or non monétaire, l'aide humanitaire et alimentaire, le commerce à des fins militaires, les biens en consignation, les biens utilisés comme porteurs d'informations et de logiciels (CD-ROM, disquettes), marchandises en transformations, les biens en retour, l'énergie électrique, le gaz et l'eau; les transactions, biens en crédits-bails, les produits de la mer débarqués en provenance directe de la haute mer.

Biens à exclure des statistiques détaillées du commerce international :

- l'or monétaire, le trafic de transit direct, les importations et les exportations temporaires, les transactions portant sur les navires et les aéronefs usagés, l'avitaillement et les soutages pour navires et aéronefs ; biens en réparation.

### Méthodologie

Les données collectées par l'OCDE suivent pour la plupart les recommandations des Nations Unies. Par ailleurs, dans les pays européens deux systèmes de collecte de données coexistent : Extra-stats et Intrastat. La statistique du commerce extra-UE comptabilise les biens mobiliers importés et exportés d'un pays Membre de l'Union Européenne avec les pays non-membres de l'UE. La statistique du commerce intra-UE comptabilise les arrivées et les expéditions de biens mobiliers enregistrées par chaque état membre de l'UE.

### Intrastat

La réalisation du marché unique au 1er janvier 1993, avec l'abandon des formalités douanières entre les états membres, source traditionnelle de l'information statistique, a conduit à la mise en place d'un système de collecte spécifique, nommé INTRASTAT, pour la statistique des échanges intra-communautaires.

Ces changements rendent nécessaire une plus grande vigilance des utilisateurs de statistiques car ils ont naturellement un impact sur la nature des données collectées, leur qualité et la couverture des échanges. L'introduction d'Intrastat en 1993, en particulier, a entraîné une rupture méthodologique par rapport à la situation préexistante et altérée la qualité des statistiques.

## Differences between OECD statistics and Community statistics of Eurostat

The *Monthly Statistics of International Trade* now publishes data received directly from the Statistical Office of the European Communities (EUROSTAT) under the name EU15-Extra EU and EU12-Extra EU which excludes intra EU-trade.

As the example below shows, Community statistics, which cover the European Union as a whole, and the statistics compiled by the EU Member States and sent to OECD, which are concerned with the national dimension, are not always directly comparable. There can be methodological differences, which make precise comparison of these statistics impossible.

The principal differences are as follows:

### - Breakdown by partner country

For arrivals of goods from other EU Member States, certain EU Member States record the country of origin as the partner country in their national statistics, whereas it is the EU Member State of consignment that appears in the Community statistics relating to the same goods movement.

### - Treatment of goods in transit

Some EU Member States, particularly Belgium and the Netherlands do not record goods, which they consider to be 'in transit'. This covers, firstly, the import of goods from non-member countries which are customs cleared in these EU Member States before being dispatched on to other EU Member States and, secondly, goods from other EU Member States which are then immediately re-exported to non-member countries.

These goods are normally recorded for Community Statistics purposes under intra- or extra-EU trade, as appropriate. This phenomenon is known as the 'Rotterdam effect'

### - Other differences

Other methodological differences can cause discrepancies between national and Community statistics (for example: classification at national level as 'general trade' rather than 'special trade', or not recording 'repairs' on the grounds that they are considered as services).

## Différences entre les données statistiques de l'OCDE et celles de la communauté statistique d'Eurostat

Les *Statistiques mensuelles du commerce international* publie maintenant sous le nom de l'UE15-Extra-UE et UE12-Extra EU, des données reçues directement de l'Office Statistique des Communautés Européennes (Eurostat) pour lesquelles le commerce intra-UE est exclu.

En effet comme l'illustre l'exemple ci-après, la statistique communautaire, qui prend en compte le commerce de l'Union dans son ensemble, et les statistiques de chaque état membre, qui s'intéressent à la dimension nationale, ne sont pas toujours directement comparables. Il peut exister en effet des différences d'ordre méthodologique qui ne permettent pas une correspondance exacte entre ces statistiques.

Les principales différences sont définies comme suit :

### - ventilation par pays partenaire

Pour les arrivées de marchandises en provenance d'autres états membres de l'UE, certains états membres de l'UE enregistrent comme pays partenaire, dans leurs statistiques nationales, le pays d'origine des marchandises alors que c'est l'état membre de l'UE de provenance qui apparaît dans les statistiques communautaires pour les mêmes échanges.

### - traitement des échanges en «transit»

Certains états membres de l'UE, en particulier les Pays-Bas, ne prend pas en compte, au plan national, les échanges considérés comme des cas de «transit». Il s'agit d'une part des importations de marchandises tierces qui sont dédouanées dans ces états membres de l'UE avant d'être expédiées à destination d'autres états membres de l'UE et d'autre part des arrivées en provenance d'autres états membres de l'UE de marchandises qui sont immédiatement exportées à destination de pays tiers.

Ces échanges sont normalement enregistrés pour les besoins de la statistique communautaire, au titre de la statistique du commerce intra-UE ou extra-UE selon le cas. On qualifie ce phénomène d'«effet Rotterdam».

### - autres différences

D'autres différences méthodologiques peuvent introduire un biais entre les statistiques nationales et communautaires (exemples: application, au plan national, du commerce «général» au lieu du commerce «spécial» ou non-comptabilisation des «réparations», considérées comme des opérations de service).

## Geographical classification

The geographical classification refers to areas of origin (or country of consignment) for imports and areas of consumption (last known destination) for exports. The statistical territory of these countries is defined in the *OECD Geographical Nomenclature*, in the annex.

From the September 1999 issue, the Belgium-Luxembourg Economic Union has been replaced by separate data for Belgium and Luxembourg in the compilation of the reporting zones OECD-TOTAL, OECD-EUROPE, EU-15, and EU-12.

All area totals include intra-area trade.

## Valuation

Values are expressed in million United States dollars (USD) and refer to declared transaction values (imports c.i.f., exports f.o.b.). The IMF monthly average conversion rates from national currencies into United States dollars are indicated in the annex.

From 1 January 1999, the conversion rates for the Euro-zone countries from national currencies into USD are calculated using the Euro/USD exchange rate and the fixed Euro/national currency exchange rates. The Euro-zone was then enlarged to include Greece on 1 January 2001.

Data published are expressed as monthly averages. Quarterly and most annual data are calculated as averages of monthly figures. Following revisions, some annual data may have to be derived independently and may therefore not strictly correspond to relevant average of monthly figures.

## Classification géographique

La ventilation géographique se réfère aux régions d'origine pour les importations et de consommation (dernière destination connue) pour les exportations. Le territoire statistique de ces pays est défini dans la *Nomenclature géographique de l'OCDE*, figurant en annexe.

A partir de la publication de septembre 1999, le calcul des zones déclarantes OCDE-TOTAL, OCDE-EUROPE, UE-15 et UE-12 inclut les données de la Belgique et du Luxembourg, et non plus celles de l'Union Économique Belgo-Luxembourgeoise.

Les totaux par groupes de pays incluent le commerce intra-groupe.

## Valeurs

Les valeurs sont exprimées en millions de dollars des États-Unis (USD), sur la base des valeurs de transactions déclarées (importations C.A.F., exportations f.a.b.). Les taux mensuels moyens du FMI, utilisés pour convertir les valeurs nationales en dollars des États-Unis sont indiqués en annexe.

Depuis le premier janvier 1999, les taux pour les pays de la zone-Euro utilisés pour convertir les valeurs nationales en USD sont calculés à partir du taux de change Euro/USD et des taux de change fixes Euro/monnaie nationale. La zone-Euro comprend la Grèce à partir de 1 janvier 2001.

## UNITED STATES

### Sources:

US Dept. of Commerce. Bureau of Labour.

### System of trade:

General trade.

### Valuation

For exports, values are f.a.s. (free alongside ship) point of shipment. For imports, customs value in the country of origin is reported.

### Special remarks:

- Carry-over procedure: in order to obtain earlier release dates, a number of shipments are regularly carried over to succeeding month's statistics. The amount on this carry-over is reported to be relatively stable from month to month.
- Special category commodities: for a number of commodities, destinations are kept secret for security reasons. These special categories are included in exports to the world and in *Unspecified*, but not in data relating to individual countries or area.
- Trade with Midway, Wake, Guam, Canton and Enderberry Islands, American Samoa, Arctic and Antarctic region, is not covered by these statistics.

## AUSTRALIA

### Statistical territory:

Excluding Nauru, New Guinea (Eastern), Papua, Norfolk, Cocos and Christmas Island.

### System of trade:

General trade.

### Valuation:

For imports, the market value in the country of origin is shown whenever this is greater than the actual transaction values.

### Coverage:

- Gold for industrial use is *included* in the exports. The following items are *excluded* from the statistics:
- Certain materials for use in national defence.
  - Ships and aircraft for use in foreign trade.
  - Sea products exported direct from the high seas.

## ÉTATS-UNIS

### Sources :

US Dept. of Commerce. Bureau of Labour.

### Nature du commerce :

Commerce général.

### Valeurs déclarées :

Les exportations sont déclarées f.a.s. (franco le long du navire) point d'embarquement. Pour les importations, les valeurs déclarées sont les valeurs douanières dans le pays d'origine.

### Observations particulières :

- Procédure de report : afin de raccourcir les délais de publication, un certain nombre de mouvements effectués dans le mois sont régulièrement reportés au mois suivant. Le montant total du report peut être considéré comme relativement stable d'un mois à l'autre.
- Produits de catégories spéciales : pour un certain nombre de produits, les destinations sont secrètes pour des raisons de sécurité. Ces catégories spéciales sont incluses dans le commerce total à la rubrique *Non spécifiés*, mais ne figurent pas dans les données par pays ou par zone géographique.
- Le commerce avec les îles Midway, Wake, Guam, les îles Samoa américaines, Canton et Enderbury, les régions arctiques et antarctiques n'est pas compris dans la statistique.

## NEW ZEALAND

### Source:

Statistics New Zealand.

### Statistical territory:

Excluding Niue Island, Tokelau and Cook Islands.

### System of trade:

General trade.

### Partner country notes:

1. Including American Samoa, Guam, UN Trust Islands under US administration, other US Pacific Islands, and US Virgin Islands.

### Special remark:

Prior to August 1997, both imports and exports were recorded in the calendar month in which entries were processed by the New Zealand Customs Services. From August 1997, monthly exports statistics are being produced using the actual date of export. This change in methodology introduced a discontinuity in time series.

## CORÉE

## NOUVELLE-ZÉLANDE

### Source :

Statistics New Zealand.

### Territoire statistique :

Non compris l'île Niue, les îles Tokelau et Cook.

### Nature du Commerce :

Commerce général.

### Observations sur les pays partenaires :

1. Y compris les îles Samoa Américaines, l'île de Guam, les îles sous mandat de l'ONU administrées par les États-Unis, les autres îles américaines du Pacifique et les îles Vierges américaines.

### Observation particulière :

Avant août 1997, les importations et les exportations ont été comptabilisées dans le mois où elles étaient enregistrées par le service des douanes néo-zélandaises. Depuis août 1997, la comptabilisation des exportations est faite à partir de la date réelle d'exportation. Ce changement méthodologique a introduit une discontinuité dans les séries.

Exports made prior to 1 August 1997, but processed after that date have been included in the August 1997 month data to prevent them being excluded from trade statistics altogether.

In import, Trade with New-Zealand concerns re-imports. In export, it concerns exports to Cook, Niue and Tokelau Islands.
