OECD WORKING PAPERS ON FINANCE, INSURANCE AND PRIVATE PENSIONS

OECD Working Papers on Finance, Insurance and Private Pensions provide timely analysis and background on industry developments, structural issues, and public policy in the financial sector, including insurance and private pensions. Topics include risk management, governance, investments, benefit protection, and financial education. These studies are prepared for dissemination in order to stimulate wider discussion and further analysis and obtain feedback from interested audiences.

The papers are generally available only in their original language English or French with a summary in the other if available.

Abstract/Résumé

THE STATUS OF FINANCIAL EDUCATION IN AFRICA

Abstract: While the African situation displays disparities both within and between countries in terms of economic and human development, on average, many African countries have relatively low school enrolment ratios, highly informal labour markets, high poverty rates, as well as low financial inclusion and financial literacy levels.

Against this backdrop, it is desirable to improve the level of financial literacy among the most vulnerable parts of the African population. Well-designed financial education initiatives can reduce demand-side barriers to more effective financial inclusion and can empower vulnerable individuals economically, so that they can better manage household resources and develop income generating activities.

This report provides an overview of the status of financial education programmes developed in Africa, discusses their rationale, and offers initial guidance for policy makers. In recent years public authorities, as well as the non-profit and the private sector, engaged in the development of financial education programmes in several African countries. These programmes typically aim at improving financial knowledge and skills, raising awareness of financial issues, and improving financial inclusion. They usually target vulnerable groups, including low-income people, women, and youth, and sometimes deliver financial literacy training in combination with access to financial products.

- D18: Microeconomics / Household Behaviour and Family Economics / Consumer Protection

Keywords: Africa, financial education, financial inclusion, financial literacy
L’ÉDUCATION FINANCIÈRE EN AFRIQUE : ÉTATS DES LIEUX

Résumé: Malgré les disparités en termes de développement économique et humain que l’on observe en Afrique, tant d’un pays à un autre qu’au sein de chaque pays, de nombreux pays du continent restent caractérisés par des taux de scolarisation relativement bas, des marchés du travail très peu structurés, des taux de pauvreté élevés de même que de faibles niveaux d’inclusion financière et de compétences financières.

Dans ce contexte, il est souhaitable d’améliorer le niveau des compétences financières des segments les plus vulnérables de la population africaine. Des projets d’éducation financière bien conçus peuvent réduire les obstacles (du côté de la demande) à une meilleure inclusion financière et ils peuvent conduire les personnes fragiles à accéder à une autonomie économique leur permettant de mieux gérer leurs ressources et de développer des activités créatrices de revenus.

Codes JEL:

EXECUTIVE SUMMARY

This report provides an overview of the status of financial education programmes developed in Africa, discusses their rationale, and offers initial guidance for policy makers. The report was prepared for the OECD-FSB Conference on Financial Literacy: Financial Education for All (27-28 October 2011, Cape Town, South Africa). It is based on desk and online research, on the contributions of national and international institutions involved in financial education in Africa, as well as on the work of the OECD International Network on Financial Education (INFE), and has been updated following conference discussions and feedback from national authorities and other stakeholders.

The African situation is not uniform across the continent and disparities, both within and between countries in terms of economic and human development, are common.

Yet, on average, many African countries are characterised by relatively low school enrolment ratios, highly informal labour markets, and high poverty rates. Moreover, the fraction of population having access to formal financial products is small in many African countries, with large proportions of individuals using only informal products and services, or being completely excluded from financial sectors. Low financial literacy is an important demand-side barrier to more effective financial inclusion. The available (limited) evidence suggests that financial literacy levels are quite low.

Against this backdrop, there is scope for improving the level of financial literacy among the most vulnerable parts of the African population. Well-designed financial education initiatives can reduce demand-side barriers to more effective financial inclusion and can empower vulnerable individuals economically, so that they can better manage household resources and develop income generating activities.

Indeed, in recent years several governments and financial regulators engaged in the development of financial education programmes in Africa. Notable examples of advanced programmes by public authorities and of national strategies have been found in Ghana, Namibia, South Africa and Uganda. Several other programmes have been implemented by a range of stakeholders, including NGOs, MFIs and financial institutions.

The financial education programmes identified in this report typically aim at improving financial knowledge and skills, raising awareness of financial issues, and improving financial inclusion. They usually target vulnerable groups, including low-income people, women, and youth, and sometimes deliver financial literacy training in combination with access to financial products, or with training on other economic and life skills. A number of impact evaluations of programmes have been launched in recent years which should allow the identification of most efficient practices in the future.
1. Introduction

In 2008 the OECD created the International Network on Financial Education (INFE), bringing together high-level public officials from about 100 developed and developing countries to discuss and exchange issues, programmes, and good practices related to financial education. To date 19 African countries are members of the INFE: Cameroon, Cape Verde, Egypt, Ethiopia, Ghana, Ivory Coast, Kenya, Lesotho, Libya, Malawi, Mauritania, Morocco, Namibia, Nigeria, South Africa, Tanzania, Uganda, Zambia and Zimbabwe.

This report provides an initial overview of financial education programmes recently developed in Africa and of their rationale and objectives, and offers initial suggestions for policy makers and other stakeholders. This document was prepared for discussion during the OECD-FSB Conference on Financial Literacy: Financial Education for All (27-28 October 2011, Cape Town, South Africa) and has been updated following conference discussions and feedback from national authorities and other stakeholders.

In the context of this report, financial education is defined as in the OECD publication *Improving Financial Literacy. Analysis of Issues and Policies* (OECD, 2005a):

“Financial education is the process by which financial consumers/investors improve their understanding of financial products and concepts and, through information, instruction and/or objective advice, develop the skills and confidence to become aware of (financial) risks and opportunities, to make informed choices, to know where to go for help, and to take other effective actions to improve their financial well-being and protection.”

This definition refers quite broadly to financial products, opportunities and risks. In relation to African countries and to developing countries, it can be interpreted in a flexible way, in order to take into account the importance not only of the informal sector, but also of in-kind household resources, alongside monetary ones.

This stock-taking exercise is based on desk and online research, as well as on the contributions of national and international institutions involved in financial education and on previous INFE work.

The report is structured as follows:

- Section 2 introduces the African socio-economic development context and provides evidence on financial inclusion and financial literacy. These factors highlight the importance of developing financial education in Africa;
- Section 3 summarises the main characteristics of the financial education initiatives identified in Africa (e.g., aim, stakeholders involved, funding sources, target population, delivery channel and content), highlighting some case studies;
- Section 4 reports the main findings obtained by selected evaluation exercises;
- Section 5 reviews in more detail the financial education initiatives by country;
- Section 6 concludes by offering preliminary guidance for policy makers.
The Appendix contains additional relevant information concerning the African socio-economic development context (Appendix A) and financial inclusion data (Appendix B). A glossary is in Appendix C, and Appendix D contains a list of acronyms.

Acknowledgements

The working paper benefited from the help of the following country contacts, who reviewed parts of the report and provided additional material: Olivia Davids (Financial Services Board of South Africa), Nicholas Gyabaah (Ministry of Finance and Economic Planning of Ghana), Ingrid Goodspeed (National Treasury of South Africa), Simone Iltgen (GIZ), Japhet Katto and Ann Muhangi (Capital Markets Authority of Uganda), Aldrin Manyando (Ministry of Finance of Namibia), Wilson Mazimba (Bank of Zambia), Thato Mohasoa (Central Bank of Lesotho), Matu Mugo (Central Bank of Kenya), Polycarp Musinguzi (Bank of Uganda), Chisha Mwanakatwe (Bank of Zambia), Hastings Mzoma (Reserve Bank of Malawi), and Johannes Naanda (Namibia Financial Institutions Supervisory Authority, NAMFISA). Insightful comments and additional material were also provided by Karen Austrian (Population Council), Leslie Barcus (Microfinance Opportunities), Jessica Benjamin and Alyna Wyatt (Genesis Analytics), Jessica Massie (Microfinance Transparency), Gerda Piprek (MarketWorx), and Hidde van der Veer (Aflatoun).
2. **Background**

**Summary**

The African situation is not uniform across the continent and disparities both within and between countries in terms of economic and human development are common. Yet, on average, many African countries are characterised by relatively low school enrolment ratios, highly informal labour markets, and high poverty rates.

The fraction of population having access to formal financial products is small in many countries, with large proportions of individuals using only informal products and services, or being completely excluded from financial sectors.

Low financial literacy is an important demand-side barrier to more effective financial inclusion. The very few existing measurement exercises highlight low levels of financial literacy. Other measurement initiatives are underway either under the initiative of national authorities, or as a part of the international measurement exercises promoted by the OECD and the World Bank.

Against this backdrop, there is scope for improving the level of financial literacy among the most vulnerable parts of the African population. Well-designed financial education initiatives can reduce demand-side barriers to more effective financial inclusion and can empower vulnerable individuals economically, so that they can better manage household resources and develop income generating activities.

This section introduces the African context and describes the extent of financial inclusion and financial literacy. These factors are then used to highlight the relevance of developing financial education in Africa.

**Economic and social challenges**

Africa’s development situation is not uniform across the continent and there are notable between- and within-country differences. Yet, overall it can be considered challenging in social and economic terms. High poverty and low schooling rates are coupled with volatile and unequally distributed incomes, as evidenced in Appendix A. In such a context it is not surprising that many people experience difficulties in accessing financial services and in managing their scarce household resources effectively.

In addition, as is the case in several developing economies, in many African countries there are large shares of the population who are not only poor but also exposed to various constraints in managing their resources, as they live in risky environments with limited public, social and market opportunities to adequately protect themselves from these risks. This means they may not be adequately prepared to face natural, agricultural, health and security shocks as they often have to deal with droughts, floods, illness or loss of a family member, theft or damage to property/crop/livestock. Moreover, jobs and incomes in some African countries are subject to a high degree of uncertainty, given the breadth of the informal sector, and that only few have access to formal employment. Typically, incomes from informal jobs are not only low but also irregular, making it more difficult for households to smooth their consumption over time. In addition, more lenient regulation and consumer protection in relation to financial services expose individuals to a riskier environment too. Even when consumer protection legislation exists, lack of resources, institutional capacity, and enforcement powers often weaken its effectiveness (CGAP and WB, 2010).
Low but improving levels of financial inclusion

In a context of extreme poverty and low schooling rates for large segments of the population, it is not surprising that in many African countries the percentage of the adult population that is economically marginalized and excluded from financial markets and services is remarkably high.

Three main sources provide data on the extent of people’s access to banking in African countries: the FinScope surveys, the World Bank and Gallup (Table 1). A detailed description of the data sources is contained in Appendix B. Even though the results of the various sources are not entirely homogeneous for a number of countries, it is useful to report each of them to have the broadest possible geographical coverage. Aside from the discrepancies across data sources, the overall picture provided by Table 1 is that of a low level of banking, even though there is large heterogeneity between countries.

Two striking aspects emerge from the comparison in Table 1. First, it is difficult to obtain a comparable measure of financial inclusion for a large number of countries. The FinScope and Gallup surveys collected data with a common methodology across countries, thus allowing cross-country comparability, but are quite limited in their geographical coverage. On the contrary, the WB exercise collects figures for a much larger number of countries, but combines data obtained from potentially non-homogenous sources. Other methodological differences across the three sources that may account for the disparity in figures are discussed in Appendix B. Second, it is apparent that the availability of consistent evidence on financial access is quite limited, highlighting the need to collect more and better data.

Concentrating on the FinScope surveys allows us to both disentangle various ‘degrees’ of financial inclusion, and to assess within- and between-country variation in access. FinScope surveys present the so-called ‘financial access strand’, where the adult population is divided into four groups according to their use of different financial products (Table 2):

- **banked** individuals include adults who have/use at least one banking product issued by a bank regulated by the central bank (this group is not necessarily exclusive, as they may also use other formal or informal products);

- **formally served** individuals include adults who do not have/use any banking product but have/use other products issued by regulated non-bank financial institutions (e.g. regulated microfinance institutions, insurance companies, retail credit providers, remittance service providers, etc.);

- the **informally served** group includes adults who only have/use informal products, meaning financial products and/or services which are not regulated, e.g. cooperatives, farmers associations, savings clubs/groups, private money lenders, etc.;

---

1 The INFE has adopted the following working definition of financial inclusion: “Financial inclusion refers to the process of promoting affordable, timely and adequate access to a range of regulated financial products and services and broadening their use by all segments of society through the implementation of tailored existing and innovative approaches including financial awareness and education with a view to promote financial wellbeing as well as economic and social inclusion.”
- finally, the financially excluded group includes adults who do not have/use any financial product (even if they may rely on friends/family/employers for borrowing, or may save at home).

Source: FinScope (various years); WB (20008); Gallup (2010). Percentage of the adult population accessing banking services. See Appendix B for a detailed description of the data sources.

Among the countries surveyed by FinScope, the share of adults having at least one banking product is below 15% in Mozambique, Tanzania, Rwanda and Zambia, is around 20-30% in Malawi, Uganda, Kenya, Nigeria and Ghana, and is above 40% in Botswana, Namibia, Swaziland, and South Africa (63%). Having non-bank financial products is not very common in general, except in Kenya and Botswana, where 18% of the adult population has no banking product but at least one other formal product, including savings through Savings and Credit Cooperative Societies (SACCOs), microfinance, short-term and long-term insurance, and funeral insurance. Overall, the fraction of formally served adults (holding banking and/or non-banking products) is, again, highest in Botswana, Namibia and South Africa and lowest in Mozambique and Tanzania.

Source: FinScope (various years). Survey year in parenthesis. Percentage of the adult population. Notes: Banked + Formal other = Formally served + Informally served = Financially included.

The size of the informally served population is quite large in Uganda (42%) and in Kenya, Rwanda, and Tanzania (around 25-30%), and is very small in Namibia, where most adults are either banked or excluded. Grouping together formal and informal financial access, which often overlap, results in more than 60% of the population of Kenya, Botswana, Swaziland, Uganda and South Africa (77%) being included. On the other side of the inclusion spectrum, the size of financial exclusion is close to 50% in Ghana, Nigeria, Namibia, Rwanda, Malawi and Tanzania, while it is highest in Zambia and Mozambique (78%).

Considerable between-country variation in financial access is coupled by large within-country heterogeneity. Gender differences are present. Women are less likely to be banked and have a higher degree of exclusion. Differences are even more pronounced across the rural/urban population, with urban areas having the highest share of banked adults and rural areas displaying high financial exclusion. As expected, financial inclusion is remarkably different according to income source and occupational status. The highest/lowest share of banked/excluded individuals is to be found among workers employed in the formal sector and receiving a wage or salary. The degree of formal financial inclusion decreases among individuals whose main income sources are farming and own businesses. They are also more likely to use informal products or to be excluded. Finally, exclusion is at its highest level among those who depend on odd jobs or other family members for financial support.

In addition to banking/transaction products and services, the access and use of formal insurance and saving products are also low in most African countries. As mentioned above, large shares of the population have to deal with high uncertainty concerning their labour incomes, agricultural resources, and health status. Moreover, low income per capita often implies not only that poor consumers cannot afford a high standard of living, but also that they do not have resources to buffer against adverse events or income shocks, preventing them from putting in place self-insurance mechanisms.

---

2 However, this information was not available for all countries (FinScope, various years).
Both the share of adults who claim to be saving and the saving vehicles used vary considerably across the countries surveyed by FinScope. Among those who report to be able to save, many rely on informal saving products. Moreover, some people save in non-monetary forms (e.g., livestock), making the actual rate of saving potentially higher than the reported one.

In spite of the low overall level of financial inclusion, several countries made progress in financial inclusion in recent years. In almost all countries having multiple FinScope surveys (Kenya, Nigeria, South Africa, Tanzania, Uganda, and Zambia) the share of banked adults increased (with the exception of Zambia), and that of the financially excluded decreased. The development of mobile financial services has been one of the factors behind these improvements. According to “The Mobile Financial Services Development Report 2011” by the World Economic Forum (2011), the number of mobile accounts is above 10% of the adult population in Ghana, Kenya and Tanzania, while it is somewhat lower in South Africa and Uganda (and very limited – below 1% – in Nigeria). According to the report, initial mobile banking adoption has been mostly driven by the lack of alternatives (i.e., access to traditional financial services).

Limited but consistent evidence of low financial awareness and knowledge, and of non-savvy financial behaviours

A range of elements account for high financial exclusion, including supply-side factors (e.g., banking terms and conditions, high fees, physical barriers, etc.) and various demand-side factors, such as low income, low financial literacy, and psychological and cultural barriers (Kempson, Atkinson, and Piley, 2004). In particular, financial literacy is relevant for financial inclusion because it can improve people’s money management skills, it can enable them to compare financial products so as to choose the most appropriate for their needs, and increase their understanding of their rights and responsibility as consumers (OECD et al., 2009).3

So far there is very limited evidence of financial literacy levels in Africa. At the moment, there are no cross-country data available, but a few countries have started measuring it, or have plans to do so, either on their own initiative, or as a part of the international financial literacy measurement exercises promoted by the OECD and the World Bank, under the sponsorship of the Russian/World Bank/OECD Financial Literacy and Education Trust Fund.4

Country-level evidence about financial literacy is currently available for Kenya and South Africa. Evidence about Malawi, Namibia, Tanzania and Zambia will become available from the World Bank financial capability measurement exercise (under the support of the Russian Trust Fund). Moreover, the Bank of Uganda (through the FinLit Foundation) has planned a financial literacy measurement exercise in the country.

3 The OECD/INFE financial literacy measurement pilot defines financial literacy as “a combination of awareness, knowledge, skill, attitude and behaviour necessary to make sound financial decisions and ultimately achieve individual financial wellbeing” (Atkinson and Messy, 2012).

4 The OECD/INFE created a questionnaire and the related methodology to measure financial literacy in an internationally comparable way. This questionnaire has been successfully piloted across 13 countries, including South Africa (OECD INFE 2011, Atkinson and Messy, 2012). Moreover, the World Bank is developing a survey instrument to measure financial capability in low and middle-income countries (Holzmann, 2011).
Atkinson and Kempson (2008) identify preliminary indicators of financial literacy in Kenya by analysing the 2006 FinAccess survey of Kenya. The study focuses on three main domains (i.e., day-to-day money management, planning for financial security, and risk and appropriate use of financial services) to measure financial literacy. Given that large sections of the population are poor and have limited access to financial services, the attempt of Atkinson and Kempson at measuring financial literacy focuses on behaviour and attitudes, rather than on financial knowledge. Their analysis indicates that many people in Kenya show difficulties in day-to-day money management and planning behaviour, although the authors note that scores based on behaviour may indicate not just an inability to make ends meet but also poverty and deprivation.

The Financial Services Board of South Africa (FSB) participated in the OECD INFE financial literacy measurement pilot (Atkinson and Messy, 2012). The results indicate that South Africans exhibit moderate to low levels of financial literacy on many indicators across four domains (knowledge and understanding, managing money, financial planning, and choosing financial products). In terms of financial knowledge, many respondents have problems in answering questions about interest rates and risk diversification. In terms of financial behaviour, many South Africans appear to have a responsible approach to financial management, but awareness and use of financial products is low and long-term planning is made difficult by the scarcity of resources to draw upon in case of emergency (Roberts and Struwig, 2011).

The importance of financial education for African countries

Large segments of the African population face a context characterised by limited access to education, labour markets with a high degree of informality, and high poverty rates. Moreover, the fraction of population having access to regulated financial products is small in many African countries, with large proportions of individuals using only informal products and services, or being completely excluded from financial sectors. The available evidence also suggests that financial literacy levels are quite low.

Against this backdrop, there is scope for improving the level of financial literacy among the most vulnerable parts of the African population. There are several reasons justifying the implementation of well-designed financial education initiatives in Africa, including the need for higher financial inclusion and appropriate use of financial products, as well as the need both to better manage personal /household resources, and to start and develop entrepreneurial activities.

First, financial education can help to reduce the demand-side barriers to financial inclusion. Improved financial literacy can increase awareness about products and services, as well as confidence and ability in using them. In turn, this can help to promote the demand for formal financial products and services. To be effectively included in financial markets, consumers need not only to have access to safe and regulated financial products, but also to be aware of their existence, understand their terms and conditions, and be able to compare products so as to choose the most appropriate to their needs. Moreover, consumers’ lack of knowledge and experience with financial issues may put them in a disadvantaged position with respect to banks, microfinance institutions, and informal lenders, thus increasing the probability that they fall victim to fraud or abuse. In this respect, financial education can also foster effective financial inclusion by making consumers aware of their rights, so that they can better avoid scams and abuse from unscrupulous financial sector providers.

Second, financial education can empower consumers to better manage their personal and household resources, both on a day-to-day basis and over a long-term horizon. Given the little money available to poor households, it is important that they are able to budget and plan short-term expenses,
avoiding borrowing to make ends meet and unnecessary spending. Moreover, as poor consumers often rely on highly uncertain income sources from the informal sector, they need to be able to plan and save in order to smooth their income fluctuations and to deal with unexpected personal or family expenses without falling into overindebtedness.

Third, financial education is also relevant for the small-scale entrepreneurial activities that often constitute an important source of revenues for poor households. Due to the relative scarcity of formal jobs, many individuals become own account workers, with sometimes a blurred distinction between personal and business finances. Greater financial literacy can empower vulnerable individuals to successfully manage and develop small-scale or micro-enterprises, improving their management skills and the appropriate use of financial products for their businesses.

Furthermore, improved financial literacy can potentially strengthen the efficiency of financial markets. Consumers who are better informed about financial risks and opportunities, and who are more aware of their own rights and responsibilities in relation to financial institutions can contribute to developing better functioning financial markets (alongside appropriate regulation and consumer protection). Moreover, by fostering long-term saving, financial education can promote the development of formal financial markets and infrastructure, ensuring that the financial sector makes an effective contribution to real economic growth.
3. Characteristics of financial education programmes in Africa

Summary

Given the challenges posed by low literacy and financial exclusion, over the last few years many governments and other stakeholders have engaged in the development of financial education programmes in Africa. Some countries have plans or are in the process of developing their National Strategies for Financial Education. In others, public authorities have implemented financial education initiatives at the national level, but not fully-fledged national strategies. Aside from nationally coordinated initiatives, a range of stakeholders, including NGOs, MFIs and financial institutions have implemented several scattered financial education programmes.

The financial education programmes identified in this working paper typically aim at improving financial knowledge and skills, raising awareness, and improving financial inclusion. They usually target vulnerable groups, including low-income people, women, and youth, and sometimes deliver financial literacy training in combination with access to financial products, or with training on other economic and life skills.

In recent years, governments and other stakeholders realised the challenges posed by low literacy and financial exclusion in Africa, and engaged in the development of financial education programmes (see Figure 1). Even though in many African countries financial education awareness at the policy level appears to be lower than in other regions of the world, it is growing rapidly. This section summarizes the main characteristics of the financial education initiatives identified in Africa and provides some examples.5

The state of development of financial education initiatives is varied across the continent. Kenya, Malawi, South Africa, Tanzania, Uganda, and Zambia have plans or are in the process of developing their National Strategies for Financial Education.6 Ghana launched a National Strategy for Financial Literacy and Consumer Protection in the Microfinance Sector in 2009. In 2012 the Ministry of Finance of Namibia launched its Financial Literacy Initiative. In other countries – including Lesotho, South Africa and Zimbabwe – public authorities have implemented financial education initiatives at the national level (but not fully-fledged national strategies). Aside from nationally coordinated initiatives, a range of stakeholders, including NGOs, MFIs and financial institutions have implemented several scattered financial education programmes.

5 The stock-taking of programmes is based on desk and online research, as well as on the contributions of national public authorities and international NGOs involved in financial education. The stock-taking is as comprehensive as possible given the currently available information.

6 The INFE High-level Principles on National Strategies for Financial Education (OECD INFE, 2012c; Grifoni and Messy, 2012) define a national strategy for financial education as “a nationally coordinated approach to financial education that consists of an adapted framework or programme, which:
- Recognises the importance of financial education - including possibly through legislation- and defines its meaning and scope at the national level in relation to identified national needs and gaps;
- Involves the cooperation of different stakeholders as well as the identification of a national leader or coordinating body/council;
- Establishes a roadmap to achieve specific and predetermined objectives within a set period of time; and,
- Provides guidance to be applied by individual programmes in order to efficiently and appropriately contribute to the national strategy.”
The number of programmes varies considerably across regions and countries. South Africa accounts for the highest number of initiatives identified, followed by Uganda. Broadly speaking, several programmes have been found in almost all Eastern African countries (i.e., Burundi, Kenya, Madagascar, Malawi, Mozambique, Rwanda, Tanzania, Uganda, Zambia, and Zimbabwe), and almost all Southern African ones (in Botswana, Lesotho, Namibia and South Africa). A few initiatives have also been identified in Western and Northern African countries (i.e., Burkina Faso, Egypt, Ghana, Mali, Morocco, Nigeria, and Senegal). On the contrary, financial education programmes appear to be missing in Central Africa.

A list of programmes with a summary of their main characteristics is reported in Table 4 in Appendix E. The following paragraphs present financial education programmes in Africa according their aim, stakeholders involved, funding sources, target population, delivery channel and content. Section 4 looks at selected evaluations of these programmes.

Figure 1. Countries with financial education initiatives

The map is as comprehensive as possible given the currently available information. It covers countries where initiatives have been planned, are underway, or have already been implemented, and it takes into account programmes by any stakeholders.

Table 4 provides a catalogue of programmes organized on the basis of the main stakeholder(s) and funder(s) of each initiative: public authorities; non-for-profit organisations, research institutions, and foreign development agencies; public/private or non-profit/private partnerships; and the private sector.
Aim

The most frequent goals of the programmes surveyed are (i) to improve the financial knowledge and skills of the target populations so as to empower them from an economic point of view, (ii) to raise awareness of financial issues and/or of consumers’ rights and responsibilities, (iii) to improve financial inclusion, by encouraging saving and access to formal financial products. Even when this last goal is not explicitly stated, it is apparent from the fact that many programmes target low income individuals or other vulnerable groups, or from the fact that they combine financial literacy training with access to saving products.

Stakeholders

While in Ghana, Kenya, Lesotho, Malawi, Namibia, South Africa, Tanzania, Uganda, Zambia, and Zimbabwe the government, the central bank or other financial supervisory bodies are involved in the development of coordinated financial education initiatives at the national level, or plan to do so, in many others the non-profit and the private sectors are the sole, or main, providers and sponsors.

Public sector initiatives are typically broader in scope than programmes implemented by NGOs and the private sector, and they tend to articulate their initiatives through several programmes and channels. For instance, the Financial Services Board (FSB) in South Africa, within its Consumer Education Initiative, conducts community outreach and awareness workshops, TV, radio, and road-shows.

Sometimes public and private bodies work in cooperation. For instance several awareness projects were jointly implemented in recent years by the FSB and the South African Insurance Association (SAIA). These initiatives included financial education for commuters and for consumers in shopping malls. In both cases the content was taken from consumer education booklets developed by the FSB, covering money management, debt issues, short-term insurance, and consumers’ right and responsibilities.

It is apparent that in a sizeable number of programmes financial institutions are the sole or main stakeholder involved in the implementation of a financial education project. In particular, in Botswana, Burkina Faso, Mali, and Senegal we only identified financial education initiatives implemented by the private sector. Other examples include programmes by local bank/commercial MFIs (e.g., Postbank and Ubank in South Africa, Faulu in Kenya, Banque Populaire du Rwanda, Zanaco in Zambia, etc.) or international financial institutions (e.g., Citigroup, Visa, Barclays).

The involvement of the private sector in financial education initiatives is important, especially in projects aiming at improving access to financial products, as it can supplement public resources and shows engagement in terms of social responsibility. However, the strong presence of private financial institutions as direct providers of financial education raises some concerns about appropriateness and about potential conflicts of interest between education and marketing activities. Moreover, private sector initiatives are directly or indirectly motivated by profits, and their effectiveness is typically measured in terms of higher product uptake (e.g., more bank accounts or other products being opened, more transactions, etc.), and not necessarily in terms of improved financial knowledge and skills, or economic empowerment.

For these reasons, it is important that the role of financial institutions is channelled through self regulatory bodies, framed within quality standards and codes of conduct, or monitored/regulated by
public authorities. For instance, the South Africa’s Financial Sector Charter Council set Implementation Guidelines for Consumer Education Standards, defining standards in terms of branding appropriateness (among others).  

**Funding**

Funding sources include local governments, central banks and other financial regulators, private sector institutions (single ones or associations of them), foreign governmental development agencies (i.e., USAID, DFID, the German Agency for International Cooperation, the Russian/World Bank/OECD Financial Literacy and Education Trust Fund), international organisations (i.e., European Union, Unicef), and private foundations.

A frequent source of funding is the Financial Education Fund (FEF) launched in 2008 by the UK Department for International Development (DFID). The FEF awards grants for financial education projects dedicated to low-income people and which must have an evaluation component. It funds a wide range of institutions, such as local and international NGOs, local banks/MFIs, and is supporting the Bank of Zambia in the development of its National Financial Literacy Strategy (FEF, 2012; Wyatt, 2011).

One example of a FEF-financed project is the Faulu Kenya: Masomo 2B programme, conducted by Faulu Kenya, a local MFI. The programme has a train-the-trainer component for Faulu field officers and community leaders, who in turn hold financial education workshops to clients and members of the public (Faulu Kenya, 2011a, 2011b).

In general, the presence of various funding sources, or of partnerships between different stakeholders, is important in improving the diversification of resources, therefore making more likely the continuation of a programme.

**Target population**

Many initiatives are intended for the general population, while others are targeted at specific subgroups. Unsurprisingly, typical targets are the most vulnerable individuals, including one or a combination of the following groups: low-income people, un/underbanked individuals, women, youth/students, children, people living in rural areas and farmers. Notably, several programmes are directed at young people in general, and at young women in particular, as they are particularly vulnerable both in economic and health terms. Moreover, there are some train-the-trainer programmes devoted exclusively or in part to teachers/trainers/advisors of the above target groups.

The Nakekela Imali! (Take care of your money!) project is an example of training programme devoted to low-income people, targeting mineworkers at two South African mining houses. Mineworkers fall within the lowest living standard measures categories. The programme is led by Ubank, a commercial

---

8 The South Africa’s Financial Sector Charter requires financial institutions to commit to annually invest a minimum of 0.2% of post tax operating profits in consumer education and to direct 0.5% per annum of post tax operating profits to corporate social investment (CSI), where CSI projects may include financial literacy programmes. Moreover, the Financial Sector Charter Council developed Implementation Guidelines for Consumer Education Standards, requiring financial institutions to follow given standards (regarding physical accessibility, appropriateness, affordability, simplicity and non-discrimination) in their consumer education initiatives.
bank, with Innovations for Poverty Action (IPA) carrying out a randomized control evaluation. This programme consists of two-day on-site training workshops, where participants also receive training material to take home and share with their families (IPA, 2010; Blair and Poppleton, 2011).

**Delivery channel**

Most programmes take the form of training courses or short workshops. Other delivery channels include printed material, multimedia (DVDs, CDs, radio or television broadcasts, newspapers, etc.), websites, road shows and other public events, and the provision of advisory services.

In some cases, financial education training is provided in conjunction with other types of training aimed at improving the economic empowerment of vulnerable groups and their overall decision-making capability. Additional forms of training typically include health-related issues (e.g. HIV/AIDS prevention and reproductive health), and business planning and entrepreneurial skills.

Financial education training is often also accompanied by printed material (booklets, manuals, log-books, etc.). Analogously, awareness campaigns often include the delivery of printed material in the form of magazines, leaflets, and the like. For instance, the consumer education campaign in Uganda promoted by the Financial Sector Deepening project Uganda (FSDU) included among its delivery channels posters, leaflets, flyers and the MoneyWorld newspaper (FSDU, 2007).

In a few countries financial education is provided in schools. In South Africa, financial literacy is integrated into certain school subjects such as ‘Mathematical Literacy’ and ‘Economics and Management Sciences’ in all grades. The Capital Markets Authority of Uganda carries out school seminars and competitions, and is working with national bodies responsible for education to introduce capital markets issues in secondary schools. In Ghana, the Ministry of Finance and Economic Planning is enhancing the financial literacy content of school syllabuses. In Zambia, the Ministry of Education, Science and Vocational Training is planning to integrate financial education into the national school curriculum. In addition to public initiatives, financial education is provided to school children also through NGOs and private sector’s programmes. For instance, the Aflatoun curriculum is taught in some schools in Ghana and Uganda; the Savings Bank Foundation for International Cooperation (SBFIC) and MFIs deliver financial education in schools in Rwanda; Junior Achievement provides extra-curricular financial education training to school pupils in Nigeria, Uganda and Zambia; and the Financial Fitness programme by Zanaco in Zambia also includes extra-curricular financial education in schools.

Quite frequently, training is integrated in programmes providing access to financial products, such as saving accounts or microfinance. In a few programmes, the saving product is specifically designed to favour access of some groups (e.g., accounts for youth) or to try to exploit behavioural aspects to increase take-up of financial products (for instance, allowing the labelling of funds within a saving account in order to verify whether directing deposits to a specific goal induces higher saving).

Given that most programmes are directed at low income consumers, the use of websites to disseminate information is scarce. However, some public authorities have included consumer education information and materials (e.g., brochures) on their websites. These include, for instance, the Capital Markets Authority of Uganda, the Namibia Financial Institutions Supervisory Authority, and the Financial Services Board and the National Credit Regulator in South Africa.

Some initiatives are preceded by a train-the-trainer programme, directed at school teachers, microfinance institutions staff, consumer advisors, and so on. For instance, the project Financial
Education for Young Women in Rural Zambia exploited the Camfed Association network of young women (Cama), present in Zambia and in other African countries, to develop cascade training. Sixteen core trainers were responsible for training 800 women and from them identified 160 peer educators who in turn trained a large number of other young women in one-day financial education workshops (FEF, 2012; Hamweemba, 2011).

Several awareness campaigns have been identified; they have been directed at the general population or at rather broad groups (such as consumers, workers, commuters) and typically have used media that can reach wide audiences (e.g., radio, TV, DVD, road shows, theatre performances). On a similar vein, a number of ‘edutainment’ initiatives (e.g. soap operas, movies, and radio dramas with an educational content) have recently been launched with the aim of reaching a large audience. The Kenyan soap opera Makutano Junction is an example. It is crafted as a development communication tool, highlighting health, environmental and social issues. Some episodes of series 9 and 10 also address financial education topics (FEF, 2012).

An important issue in the provision of training programmes, printed material and awareness campaigns is the language used to deliver financial education. This is crucial not only to avoid discrimination but also to improve the effectiveness of the learning effort. Several programmes do take this issue into account by using vernacular languages in delivering training and/or by printing booklets in several languages.

**Content**

In terms of contents, most financial literacy training courses focus on such issues as budgeting, saving and borrowing. Some initiatives, however, have a more specific content, regarding for instance pensions or insurance. A few programmes are mainly focused on consumer issues, including their rights and responsibilities, how to make complaints and obtain redress, etc.

It is not unusual for training programmes to adopt, or use material adapted from, standard financial literacy curricula developed by other organisations, typically international NGOs. Two examples of materials widely adopted are the Aflatoun Social and Financial Education Curriculum, targeted at children and youth, and the Global Financial Education Program, developed by Microfinance Opportunities and Freedom from Hunger and financed by Citigroup.

For instance, the Aflatoun curriculum is used in the project Evaluating the Efficacy of School Based Financial Education Programme, funded by the FEF in Ghana. The curriculum is delivered in some regions of Ghana by local NGOs. Innovations for Poverty Action carried out a randomized control trial evaluation of the Aflatoun curriculum and of an alternative financial education curriculum to assess their impact on the knowledge, attitudes and behaviours of children (FEF, 2012; IPA, 2011a).

A crucial aspect of programme success is that the content is both appropriate and relevant for the target audience. Especially when a standard curriculum is used, it is important that it is adapted not only to the financial literacy level of the trainees, but also to their general literacy and maths skills.
4. Evaluation of financial education programmes and their findings

<table>
<thead>
<tr>
<th>Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>As is the case in many regions of the world, relatively few financial education programmes in Africa have been formally evaluated. However, a number of impact evaluations of programmes have been launched in recent years providing valuable results.</td>
</tr>
</tbody>
</table>

Whilst a number of financial education initiatives have been identified in Africa, an impact assessment evaluation has been completed only for some of them, as with financial education programmes in many parts of the world. A number of impact evaluations of programmes have been launched in recent years, providing valuable results. In this section, we briefly summarize the main findings obtained by a selection of completed evaluation exercises.

Even though the limited evidence available at the moment does not enable thorough conclusions to be drawn, there is emerging evidence that some programmes produced promising results in terms of raising awareness of financial education issues, improving financial literacy and fostering sound financial behaviours. Further research is needed to explore whether these programmes would be effective on a larger scale and/or with other target groups.

In order to ensure the efficiency of their programmes and their fine-tuning overtime, stakeholders involved in the design and implementation of financial education programmes should embed programme evaluation in their initiatives, in order to increase programme effectiveness, identify areas for improvement and ensure a good use of resources.

**Ghana**

**ACDEP Financial Education Project (AFE) in Ghana**

The project aimed at delivering training on financial literacy and capacity building to farmers in Ghana. Programme delivery involved the training of trainers and the subsequent training of target farmers. The evaluation has been carried out through a longitudinal survey of the same subjects one year and a half after the implementation.

---

9 An additional small number of initiatives were conducting an evaluation at the time of writing, so we are not able to include their findings in this report.

10 Given the variety of approaches taken to evaluation, we complement the short descriptions of the results with synthetic information on the methodology adopted for each impact assessment exercise, compiled in Table 5. We refer the reader to the evaluation reports cited for further insights.

11 In this respect, the OECD INFE High-Level Principles for the Evaluation of Financial Education Programmes and the two dedicated guides provide useful guidance (OECD INFE 2010a, 2010b, 2012a). Moreover, the World Bank is designing an impact evaluation toolkit for financial education programmes in low and middle income countries with the support of the Russian/World Bank/OECD Financial Literacy and Education Trust Fund (Hinz, 2011; Yoong, 2011).
The findings of the evaluation suggest that the initiative had a positive impact on the saving behaviour of participants, both in terms of personal and group savings. The percentage of farmers who opened personal savings accounts with banks, and the percentage of farmers who knew how much was in their accounts increased in the endline results with respect to baseline. Moreover, among programme participants who said they knew their groups’ bank balances, the average savings per group was almost three times the baseline survey results; as the result for the comparison group was not significantly different from the baseline results, this supports the idea that the increase in savings by the group members is attributable to the financial education training they received (Morna and Anamoh, 2011).

An Opportunity for All: Financial Education in Africa

The programme tested the delivery of financial education via a multimedia video delivery channel (DVD played in banking hall for clients, and with portable DVD players for rural clients and communities) in Ghana, Malawi, Mozambique, and Uganda. The evaluation is based on a longitudinal study of ‘treated’ and ‘control’ groups observed over the course of the study by means of baseline and endline surveys, as well as transaction data collected by the banks.

The project aimed at achieving several objectives and the various country branches achieved them to different degrees, in part because some of them chose to focus more on some parts of the contents (e.g., in Uganda four of the nine modules focused on understanding financial products and features, while in Malawi several of the financial education units were targeted around mobile banking and familiarisation with technology). The objective of increasing the awareness of the target audience of the financial services available to them was met to a higher extent in Uganda than in the other countries. No country registered a substantial increase in the usage of savings accounts and insurance products with respect to the baseline (accounting for changes in the control group). The Malawi branches were more successful than the others at promoting better management of credit and increasing awareness of the dangers relating to multiple borrowing. Moreover, the survey data suggest that in Malawi (results not available for the other countries) the programme successfully encouraged diversification of asset storage away from cash, particularly through the use of ICT-based financial services (e.g., Smart Cards, ATMs and POS devices) (Pennington, Gustafson, and Ngo, 2011).

Evaluating the Efficacy of a School Based Financial Education Program

The project included two school-based financial education programs to which participating schools were randomly assigned. One treatment group consisted of schools enrolled in the Aflatoun program, teaching personal exploration, rights and responsibilities, saving and spending, planning and budgeting, and social and financial enterprise. The other treatment group consisted of schools receiving the Honest Money Box (HMB) program, which focused on the core financial education components of the Aflatoun program. Both treatment groups received saving boxes. A third group of schools received no treatment (control group).

The evaluation was carried out through a baseline and an endline survey. Students in HMB-assigned schools showed positive and significant increases in their overall attitudes toward savings, compared to students in Aflatoun and control schools. However, students in both Aflatoun and HMB schools showed positive impacts on (self-reported) savings behaviour compared to students in control schools: those students were more likely to save any money, and to save money at school (IPA, 2012a).
Kenya

Promoting Financial Capability in Kenya and Tanzania through Consumer Education and Protection Delivery

The project delivered financial education services through one-on-one counselling at two Consumer Advice Centres (CACs) in Nairobi, Kenya and Dar es Salaam, Tanzania. The evaluation established its baseline data from consumers on their first visit in the centres. This data was then combined with a post intervention questionnaire to establish to what extent consumers responded to the new knowledge gained from the services provided by the CACs.

In both Kenya and Tanzania, the share of respondents who report to save regularly and have an account at a bank or with an informal group increased. Similarly, the proportion of respondents who prepared monthly/weekly budgets, understood their importance, and stuck to them when spending increased. The results in terms of debt management are less encouraging. The share of respondents reporting to have paid all their loans without default increased in both countries, even though the number of those who have sometimes skipped their repayments appears to have increased in Tanzania (ESF Apex, 2012).

Safe and Smart Savings Products for Vulnerable Adolescent Girls in Kenya and Uganda

This is an ongoing project conducted in Kenya and Uganda by the Population Council. The programme targets young females living in urban slums and provides them with (i) weekly group meetings with their savings group and a female mentor in ‘safe spaces’; (ii) training on financial education; and (iii) access to an individual savings account at local financial institutions (Faulu and K-Rep Bank in Kenya; FINCA and Finance Trust Bank in Uganda).

The pilot intervention in Kenya started in December 2008, and involved a quantitative evaluation including girls from each financial institution and a comparison group. Major findings from the pilot evaluation were positive, showing positive change in social networks and mobility, gender norms, financial literacy, use of bank services, saving behaviour, and communication with parents/guardians on financial issues. For instance, girls in ‘treatment’ groups were significantly more likely to have a long term financial goal compared to girls in the comparison group. Faulu girls were significantly more likely to have been to a bank, and K-Rep girls were significantly more likely to have used a bank’s services than the comparison group. Girls in Faulu and K-Rep groups were at least three times more likely to be saving on a weekly basis and at least three times more likely to have saved any money in the previous six months than girls in the comparison group. Treated girls were at least twice as likely to have discussed money management issues with their parents, and Faulu girls were significantly more likely to correctly answer financial knowledge questions than girls in the comparison group (Population Council, 2011a).

A pilot programme has been carried out also in Uganda in November 2009-March 2010, with endline interviews taking place one year after baseline. Overall, the findings of the pilot evaluation are promising. In terms of financial behaviour, FINCA and Finance Trust girls were more likely to report that they had saved in the last six months with respect to baseline, with non-significant changes in the control group. Moreover, both FINCA and Finance Trust girls were more likely than the comparison group to have a savings plan and to have a budget, adjusting for age, religion, and baseline measures (Hallman, 2011; Population Council, 2011b).
**Faulu Kenya: Masomo 2B**

This programme was conducted by Faulu Kenya, a local MFI, and included financial education training for both Faulu clients and the general public. The evaluation aimed at gauging the effect of the programme in terms of knowledge, skills, attitude and behaviour regarding saving, investment, budgeting and debt management. Baseline and endline surveys of both clients and the general public have been complemented by the analysis of Faulu’s administrative data on its client’s savings and loans.

Comparing self-reported behaviour indicators for the ‘treated’ and ‘control’ groups before the training and one year afterwards, it appears that the training had a positive impact on households’ propensity to use a budget plan, a savings plan, and a loan management plan (in all cases the improvement was larger among the treated than among the control group). However, results are mixed over a number of aspects. For instance, clients’ knowledge of budgeting increased among the control group but decreases in the treatment. Moreover, according to the analysis of administrative savings account data the training does not seem to have changed clients’ savings amounts. The evaluation report mentions a number of limitations that may have weakened the results. First, the control groups may have been exposed to financial education interventions on television, radio and by other institutions taking place in the same period as the Faulu project. Second, transaction analysis was carried out only for the savings held at Faulu, and not for all the savings held by one family at any financial institution, meaning that the evaluation did not capture adjustments in saving behaviour that may have taken place through other institutions (Faulu Kenya, 2011b).

**South Africa**

**National Community Financial Education Workshops**

The Financial Services Board (FSB) of South Africa carried out an evaluation of its National Community Financial Education Workshops. These were interactive workshops targeted at low income adults in rural areas. The content of the programme included various issues, both at a general and a more advanced level (i.e., budgeting; credit/debt; saving; insurance; pension, as well as financial management; where to find information; making complaints).

The evaluation was carried out at the end of the workshops and three months after, and consisted of a feedback questionnaire delivered to participants in person. A helpline was also offered. The evaluation highlighted that participants gained an understanding of the budget process, and that they improved their behaviour regarding budgetary issues.

**Imali matters – Money Advice**

The Imali Matters project tested the viability and benefit of face-to-face support to consumers in three walk-in centres located in Cape Town, Durban and Johannesburg. The impact assessment was carried out through a number of different approaches (e.g. paper-based baseline survey; data on knowledge and behaviour collected at Imali centres before the consultation process; telephone follow-up survey; focus groups).

A comparison of pre- and post-intervention survey results, focus group discussions and credit bureau data indicates an improvement in both financial knowledge and self-reported behaviour along a number of dimensions (e.g. budgeting, making ends meet, planning ahead, loans and borrowing, selecting financial products and finances in general). However, the impact assessment report acknowledges the
difficulty of determining whether Imali had an impact on these indicators, or whether the effect was due to learning in conditions of financial distress. Overall, evidence of impact seems most pronounced with respect to reducing and managing debt, and increasing client confidence. The impact assessment also reports significant differences across offices, with the Cape Town and Johannesburg offices displaying better results in educating clients. On the one hand, it appears that these offices were more operationally efficient and were more focused on capacitating clients. On the other hand, the client base in Durban was noticeably poorer, making a fair comparison rather difficult (Eighty20 Consulting 2011b, 2011c).

Gender, Socioeconomic Status, and Youth HIV Risk and Enhancing the Economic, Health, and Social Capabilities of Highly Vulnerable Youth ("Siyakha Nentsha")

Both programmes were coordinated by the Population Council and targeted female and male youth living in poor, HIV-affected communities in the KwaZulu-Natal province in South Africa. The projects addressed youth vulnerabilities with training on life skills, financial literacy (budgeting, saving, planning, etc.) and HIV/AIDS prevention, treatment, and care.

The Gender, Socioeconomic Status, and Youth HIV Risk project was evaluated using a quasi-experimental design, where young men and women in the 16-24 age group were interviewed at baseline in 2005 and again two years later. Preliminary findings are encouraging in showing attitudinal and behavioural changes in financial matters (among others) among programme participants with respect to a control group. For instance, among young women 75 percent of participants had discussed financial decision-making two years after the training, while only 21 percent of non-participants had (up from 27 percent and 6 percent, respectively, at baseline). Overall, the effect of the training on the share of young people having discussed financial decision-making and on the share of young people using financial services from a bank was larger for the group of treated than for the control group – for both men and women. However, the effect of the training on the share of people having savings was larger for the treated than for the control only among young women, but not among men (Hallman et al., 2007).

The evaluation of the Siyakha Nentsha project was conducted through surveys before and after programme implementation in schools receiving the training versus a comparison school. The survey asked questions about families, schooling, work experience, attitudes and values, as well as health knowledge and behaviours. The financial education and career guidance offered by the programme appears to have had promising results. Compared to the control group, all Siyakha Nentsha participants were more likely than those in the control group to have improved budgeting and planning skills, and were more likely to have attempted to open a bank account. Moreover, among Siyakha Nentsha boys, those who received financial education were more likely to have reported undertaking an income-generating activity between survey rounds (Hallman and Roca, 2011).

Financial Literacy and Mineworkers: Nakekela Imali!

This evaluation tests the extent to which a two-day financial education workshop provided to mineworkers in South Africa impacts their financial knowledge and behaviour. Miners were randomly assigned to treatment and control groups taking into account their living arrangements, so as to allow the measurement of potential spill-over effects (i.e., miners shared apartments in the mines or in off-site accommodations). Self-reported data from baseline and endline surveys have been complemented by administrative data on absenteeism (collected by the mining houses) and on payments, savings and borrowing transactions (collected by the partner bank UBK on programme participants who are active clients).
Post-workshop feedback shows that participants value the content of the training and believe it will positively impact their financial decision-making. Preliminary findings from the endline survey data indicate that miners assigned to the workshops were more likely to have formulated a financial plan, created a household budget, and “invested” in their homes (i.e., via improvements and repairs). There is somewhat weaker evidence that ‘treated’ individuals had fewer impulse purchases that they regretted later on. Finally, the preliminary survey data analysis does not allow conclusions to be drawn about spillovers or about the impact on key financial behaviours, such as saving and borrowing (IPA, 2012b).

Financial Freedom: Radio Financial Literacy Project

This project was developed by Bright Media for the South African Insurance Association (SAIA) and was funded by the Financial Education Fund (FEF) to deliver insurance education through a radio drama. The programme was broadcast through four radio stations, addressing audiences in four different languages and using the audience of a fifth station not broadcasting the drama as a comparison group. The programme also involved call-in sessions after each episode managed by experts proficient in the languages of the stations (with no mention of specific companies).

The impact of the project was measured through interviews before and after the broadcast. The findings suggest a positive impact of the radio drama on financial knowledge, confidence and self-reported behaviour (e.g. budgeting, saving regularly and paying bills on time). The identification of the impact of the programme was made more difficult by the fact that another financial literacy programme was broadcast in the same areas in the same period. However, the SAIA programme was mostly focused on insurance topics and the fact that the evaluation highlighted promising results in relation to insurance (e.g. awareness of insurance products at endline was significantly higher, with an increase in the desire to have short term insurance products with respect to baseline) lends support to the programme effectiveness (Pearson and Bruynse, 2011; SAIA and Bright Media, 2011b).

Postbank/Wizzit Financial Literacy Project

The project was conducted in 2009-2010 by a consortium led by Postbank, a division of the South African Post Office, and Wizzit Bank. The programme delivered one-day in-classroom financial literacy training to over 10,000 trainees in four regions of South Africa. The measurement of training impact focused only on banking (e.g. opening of bank accounts, number and value of withdrawals, use of more or less costly channels for purchases and withdrawals, etc.).

The available evidence indicates no banking behavioural change, as the training programme did not induce either more bank accounts being opened or improved use of existing financial services. The evaluation report mentions several reasons why this might have been the case. First, a one-off training covering a wide range of financial services and general matters is more likely to provide background understanding rather than bringing about behavioural change in one specific financial domain. Second, trainees were not consistent with the profile defined ex-ante. Training groups included many more unemployed and women than originally planned for, with trainees being too poor to engage with banking (InsightWorx, 2011).

Bubomi – Absa

The programme delivered classroom-based interactive workshops to low-income consumers to teach them how to better manage their financial affairs. An evaluation exercise was conducted to test the impact of the programme in a rural village area, comparing village residents who were (treatment group)
or were not (control group) exposed to the training programme. The assessment was performed over four dimensions: perceived financial knowledge; financial confidence; financial attitudes; and financial management behaviour.

According to the evaluation findings, programme participants were, on average, statistically significantly more likely to display better perceived financial knowledge; be more confident when performing basic financial activities; display financial attitudes more oriented towards the long term and towards sound financial behaviour; and report to manage their finances more responsibly (Tustin, 2010).

Uganda

Uganda Microfinance Consumer Education Programme

The Uganda Microfinance Consumer Education Programme was delivered in 2005-2007 through mass media, MFIs and training institutions. Baseline and mid-term surveys (six months after the beginning of the program implementation) were undertaken in districts where the financial education campaign took place.

The mid-term survey reports an improvement in the awareness of the presence of financial institutions in the area and an increase in the number of respondents having a savings account. The research also reveals a shift in attitude in regard to consumers’ rights and obligations, accompanied by an increasing demand for microfinance services in terms of short-term loans. Moreover, the percentage of respondents who belong to SACCOs doubled from pre-exposure to the mid-term study (REEV Consult International, 2007).

Starting a lifetime of savings

The project involved the delivery of two programmes through pre-existing youth clubs. Evaluation was carried out through a baseline and an endline survey. Upon completion of the baseline survey, 240 youth clubs were randomly assigned to one of four treatment groups: 1) financial literacy training; 2) club savings accounts; 3) financial literacy training and club savings accounts; 4) no treatment (control).

The endline survey included a series of questions assessing respondents’ knowledge of financial concepts and regulated banks, as well as saving and borrowing behaviour. Both the ‘Financial Education and Account’, and the ‘Financial Education’ groups experienced significant increases in their financial knowledge and bank knowledge with respect to the comparison group, while the account-only group did not experience any change in knowledge with respect to the control. In terms of saving behaviour, the endline report shows an increase in the total amount saved among the ‘Financial Education and Account’ and ‘Financial Education’ groups with respect to the comparison group. All three treatment groups improved over the comparison group in the number of formal savings locations, and in the total number of savings locations reported. Finally, there was no detectable impact of the different treatments on borrowing behaviour, as measured by the number of borrowers, number of borrowing instances, or total amount borrowed (IPA, 2011c).

Tegerra Ssente Zzo (Understand your Money)

The project targeted 100 beneficiaries from a MFI, who used a log-book for six months to track their net worth and personal budget. Participants were also supported by a counsellor from their MFI through regular meetings.
The evaluation adopted a ‘before and after’ design in which a baseline questionnaire was administered to the beneficiaries and a control group of 50 customers at project inception. The questionnaire was then re-administered to the same project beneficiaries and to a new control group at the end of the project in order to investigate any recognizable changes. A number of indicators to track and measure anticipated changes in saving, expenditure, budgeting, and general loan management skills were collected. The comparison of the programme participants before and after the interventions reveals an improvement in their (self-reported) ability to budget, save and track expenses. However, the endline report acknowledges that the short project duration and the small number of beneficiaries limit the possibility to generalize results (FinLit Foundation, 2012; Research Moguls, 2012b).

**Zambia**

**Camfed – Financial Education for young women**

The project aimed at delivering financial education training to young women in rural communities through a cascade training model (where core trainers trained peer educators, who in turn trained community members). The process evaluation revealed that the cascade model was efficient to reach the target audience in a short period of time. Moreover, quarterly meetings among all Peer Educators within a district turned out to be useful for sharing knowledge, feedback, and training improvement.

Impact evaluation was carried out through a baseline and an endline survey administered to samples of ‘treated’ and ‘control’ women. The results show that trainees improved their knowledge, attitudes and behaviour in a number of aspects (i.e., saving, credit/borrowing, and banking), while in many cases comparison women did not report any significant change. However, the percentage of respondents who have opened a new savings account did not change significantly among either treatment or control groups. Anecdotal evidence indicates that in some of the districts where financial institutions are not available, the training made some women confident enough to start informal saving groups and to advocate the introduction of banking services in the area (Kasonka and Mutelo 2011).
5. Financial education initiatives by country

Summary

The state of development of financial education initiatives is quite heterogeneous across African countries.

The government of Ghana adopted a National Strategy for Financial Literacy and Consumer Protection in the Microfinance Sector in 2009, and is planning to enhance financial education in schools. Other programmes are implemented by NGOs, sometimes involving financial institutions.

In Namibia, the Ministry of Finance officially launched its Financial Literacy Initiative in 2012, and the Namibia Financial Institutions Supervisory Authority carries out a consumer education initiative.

The National Treasury of South Africa is coordinating the development of a national financial education strategy for South Africa. The Financial Services Board (FSB) has been involved in financial education activities since 2001 through its Consumer Education Initiative. The FSB has also participated in the OECD’s international financial literacy measurement pilot survey and has conducted focus group research on consumers’ knowledge of insurance. Also the National Credit Regulator (NCR) carries out a consumer education programme. Moreover, financial education is integrated in the school curriculum of some subjects in all grades. Several other financial education initiatives are carried out by NGOs and by the financial sector.

The Central Bank of Uganda is working with various stakeholders to develop a National Strategy for Financial Literacy and has promoted a financial literacy survey. The Capital Markets Authority has embarked on programmes to increase public awareness about capital markets. The Capital Markets Authority and the Central Bank partnered with the financial sector in the FinLit Foundation, carrying out other financial education programmes. Several other organisations from the non-profit and private sectors have implemented financial education initiatives.

The Central Bank of Lesotho carries out a consumer education initiative, and the Securities Commission of Zimbabwe is undertaking various investor education programmes. The Central Bank of Kenya, the Reserve Bank of Malawi, the Bank of Tanzania, and the Bank of Zambia are developing national strategies for financial education in their countries. Other countries featuring financial education initiatives include Botswana, Burkina Faso, Burundi, Egypt, Madagascar, Mali, Morocco, Nigeria, Rwanda and Senegal.

This section briefly describes the state of financial education in each surveyed country, based on information available. For every country, initiatives by national public bodies (e.g., governments, central banks or financial sector regulators) are described first. These are followed by NGOs’ programmes, and then by private sector ones.

In some countries, public authorities took the lead by engaging in the development of national strategies for financial education, even though many of them have not been fully implemented (or fully designed) yet. In most countries financial education initiatives provided by public authorities, NGOs, and the private sector coexist.

Ghana

The government of Ghana together with its development partners launched an extensive Financial Literacy Program in 2008 to create awareness of financial topics. In January 2009, Ghana’s National Forum on Microfinance adopted the National Strategy for Financial Literacy and Consumer Protection in
the Microfinance Sector. The three main activities carried out include: a National Financial Literacy Week, road shows in rural areas, and the development of educational material on loans, saving, (micro) insurance and investment. One of the key activities of the National Financial Literacy Week is the organisation of National Quiz on Finance for Senior High Schools, testing Senior High School students’ levels of literacy in Finance. In addition, the Ministry of Finance and Economic Planning is enhancing the financial literacy content of the Senior High School syllabuses, and is planning to do the same for Upper Primary and Junior High Schools curriculum.

Moreover, the Support Programme for Enterprise Empowerment and Development (SPEED) was set up in 2003 by the government of Ghana, the Bank of Ghana, the German Agency for International Cooperation (GIZ), and the Danish International Development Agency (Danida) to sustain private sector development. The SPEED programme undertook financial education initiatives including road shows and radio programmes, complemented by print media on savings, loans, investment, and insurance (MasterCard Foundation et al., 2011; SPEED Ghana, 2009).

The stock-taking exercise identified a few financial education programmes provided by Ghanaian and international NGOs and funded by the FEF. The ACDEP Financial Education Project (AFE) is coordinated by the Association of Church-based Development NGOs (ACDEP) and provides financial literacy training to small-scale farmers to help them access financial services and develop business plans for their cash-crop production. The programme involved the training of trainers and the subsequent training of target farmers, and covered topics such as setting financial goals; budgeting and managing money; loans and over-indebtedness; comparing savings services and making a savings plan; and insurance (Alebikiya, 2011; Morna and Anamoh 2010, 2011). The project Evaluating the Efficacy of School-based Financial Education Programmes assesses the effectiveness of two financial education school trainings (the Aflatoun Social and Financial Education Curriculum, addressing financial education as well as individual/community rights/responsibilities and social cohesion/group formation, and a financial education-only curriculum) on children’s knowledge, behaviours and attitudes. The programme involves training and access to a saving scheme, and is delivered to primary school students in some schools in three districts (FEF, 2012; IPA, 2011a, 2012a).

Two other projects involve financial institutions to a great extent. An opportunity for all, Financial Education in Africa is coordinated by Opportunity International and is implemented by local commercial MFIs in Ghana, Malawi, Mozambique and Uganda. The project aims at increasing awareness and use of a range of financial services, as well as promoting a better management of credit/debt, via multi-media financial literacy training modules. Financial education is delivered to clients in banking halls and to rural communities by means of portable devices (FEF, 2012; Pennington and Gustafson, 2011; Pennington, Gustafson, and Ngo, 2011). The project Savings Account Labelling and Financial Literacy Training for Susu Customers in Ghana is implemented by a community development financial institution (Mumuadu Rural Bank) in partnership with Innovations for Poverty Action (IPA) to study the impact of financial literacy training and access to a financial product. Randomly selected customers of susu agents at Mumuadu Rural Bank are offered a savings product that allows the labelling of funds within an account, so that deposits can be directed to a specific goal, such as health, education or business savings.12 In addition to

12 “susu” agents are traditional savings collectors who collect daily small sums of money from their customers. Typically susu collectors return the funds to their customers at the end of the month in exchange for one day’s worth of collections. As banks moved into rural areas, they have formalized susu collection, paying their agents on commission instead of charging customers a fee.
the labelled accounts, a random selection of participants receives financial literacy lessons. IPA looks at how financial literacy education impacts the decision to open a labelled savings account, and which combination of account type and education results in higher take-up and larger and more frequent deposits (IPA, 2011b; Poverty Action Lab, 2011).

Kenya

The Central Bank of Kenya is taking steps to develop Kenya's National Strategy for Financial Education, in partnership with the Financial Sector Deepening (FSD) Trust. Several stakeholders, including the Central Bank itself, various Ministries, the FSD, NGOs, financial institutions, and other private sector companies joined the Financial Education and Consumer Protection Partnership (FEPP) to establish the foundations for a coordinated financial education programme in Kenya. Other initiatives implemented by public authorities include a pension education campaign carried out by the Retirement Benefits Authority (Kwena, 2009).

The FSD commissioned a review to gain a better understanding of the potential approaches that could be taken to measure financial literacy in a developing country where the vast majority of the population does not use formal banking services (Atkinson and Kempson, 2008). The report also provides preliminary indicators of financial literacy in Kenya by carrying out a secondary analysis of FinAccess 2006 data.

The World Bank developed the Social Network, Financial Literacy and Index Insurance project in Kenya and India with the goal to study the impact of financial literacy training on farmers’ decision to purchase index-based weather insurance (see the glossary in Appendix C for details). As one of the reasons for low demand for this type of insurance may be the limited understanding of the product among potential consumers, the programme provides small-scale farmers with comic books explaining the workings of the insurance in an accessible and relevant manner (WB, 2012).

The project Promoting Financial Capability in Kenya and Tanzania through Consumer Education and Protection Delivery by Consumer International aims at improving the financial knowledge of consumer organisations that provide financial advisory services by training consumer advisors and establishing two Consumers Advisory Centres (one in Kenya and one in Tanzania) where consumers are offered one-to-one counselling and education on financial issues by trained financial advisors. The project also included an awareness-raising campaign through local radio stations and national TV (Consumers International, 2012; ESF Apex, 2011, 2012).

Microfinance Opportunities (MFO), in collaboration with the ILO Microinsurance Innovation and the Association of Kenyan Insurers, delivered insurance education through a radio campaign in 2010. The programme was based on a MFO curriculum, and aimed at increasing awareness and improving attitudes towards risk management and insurance (Microfinance Opportunities, 2011b).

Other financial education initiatives involve both non-profit organisations and the private sector. Safe and Smart Savings Products for Vulnerable Adolescent Girls in Kenya and Uganda is an ongoing project conducted in Kenya and Uganda by the Population Council in collaboration with international NGOs (Microfinance Opportunities, MicroSave Consulting) and local banks/MFIs, and is funded by the FEF and the Nike Foundation. The programme targets young females, and aims at empowering girls from an economic point of view by providing (i) weekly group meetings with their savings group and a female mentor in ‘safe spaces'; (ii) training on financial education; (iii) and access to an individual savings account with no opening balance or monthly fees at local banks (Faulu Kenya and K-Rep Bank in Kenya; FINCA-
The financial literacy curriculum is an adaptation of the Global Financial Education Programme (GFEP) for young people and is differentiated for the 10–14 and 15–19 age groups. A number of delivery channels for financial education have been developed, including a simplified trainer’s guide, a savings diary, and a self-facilitated workbook (Austrian, 2011; Hallman, 2011; Population Council, 2011a, 2011b).

*Makutano Junction* is a soap opera addressing financial education issues. It is (partially) funded by the FEF and is crafted by Mediae, a development organisation, as a development communication tool, highlighting health, environmental and social issues. Some episodes of series 9 and 10 also address financial education issues. At the end of each episode, the audience can send a text message in order to receive a leaflet on the content of that particular episode. The leaflets cover topics such as budgeting, savings, investments and debt management. When the episode is related to banking services, the leaflets also include an application allowing viewers to sign up at a specific bank (FEF, 2012).

The programme *Faulu Kenya: Masomo 2B* – described above – is funded by the FEF and implemented by the local MFI Faulu. The programme is supported by the Financial Education and Consumer Protection Partnership (FEPP), a public-private partnership. It has both a train-the-trainer and a training component, targeted at both clients and members of the public. Training is offered for a fee. In addition, Faulu developed financial education DVDs (in partnership with Mediae) and leaflets (Faulu Kenya, 2011a, 2011b).

Finally, some programmes involve mainly the private sector. Equity Bank and Equity Building Foundation delivered financial literacy training to youth and women micro-entrepreneurs in 2009-2010 (with the support of the MasterCard Foundation) (FSD Kenya, 2008). Moreover, Smart Youth Investments provides financial education online focusing on the youth. Since 2007, it has provided investor education to students in universities and colleges by allowing them to interact in an online simulator of the Nairobi Stock Exchange (Smart Youth Investments, 2012).

**Lesotho**

The Central Bank of Lesotho (CBL) has developed a consumer education initiative to ensure that consumers can make informed decisions about financial products and services, as well as identify and avoid scams. The programme is meant to sensitise the general public on a number of issues, including payment instruments, opportunities for investment, insurance, money lending, frauds, consumer rights and dispute resolution. The campaign involves other stakeholders (i.e., Government, non-for-profit organisations, and the private sector) and exploits various delivery mechanisms, such as radio and TV talk shows, media advertising campaign, “Consumer Tips” columns or sections in print and radio media, fact sheets (in both Sesotho and English), consumer brochures, as well as the CBL website.

**Malawi**

Consumer protection and education are among the main objectives of the Reserve Bank of Malawi (RBM) in relation to regulation and supervision of banking, pension, insurance, microfinance, and capital markets financial institutions. In 2010, the RBM laid the foundation for the development of a National Framework for Financial Literacy in Malawi, by convening a National Committee on Financial Literacy, comprised of Government ministries, academia, civil society, donor/development partners, and stakeholders from the financial sector. The National Strategy will target existing users of financial services, the unbanked, and students in primary, secondary and tertiary education. Moreover, the Bank is involved in the Financial Sector Technical Assistance Project (FSTAP) together with the Malawi
Government, and development partners (the World Bank, DFID and USAID). One of the components of this project is to enhance financial education and consumer protection in Malawi.

Moreover, Malawi is among the countries included in the World Bank financial capability measurement project.

The project An Opportunity for All, Financial Education in Africa by Opportunity International – already described in the section about Ghana – is implemented also in Malawi by the Opportunity International Bank of Malawi (OIBM) (FEF, 2012; Pennington and Gustafson, 2011).

**Morocco**

In Morocco, the Bank Al-Maghrib plans to complement its financial inclusion strategy with financial education programmes.

The Mennonite Economic Development Associates (MEDA) implements the YouthInvest project financed by the MasterCard Foundation. Through the project, MEDA has been working in Morocco and Egypt to deliver training in the areas of financial literacy and life skills. Given the high rate of youth unemployment in both countries, the project aims to foster entrepreneurship and workforce readiness. One of the programmes within the YouthInvest project is called ‘100 Hours to Success’, which provides training in life skills, financial skills and entrepreneurship to young people age 15-24, as well as access to a savings account (Harley et al., 2010).

The Casablanca Stock Exchange launched the programme L’école de la Bourse (the School of the Stock Exchange) to familiarize bank staff, as well as consumers at large, with financial products and the workings of the stock market (Casablanca Stock Exchange, 2010).

**Namibia**

In 2009 the Ministry of Finance initiated the Financial Literacy Initiative (FLI) with support of the GIZ, acting on behalf of the German Ministry for Economic Cooperation and Development. The Initiative is a platform that brings together stakeholders from the public and private sector, academia, civil society, and development partners to enhance financial education for individuals and micro-, small- and medium sized enterprises. In 2012 the FLI was officially launched and extended its educational campaign activities to the Coastal, Northern and Southern regions of the country. The main theme of the campaign covers financial matters around saving, budgeting and spending behaviour. It includes interactive approaches such as street theatre, TV and radio shows, cooperation with schools, workplace activities, and training for entrepreneurs, supported by print material such as posters, flyers, and/or booklets (Financial Literacy Initiative Secretariat and Embassy of the Federal Republic of Germany, 2012; Financial Literacy Initiative, 2012).

The Namibia Financial Institutions Supervisory Authority (NAMFISA)’s Consumer Education initiative was launched in 2008 to increase consumers’ awareness about rights and responsibilities around financial products in order to improve their financial literacy. It delivers consumer education information through various modes of communication, including road shows; newspaper, magazine and radio adverts; work place and youth programmes.

Moreover, Namibia is among the countries included in the World Bank financial capability measurement project.
Nigeria

In Nigeria, financial literacy development is one of the objectives of the Financial System Strategy 2020 led by the Central Bank of Nigeria.

The country’s interest in financial education issues is revealed also by the First National Symposium on Financial Literacy organized by the Development Initiatives Network to prioritise financial literacy within the financial markets regulatory framework (Central Bank of Nigeria et al., 2010).

The World Bank and the Central Bank of Nigeria, in collaboration with a local NGO, have developed an entertainment programme as a financial education tool with funding from the Russian/World Bank/OECD Financial Literacy and Education Trust Fund. The initiative aims at enhancing consumers’ awareness and understanding of rights and responsibilities of financial institutions and consumers themselves through the movie ‘The Story of Gold’, where two identical twins receive the same financial endowment but live different financial lifestyles. The movie aims to teach low income individuals with limited formal education some concepts about financial planning, saving and responsible borrowing (Iarossi, 2011; WB, 2012).

Rwanda

The Savings Banks Foundation for International Cooperation (SBFIC) – a part of the German Savings Banks Finance Group – in collaboration with the Association of Microfinance Institutions in Rwanda (AMIR) launched a program of sensitizing children to making deposits and savings at an early age. The programme involved the training of 300 teachers in the country who can now educate children on saving matters and on financial education (AMIR, 2011).

Moreover, the Banque Populaire du Rwanda (BPR) launched a financial literacy programme, introducing financial education topics in the Urunana radio soap opera, developed by Urunana Development Communication, a local NGO specialised in development communication strategies. The soap is intended by BPR as a way not only to raise awareness of financial issues, but also to increase its brand visibility among the general and the unbanked population (Banque Populaire du Rwanda, 2011).

South Africa

The National Treasury of South Africa has recently developed a draft policy on financial education for South Africa which will be made available for public comment. The policy proposes that a coordinating body be established by the National Treasury to develop and coordinate the implementation of a national financial education strategy for South Africa under the guidance of the National Treasury.

The FSB undertook several financial literacy measurement initiatives to guide the development of the national strategy and of related legislation. The FSB participated in the OECD’s pilot survey aimed at developing a questionnaire to gather internationally comparable data on financial literacy. Furthermore, the FSB has commissioned a national financial literacy baseline study, so that the information from this study can be used to draft a multi-year national financial education strategy. This study has been expanded to take into account the large informal sector in South Africa. The data has been collected and a report is expected in the first quarter of 2012. In addition, the FSB has conducted focus group research to determine consumer knowledge of long and short-term insurance as well as to find out through which means/channels they would best like to receive educational material. This study was undertaken in preparation for the introduction of micro-insurance legislation. The data for this study are being reviewed.
by the partners. Moreover, the Financial Services Board (FSB) has been involved in financial education activities since 2001 through its Consumer Education Initiative. This long-term initiative aims at providing education on saving and financial management, as well as what consumers should know about financial products and services, and ensuring consumers are cautious in purchasing financial products and know their rights and responsibilities. The initiative is carried out through a number of different channels, including community outreach and awareness workshops, TV, radio, and road-shows. The FSB has been actively involved with the Departments of Education in coordinating the production of curriculum-based teaching materials and initiating workshops for teachers to facilitate the use of the financial education teacher resources in the classroom.

The National Credit Regulator (NCR) carries out a parallel consumer education programme. This initiative consists of an awareness creation component and an education component. The awareness campaign is accomplished through print, broadcast, and electronic media. The education campaign is implemented by means of capacity building workshops with various stakeholders (i.e., industry, NGOs, trade unions, government departments, parliamentary constituency offices, and employers), who are trained so that they can advise and educate a wider audience.

Financial literacy is integrated in the school curriculum in all grades (1-12). It is not taught as a stand-alone subject, but it is included in the daily curriculum in a number of learning areas (e.g., Economic and Management Sciences, and Mathematical Literacy).

The World Bank and the National Debt Mediation Association (NDMA) have been involved in the design and evaluation of a pilot entertainment education initiative focusing on debt and over-indebtedness to be included in the soap opera Scandal! (Losse-Mueller and Zia, 2011; WB, 2012). Moreover, the World Bank is involved in the evaluation of one day-seminars based on the Old Mutual ‘On the money’ programme delivered to low-income people (WB, 2012).

NGO-provided initiatives include various programmes. Two of them are carried out by the Population Council, both with a financial education component: Gender, Socioeconomic Status, and Youth HIV Risk, and Enhancing the Economic, Health, and Social Capabilities of Highly Vulnerable Youth (“Siyakha Nentsha”). The first programme was coordinated by the Population Council and funded by UK DFID, USAID, UNICEF, and several private foundations. It took place in the KwaZulu-Natal province in 2004-2007 and targeted female and male youth aged 14-24 living in poor, HIV-affected communities. The project addressed youth vulnerabilities with a multi-dimensional programme featuring three components: (i) “safe spaces” and social network in order to reduce social isolation; (ii) financial literacy training on budgeting, saving, planning, etc.; (iii) knowledge of HIV/AIDS prevention, treatment, and care. The second programme was similar, but took place from 2007 onward (Hallman et al., 2007; Hallman and Roca, 2011).

Moreover, the non-for-profit organisation SaveAct provides support for the formation of saving and credit groups (SCGs) and delivers financial education and life skills training to group participants before they begin their first saving cycle (Barber, 2011).

A consortium consisting of the Department of Trade and Industry, Finmark Trust, African Bank and the Credit Information Ombudsman established the Money Advice Association, which is responsible for implementing the Imali Matters Pilot Project. The project delivered free and independent face-to-face counselling to consumers in three walk-in centres located in Cape Town, Durban and Johannesburg. It is financed by the FEF (Eighty20 Consulting, 2011a, 2011b, 2011c).
Public-private initiatives in South Africa include activities implemented by the FSB in collaboration with the South African Insurance Association (SAIA). These initiatives included financial education for commuters and for consumers in shopping malls. In the first case, the programme delivered financial literacy and consumer education messages via radio and TV screens at taxi ranks, by means of CD/tapes played in vehicles, in kiosks, and so on. In the second case, the project included the delivery of information and leaflets by trained staff in malls, as well as financial shows. In all cases the content was taken from consumer education booklets developed by the FSB, covering money management, debt issues, short-term insurance, and consumers’ right and responsibilities (SAIA, 2008).

Two local financial institutions engaged in financial education projects funded by the FEF. First, the Postbank financial literacy project was conducted in 2009-2010 by a consortium led by Postbank, a division of the South African Post Office, and Wizzit Bank. The programme had the primary objective to improve financial access of those who are excluded or are marginally participating in the formal financial system by delivering one-day in-classroom financial literacy training to over 10,000 trainees in four regions of South Africa. Although the training material was neutral towards brands and broad-based (covering money management, saving, borrowing and risk management), Postbank and Wizzit branding was used (e.g., to advertise the programme) (FEF, 2012; InsightWorx, 2011). Second, the Nakekela Imali! (Take care of your money!) provides training workshops at two South African mining houses. The programme is led by Ubank and consists of two-day on-site training workshops, where participants also receive training material to take home and share with their families (IPA, 2010, 2012b; Blair and Poppleton, 2011).

Financial industry associations are involved in financial education to a large extent. For instance, SAIA is also sponsoring community consumer education workshops for low-income people, and the “Financial Freedom” radio dramas on financial literacy and insurance themes (partially funded by the FEF). Even though the contents of the radio broadcast are generic and non-branded, before and after each episode companies with relevant products are allowed to give a message and a toll free number to enable listeners to call and find out more about products on offer (Pearson and Bruynse, 2011; SAIA and Bright Media, 2011a, 2011b). The Banking Association of South Africa (BASA), in collaboration with the South African Savings Institute (SASI), launched the Teach Children to Save South Africa programme in 2008. Within the programme, volunteer bankers and financial sector professionals deliver one-hour savings lessons in grades 4-7 nationwide (BASA, 2011).

Among financial sector initiatives, Absa bank delivers the Bubomi financial literacy programme through classroom-based interactive workshops to low-income consumers to teach them how to better manage their financial affairs (Tustin, 2010). In addition, South Africa is one of the countries where the financial education initiatives of two large international financial corporations take place. First, Visa International implements road shows on the workings of debit cards, financial management issues, banking systems, etc. in Botswana, Kenya, South Africa, Uganda, Zambia (and in other non-African countries) (VISA, 2012). Second, Citigroup funded the Global Financial Education Program in South Africa and Morocco (among African countries), which included a financial literacy curriculum, developed by Microfinance Opportunities and Freedom from Hunger, and awareness campaigns to disseminate the content of the curriculum (Citi Foundation, 2010).

Tanzania

The Bank of Tanzania is in charge of the Financial Literacy Strategy for Tanzania, to be implemented through the Financial Sector Deepening Trust (FSDT). Moreover, Tanzania is among the countries included in the World Bank financial capability measurement project.
Two other programmes developed by international NGOs take place in the country. The *Empowerment and Livelihood for Adolescents (ELA)* is implemented in Tanzania and Uganda by the Bangladesh Rural Advancement Committee (BRAC). It provides financial literacy training and other forms of training (e.g. income generation and life skills), as well as access to microfinance, to young girls living in villages (BRAC, 2009, 2010a, 2010b). The Consumers International’s project *Promoting Financial Capability through Consumer Education and Protection Delivery* – described in the section about Kenya – is also implemented in Tanzania (Consumers International, 2012).

**Uganda**

The Central Bank of Uganda is working with various players in the financial industry to develop a National Strategy for Financial Literacy. A report “Towards an Effective Framework for Financial Literacy and Financial Consumer Protection in Uganda” was launched in 2011 to map current initiatives in the fields of financial literacy and financial consumer protection. The report provides a roadmap to strengthen collaboration and coordination between the various stakeholders to enhance financial literacy in Uganda (Bank of Uganda, 2011).

Moreover, the Central Bank of Uganda is financing the FinLit Foundation to carry out a financial literacy survey. This survey is aimed to ascertain financial literacy needs and will be used to develop recommendations and strategies to enhance financial literacy in the country.

The Capital Markets Authority (CMA) has embarked on programmes to increase public awareness about capital markets. The CMA is working with the National Curriculum Development Centre and the Uganda National Education Board to introduce education on saving, investment and capital markets in secondary schools within the Entrepreneurship subject. Other initiatives to sensitise students on capital markets issues include school and university seminars, and inter university and secondary school competitions. Among the activities that CMA has carried out for a larger public are exhibitions and workshops for investors’ awareness, workplace seminars and capacity building activities for financial journalists.

The Capital Markets Authority and the Central Bank of Uganda partnered with financial sector players (including the Uganda Insurance Commission, Uganda Insurers Association, Uganda Insurance Brokers Association, Uganda Bankers Association, and Association of Microfinance Institutions of Uganda, AMFIU) in the Financial Literacy Foundation (FinLit) Uganda. The FinLit Foundation aims at improving financial literacy and consumer protection and at increasing participation in savings and investments in financial markets. Aside from conducting the financial literacy survey, the FinLit carried out other projects. These include the personal finance log-book Tegerra Ssente Zzo; financial literacy clinics in the country’s major towns; an annual Financial Literacy Week; and free publications on insurance, investing, saving and budgeting, capital markets, banking and loans. In particular, the *Tegerra Ssente Zzo (Understand your Money)* involved the delivery of a personal finance log-book to 100 low-income clients of a microfinance institution who used the log-book for six months to track their net worth and personal budget. Participants were given training on how to use it and were supported by a counsellor from their microfinance institution through regular meetings. During these meeting the counsellor would evaluate

---

13 The measurement project is financed through the Central Bank of Uganda Five Year Financial Market Development Plan funded by the World Bank through the Private Sector Foundation Uganda.
the consumers’ financial situation with the aid of a software package and provide recommendations on improvement (FinLit Foundation, 2012; Research Moguls, 2012a).

Several organisations carried out awareness campaigns in Uganda. The USAID promoted a savings awareness campaign under its Rural Saving Promotion and Enhancement of Enterprise Development (Rural SPEED) project. The campaign took place in 2006 and included radio skits and ads, seminars, and live road shows promoting saving and the use of financial services (USAID, 2007). An awareness campaign is also the main delivery channel of the consumer education programme of the Financial Sector Deepening project Uganda (FSDU), established by the UK DFID. The FSDU campaign took place in 2007 and dealt with knowledge of consumer rights and responsibilities, and types of financial institutions and products (FSDU, 2007). The Association of Microfinance Institutions of Uganda (AMFIU) carried out a parallel campaign working with MFIs and other institutions, on financial literacy and on the rights and responsibilities of Savings and Credit Co-operatives (SACCOs) members (MasterCard Foundation et al., 2011).

Various other initiatives have combined financial education training with access to financial products. *Starting a lifetime of savings* is coordinated by IPA, in collaboration with local MFIs and NGOs. It promoted the saving behaviour of young people by delivering them a custom financial education curriculum and/or by encouraging them to access a youth group savings account (IPA, 2011c). Similarly, *AssetsAfrica* delivered financial education to poor people (together with other forms of training, including business planning and bookkeeping) and allowed them to access a saving account eligible for a matching upon reaching specific saving goals (similar to Individual Development Accounts, IDAs, in the US) (Chowa and Ansong, 2010). Finally, *Safe and Smart Savings Products for Vulnerable Adolescent Girls in Kenya and Uganda* by the Population Council combines financial education with access to individual savings accounts, as described for Kenya (Austrian, 2011; Hallman, 2011; Population Council, 2011a, 2011b).

Other projects implemented in the country include the *Adolescent Development Programme* (described in the section on Tanzania), and *An opportunity for all, Financial Education in Africa* (described in the section on Ghana). Further, the Private Education Development Network (PEDN) promotes youth empowerment through entrepreneurial, financial, and business skills programs in communities, primary and secondary schools (MasterCard Foundation et al. 2011).

**Zambia**

The development of a National Financial Literacy Strategy is led by the Bank of Zambia, in partnership with the Pensions and Insurance Authority and the Securities and Exchange Commission, and with the assistance of the UK DFID’s Financial Education Fund (FEF). This strategy is being hosted under the Financial Sector Development Plan (FSDP) which is a comprehensive government plan aimed at strengthening and broadening Zambia’s financial sector. The FSDP, whose Secretariat is domiciled at the Bank of Zambia, focuses on, among others, facilitating a dynamic and inclusive financial sector that supports all aspects of the economy. Moreover, the Ministry of Education, Science and Vocational Training, following input from the FSDP secretariat and related stakeholders, is revising the national school curriculum so as to incorporate financial education. The revised school curriculum is due to be piloted in 2012 with nationwide implementation in 2013. Finally, Zambia is among the countries included in the World Bank financial capability measurement project.

*Financial education for young women in rural Zambia* is another financial education programme financed by the FEF and implemented by the Camfed Association. It focused on empowering young women aged 16-35 years, across eight rural Zambian districts with economic independence and life
choices through financial literacy training. The programme reached more than 10,000 young women over two years. Training was delivered by peer trainers from the Camfed Association network of young women (Cama), using a cascade training model (e.g., training a number of Core Trainers and Peer Educators, who in turn train other women directly in each district) (FEF 2012; Hamweemba 2011; Zivetz and Synovate, 2010).

Private sector initiatives include those of Zanaco bank. Zanaco has been implementing a financial education programme called Financial Fitness as part of its corporate social responsibility since 2008. The programme has three main target groups: children and youth; adults, including the bank’s employees; and small and medium entrepreneurs. The programme for children is targeted at pupils in grades eight and nine in government schools, and is delivered as an extra curriculum activity. The delivery of financial education to adults is carried out mainly through mass media (radio and newspapers), while for Zanaco staff and SMEs it is delivered through training workshops on financial literacy and business management (Musona et al., 2011).

Zimbabwe

The Securities Commission of Zimbabwe (SECZ) is undertaking various investor education programmes designed to inform and sensitise the investing public on the workings of Zimbabwean capital markets. To date, the SECZ has been involved in various activities: it has partnered with the Ministry of Labour and Social Services in delivering consumer education programmes in schools, and it participates in various expo, workshops, conferences, and seminars throughout the country. Moreover, the SECZ is responsible for the development of financial literacy material (Career opportunities in capital markets; A guide to investing in capital markets; Capital markets in Zimbabwe). In addition, the SECZ is in the process of developing other financial literacy material targeting various groups.

Other countries

In Botswana, all initiatives found involve the private sector to some extent. Barclays Bank of Botswana launched a financial literacy campaign in 2010 consisting in training sessions for various low-income groups (Barclays Bank of Botswana, 2010). Moreover, Stanbic bank is collaborating with the Ministry of Education and the Botswana National Library Services to introduce financial literacy booklets, based on Stanbic Bank material, in secondary school curriculum (Standard Bank, 2008).

In Egypt the Population Council implements the programme Ishraq: Bringing Marginalized Rural Girls into Safe Learning Spaces in Upper Egypt, which is similar to the Enhancing the Economic, Health, and Social Capabilities of Highly Vulnerable Youth carried out by the same organisation in South Africa. The initiative consists of training on literacy and life skills for out-of-school and vulnerable girls in rural Egypt as a means to improving their educational, health, and social opportunities. The programme includes a financial literacy curriculum focused on basic skills related to earning, budgeting, and saving (Brady et al., 2007).

Microfinance Opportunities and the MasterCard Foundation collaborate with local microfinance and private sector institutions in Zambia and Malawi (among African countries) to implement the Consumer Education for Branchless Banking (CEBB) programme, using financial education to support branchless banking among low-income populations (Microfinance Opportunities, 2011a).

In some Western African countries (Burkina Faso, Mali, and Senegal) and in Madagascar the Coopération Monégasque (Monaco’s development agency) finances training of MFIs staff through the
Participatory Microfinance Group for Africa (PAMIGA). The objectives of the project include raising awareness of MFIs about consumers’ protection through financial literacy training and supporting MFIs in the delivery of financial education to their clients (Direction de la Coopération Internationale, 2010).

Junior Achievement is a non-profit organisation funded by the private sector aiming to prepare young people to be economically active. Junior Achievement is operating in various African countries (e.g., Nigeria, Uganda, Zambia) teaching young people business skills and exposing them to the entrepreneurial world. Financial education is one of the subjects covered in these programmes, and is taught during regular school hours and in community centres (to reach out-of-schools youth) (MasterCard Foundation et al., 2011).

CARE Burundi carries out the programme Ishaka: Courage for the future, delivering financial education training to adolescent girls in urban and rural parts of the country within Village Savings and Loan Groups (VSLG). The project aims to educate girls to access safe savings and financial resources, and improve their life skills during the transitions from adolescence to adulthood. Training is delivered through girls’ clubs by community volunteers trained by CARE. The training is based on a curriculum designed by Microfinance Opportunities and is reinforced through radio programs and comic books (Morcos and Sebstad, 2011).

The HSBC Global Education Trust and Students in Free Enterprise (SIFE) implemented various financial education programmes in 2005-2007 in some countries, including African ones (i.e., Egypt, Lesotho, Morocco, and South Africa). SIFE’s network was used to deliver community projects providing financial literacy to a wide range of audiences (children, students, out-of-school youths, adults, female entrepreneurs, etc.) and through various channels (SIFE, 2008).

6. Conclusions and preliminary guidance

The African development situation is not uniform across the continent and disparities both within and between countries are common. Yet, many African countries are faced with numerous challenges in social and economic terms, including high poverty rates, low enrolment to primary education, and limited access to formal financial services and products.

These challenges make financial education in Africa particularly relevant, alongside other social and economic development policies, including especially financial inclusion and financial consumer protection interventions. Financial education is indeed crucial in empowering consumers to manage their resources efficiently in a context of scarce resources, and to profit successfully from entrepreneurial opportunities. Moreover, higher financial literacy can promote the demand for financial products and services, increasing awareness, confidence and ability in using them.

This stock-taking exercise has identified several financial education initiatives implemented in Africa, showing an uneven state of development. In a limited set of countries, public authorities are in the process of developing their national strategies for financial education, while in others public institutions have implemented various initiatives at the national level (but not fully-fledged national strategies). Aside from nationally coordinated initiatives, a range of stakeholders, including NGOs, MFIs and financial institutions have implemented several scattered financial education programmes.

Based on this first exercise, a number of general challenges concerning the development and the implementation of financial education programmes in Africa have been identified. In this respect, the
OECD INFE work can offer preliminary guidance to help address these issues (see, in particular, the INFE High-level principles on National Strategies for Financial Education, OECD INFE 2012c).

Even though in some countries public authorities (governments and central banks) are engaged in the development of national strategies for financial education, a large number of initiatives – mostly implemented by non-for-profit organisations and the private sector – lack nation-wide coordination. Public institutions should be more involved in financial education and should seek to develop national strategies, in coordination with other relevant stakeholders. This would raise awareness on the importance of financial education for the population, avoid duplication of resources, allow better identification of needs and gaps in the population and ensure the promotion of efficient delivery practices. This process would also involve:

- better monitoring of the private sector involvement in developing and delivering financial education programmes across African countries;
- encouraging the measurement of financial literacy to better identify main policy priorities, target population and other needs (for example using the OECD and World Bank measurement tools);
- strengthening the introduction of financial education in schools wherever possible, especially given the large share of young people in the population (see the OECD INFE guidelines on financial education in schools, OECD, 2012b; OECD INFE, 2012b);
- improving women’s empowerment, including through financial education initiatives (Hung et al, 2012; OECD, 2012a);
- encouraging the systematic evaluation of programmes to improve their delivery and relevance (for example using the available evaluation tools developed by the OECD and the World Bank).

APPENDIX A – AFRICAN DEVELOPMENT CONTEXT

While recognising the differences in economic and social terms across and within African countries, it is useful to look at the continent’s overall situation. Even though the economy of some countries or regions grew during the last few decades, the continent’s average per capita Gross National Income (GNI) annual growth was very low for most of the 1980s and 1990s, with a recovery only in the early 2000s (UN, 2010). African economies suffered from the financial and economic crisis of 2008/09, but recovered from the slump with a 4.9% average rate of growth in 2010 (AfDB et al., 2011). The spell of growth contributed to poverty rates reduction, but it was not enough to make a significant impact. Various factors account for this. Much of Africa’s growth originated from sectors weakly linked to the rest of the economy (such as oil and mineral), with little impact on the creation of jobs and the reduction of poverty. Moreover, significant income inequality implied that the benefits of growth were unequally distributed to the richest parts of the population and trickled down to the poorest only to a limited extent (AfDB et al., 2011). As a matter of fact, sub-Saharan Africa remains the poorest region in the world, with about half of its population living on less than $1.25 a day. In addition, many African countries are burdened by heavy debt loads, as evidenced by the 155 Paris Club restructurings of African countries’ debt between 1980 and 2001, that is many more than for any other region (Sachs et al., 2004).

In addition to the macro-economic situation, the UN Millennium Development Goals Indicators provide useful statistics on human development (some of these statistics are collected in Table 3). On average Africa’s population is very young, with about 40% of the population being younger than 16, and only about 3% older than 65 (UN, 2008). Even though Sub-Saharan countries considerably improved their enrolment rates in primary school, with an 18-percentage-point gain between 1999 and 2009, primary school enrolment remains among the lowest in the world (76.2% in sub-Saharan Africa vs. 89% in other developing countries), with girls displaying lower enrolment ratios than boys. The enrolment ratio of girls to boys in sub-Saharan Africa is relatively high in primary education (92%), but it becomes smaller in higher grades (79% in secondary education, and 63% in tertiary, UN, 2011)14.

Analogously, wide gaps remain in women’s access to paid work (however, this is true to some extent for other regions of the world too). This gap is more pronounced in Northern Africa, where the share of women in non-agricultural paid employment is less than 20%, than in sub-Saharan Africa, where it is more similar to other developing regions (around 33%). Another frequently observed feature of African countries’ labour markets is the size of the informal sector. The percentage of own-account and unpaid family workers in total employment – taken as a measure of “vulnerable employment”, characterized by informal working arrangements, lack of adequate social protection, low pay and difficult working conditions – is very high in sub-Saharan Africa (around 75%). This is much higher for women (84%) than for men (69%).

14 Note that cross-regional differences in the ratios of girls to boys in education are not exclusively explained by the differences in ratios of girls to boys in the population of the same age. For instance, the ratio of girls to boys aged less than 15 is around 0.94-0.98 in most regions in the world (with the exception of eastern Asia where it is less than 0.90) (UN, 2008).
Sub-Saharan Africa remains the region in the world with the highest HIV incidence. The incidence rate was 0.57% in 1999 and 0.4% in 2009, meaning that four adults out of 1,000 were newly infected that year (leading to a total of 1.8 million new infections in the region in 2009).

Data sources description

The FinScope surveys are an initiative of the a FinMark Trust, a not-for-profit trust registered in South Africa and established in March 2002 with initial funding from the UK DFID (FinScope, various years). The surveys are nationally representative of the adult population and collect information on the use of financial services – formal and informal – as well as attitudes, behaviour, quality-of-life factors and consumption patterns. South Africa was the first to implement FinScope in 2002 and has been running annual surveys ever since. Botswana, Kenya, Nigeria, Tanzania, Uganda and Zambia have results for two waves, while Ghana, Malawi, Mozambique, Namibia, Rwanda and Swaziland collected only one cross-section (not considering initial pilot studies). Only the most recent results for each country are presented here. The surveys follow a standardized approach, even though there are some small methodological differences (e.g. while in most cases the target population is aged 18+, for some countries it is 16+). In each country the questionnaire is modified to keep into account local financial markets conditions (e.g., terminology describing informal products, such as informal saving clubs, etc.). The surveys are typically funded by combinations of international organisations, foreign development agencies, local public authorities and private financial institutions. Even though the surveys do not provide a clear distinction between holding formal financial products and actually using them, they allow to distinguish the extent of financial access to banking and non-banking, and to formal and informal financial products.

The World Bank report “Finance for All” contains a composite measure of access to financial service for a very large number of countries, combining household survey data with own estimates (WB, 2008). Finally, a 2009 Gallup survey reports the percentage of adults having a bank account in 18 sub-Saharan African countries (Gallup, 2010).

Comparison of the FinScope, Gallup and World Bank data on financial inclusion

Various methodological differences may account for the disparity in figures across the three sources (FinScope, various years; Gallup, 2010; WB, 2008). Based on the information available from the three sources, we attempt a discussion of their differences.

The FinScope and Gallup surveys collected data with a common methodology across countries, thus allowing cross-country comparability, but have a limited geographical coverage. On the contrary, the WB exercise collects figures for a much larger number of countries, but combines data obtained from potentially non-homogenous sources (i.e., household surveys – collected with potentially different methodologies – for the countries where such surveys are available, and estimates for the countries where national surveys are missing).

FinScope surveys measure the proportion of the adult population having or using a banking product; the Gallup survey measures the proportion of the adult population having a bank account; the WB data are taken from Honohan (2007) and combine different definitions of financial access according to country availability: the figure represents the proportion of households / adult population having a bank account where this figure is available, or an estimate of the above figure based on the number of accounts in
banks and MFIs. Moreover, there are other potential reasons why the results provided by the three sources diverge. Most survey data used by the WB report are based on surveys collected in the early 2000s, while FinScope data are more recent (most of them refer to 2008-2010) and the Gallup survey refers to 2009. This would suggest that WB figures should be lower than FinScope and Gallup ones. Some WB figures are based on household access rather than individual access. It is reasonable to expect the proportion of households with an account to be larger than the proportion of adults with an account. Finally, some WB estimated figures take into account the proportion of adults holding accounts at microfinance institutions, savings and credit cooperatives, credit unions, etc. This is likely to make the WB figures larger than the FinScope ones, which are based on bank products only.

Other data sources

Other sources provide indications of the extent of bank access in some macro-regions. The Central Bank of the West African States (Banque Centrale des États de l’Afrique de l’Ouest, BCEAO) estimates that more than 10% of the total population of the West African Economic and Monetary Union (Union Économique et Monétaire Ouest-Africaine, UEMOA) has access to financial services provided by banks and microfinance institutions (BCEAO, 2009). The Bank of Central African States (Banque des États de l'Afrique Centrale, BEAC) indicates that also in the Economic and Monetary Community of Central Africa (Communauté Économique et Monétaire de l’Afrique Centrale, CEMAC) the average rate of access to banking is below 10% (BEAC, 2011).
APPENDIX C – GLOSSARY

African regions: According to the United Nations classification of countries by major area and region of the world, Africa is divided into the following five regions: Eastern Africa, Middle Africa, Northern Africa, Southern Africa, and Western Africa. The same source designates sub-Saharan Africa as all of Africa except northern Africa, with the Sudan and South Sudan included in sub-Saharan Africa. The list of countries belonging to each region can be found at: http://esa.un.org/unpd/wup/CD-ROM_2009/WPP2009_DEFINITION_OF_MAJOR_AREAS_AND_REGIONS.pdf

Challenge fund: a grant aimed at projects or companies that have the potential to overcome a particular challenge.

Index-based insurance: whether indexed risk management products represent a newly developed alternative to the traditional crop insurance programs for smallholder farmers in the emerging markets. These products are based on local weather indices, ideally highly correlated to local yields. Indemnifications are triggered by pre-specified patterns of the index, not by actual yields. This reliance on factors beyond the control of farmers reduces the occurrence of moral hazard and adverse selection. It also eliminates the need for field visits, which speeds up claim settlement and significantly reduces costs (http://www.un.org/esa/sustdev/publications/innovationbriefs/no2.pdf).

Living standard measures: the Living Standards Measure is marketing research tool in Southern Africa developed by the South African Advertising Research Foundation. It divides the population into 10 groups, from 10 (highest) to 1 (lowest). It is based on access to services and durables, and geographic indicators as determinants of standard of living. (http://www.saarf.co.za/LSM/lsms.htm).

Own account workers: own-account workers are those workers who, working on their own account or with one or more partners, hold the type of job defined as a self-employed job, and have not engaged on a continuous basis any employees to work for them during the reference period (http://stats.oecd.org/glossary/detail.asp?ID=1986).

Poverty rate: absolute poverty refers to being unable to afford basic human needs. It is usually measured with respect to a set standard which is consistent over time and between countries. For instance, the World Bank defines extreme poverty as living on less than US $1.25 (PPP) per day. Relative poverty views poverty as socially defined and dependent on social context. Usually, it is measured as the percentage of population with income less than some fixed proportion of median income (e.g., 50% or 60% or less of the median household income in the country in a given year).

Quasi-experimental design: experimental design where the assignment of the subjects to treatment/control groups is not random.

Treatment/control groups: in the design of experiments, the treatment group includes the experimental units (e.g. individuals, household, villages, etc.) receiving a “treatment” (policy, intervention, programme, etc.). The units in the control group do not receive the treatment.

Note:

- PUBLIC SECTOR INITIATIVES collects initiatives that are exclusively designed and implemented by public authorities (however, this only includes initiatives already implemented or underway, not plans about developing financial literacy frameworks);
- INITIATIVES BY NON-FOR-PROFIT SECTOR/RESEARCH/INTL. ORG.: collects initiatives undertaken by non-for-profit organisations (whose main - albeit not only- sources of funding are public bodies), by research institutions, international organisations, and foreign development agencies;
- PARTNERSHIPS: collects initiatives of public/private or non-profit/private partnerships. In particular, this part includes initiatives jointly implemented by public and private institutions; initiatives of the private sector (including commercial MFIs) funded by foreign development agencies; and initiatives implemented by NGOs and funded by private institutions;
- PRIVATE: collects initiatives implemented and funded completely by the private sector.
