Reader’s Guide

Data underlying the figures
The data tables are listed in Annex B and available online at [http://dx.doi.org/10.1787/edu-data-en](http://dx.doi.org/10.1787/edu-data-en).

Four symbols are used to denote missing data:

- **a** The category does not apply in the country concerned. Data are therefore missing.
- **c** There are too few observations or no observation to provide reliable estimates (i.e. there are fewer than 30 students or less than five schools with valid data).
- **m** Data are not available. These data were not submitted by the country or were collected but subsequently removed from the publication for technical reasons.
- **w** Data have been withdrawn or have not been collected at the request of the country concerned.

Country coverage
This publication features data on 64 countries and economies: 34 OECD countries (indicated in black in the figures) and 30 partner countries and economies (indicated in blue in the figures).

Calculating international averages
An OECD average was calculated for most indicators presented in this report. The OECD average corresponds to the arithmetic mean of the respective country estimates. Readers should, therefore, keep in mind that the term “OECD average” refers to the OECD countries included in the respective comparisons.

Rounding figures
Because of rounding, some figures in tables may not exactly add up to the totals. Totals, differences and averages are always calculated on the basis of exact numbers and are rounded only after calculation. All standard errors in this publication have been rounded to one or two decimal places. Where the value 0.00 is shown, this does not imply that the standard error is zero, but that it is smaller than 0.005.

Bolding of estimates
This report discusses only statistically significant differences or changes (statistical significance at the 5% level). These are denoted in darker colours in figures and in bold in tables.
Reporting student data

The report uses “15-year-olds” as shorthand for the PISA target population. PISA covers students who are aged between 15 years 3 months and 16 years 2 months at the time of assessment and who have completed at least 6 years of formal schooling, regardless of the type of institution in which they are enrolled and of whether they are in full-time or part-time education, of whether they attend academic or vocational programmes, and of whether they attend public or private schools or foreign schools within the country.

Reporting school data

The principals of the schools in which students were assessed provided information on their schools’ characteristics by completing a school questionnaire. Where responses from school principals are presented in this publication, they are weighted so that they are proportionate to the number of 15-year-olds enrolled in the school.

Indices used in this report

Some analyses in this report are based on synthetic indices. Student questionnaire indices summarise information from several related questionnaire responses into a single global measure. The construction of the following indices is detailed in the PISA 2012 Technical Report (OECD, 2014):

• Index of ICT use at school
• Index of ICT use outside of school for leisure
• Index of ICT use outside of school for schoolwork
• Index of computer use in mathematics lessons
• Four indices of mathematics teachers’ behaviour (student orientation, formative assessment, structuring practices, cognitive activation strategies)
• Index of disciplinary climate in mathematics lessons
• PISA index of economic, social and cultural status

In addition, two indices used in Chapter 4 of this report were derived to describe students’ interactions with digital reading tasks in the computer-based assessment of digital reading:

• Index of overall browsing activity
• Index of task-oriented browsing

**Further documentation**

For further information on the PISA assessment instruments and the methods used in PISA, see the *PISA 2012 Technical Report* (OECD, 2014).

**StatLinks**

This report uses the OECD StatLinks service. Below each table and chart is a url leading to a corresponding Excel™ workbook containing the underlying data. These urls are stable and will remain unchanged over time. In addition, readers of the e-books will be able to click directly on these links and the workbook will open in a separate window, if their Internet browser is open and running.

**Note regarding Israel**

The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.
