LIST OF TABLES AVAILABLE ON LINE

**ANNEX A****LIST OF TABLES AVAILABLE ON LINE**

The following tables are available in electronic form only.

Chapter 1 Why access to mathematics matters and how it can be measured

<http://dx.doi.org/10.1787/888933377718>

WEB	Table 1.1a	Numeracy skills used at work, all workers
WEB	Table 1.1b	Numeracy skills used at work, by wage
WEB	Table 1.2	Relationship between years of education and numeracy, and economic and social outcomes
WEB	Table 1.3	Coverage of selected mathematics topics in the intended and implemented curriculum
WEB	Table 1.4	Responsibility for choosing textbooks, course content and courses availability
WEB	Table 1.5	Use of standardised practices for curriculum and teaching
WEB	Table 1.6	Change between 2003 and 2012 in the time spent in mathematics classes
WEB	Table 1.7	Students' self-reported familiarity with mathematics concepts
WEB	Table 1.8	Students' self-reported familiarity with algebraic and geometric concepts
WEB	Table 1.9a	Indices of exposure to applied and pure mathematics
WEB	Table 1.9b	Students' self-reported exposure to applied and pure mathematics tasks at school
WEB	Table 1.10	Indices of exposure to applied and pure mathematics, and familiarity with mathematics concepts, by grade
WEB	Table 1.11a	Exposure to algebraic word problems during mathematics lessons and assessments
WEB	Table 1.11b	Exposure to contextualised mathematics problems during mathematics lessons and assessments
WEB	Table 1.11c	Exposure to procedural mathematics tasks during mathematics lessons and assessments
WEB	Table 1.11d	Exposure to pure mathematics problems during mathematics lessons and assessments
WEB	Table 1.12	Correlation among exposure to different types of mathematics problems during mathematics lessons

Chapter 2 Variations in exposure to and familiarity with mathematics

<http://dx.doi.org/10.1787/888933377728>

WEB	Table 2.1	Variation in familiarity with mathematics
WEB	Table 2.2	Variation in familiarity with mathematics, explained by students' and schools' socio-economic profile
WEB	Table 2.3	Mathematics learning time at school, by students' socio-economic status
WEB	Table 2.4a	Exposure to applied and pure mathematics, by socio-economic status
WEB	Table 2.4b	Familiarity with mathematics, by socio-economic status
WEB	Table 2.5a	Familiarity with mathematics concepts, by parents' highest level of education
WEB	Table 2.5b	Familiarity with mathematics concepts, by gender
WEB	Table 2.6	Percentage of immigrants in schools, by school-level familiarity with mathematics
WEB	Table 2.7	Familiarity with mathematics, by immigrant background
WEB	Table 2.8	Effects of ethnic diversity on the learning environment, by schools' socio-economic profile
WEB	Table 2.9a	Percentage of students who attended at least one year of pre-primary education, by students' socio-economic status
WEB	Table 2.9b	Familiarity with mathematics and attendance at pre-primary education
WEB	Table 2.10	Familiarity with mathematics concepts and students' characteristics
WEB	Table 2.11	Parents' preferences for schools, by socio-economic status
WEB	Table 2.12	Academic selectivity and equity in familiarity with mathematics
WEB	Table 2.13	Residency requirements and equity in familiarity with mathematics
WEB	Table 2.14	Familiarity with mathematics and students' socio-economic status, by level of education
WEB	Table 2.15	Grade repetition and equity in familiarity with mathematics
WEB	Table 2.16	Age at first tracking and equity in familiarity with mathematics
WEB	Table 2.17	Enrolment in vocational school and likelihood of socio-economic disadvantage and/or being less familiar with mathematics
WEB	Table 2.18	Effects of ability differences on the learning environment, by schools' socio-economic status
WEB	Table 2.19a	Prevalence of ability grouping, by schools' socio-economic profile
WEB	Table 2.19b	Ability grouping and students' familiarity with mathematics
WEB	Table 2.20a	Percentage of students attending advanced mathematics classes, by students' socio-economic status
WEB	Table 2.20b	Attendance of advanced mathematics classes and students' socio-economic status
WEB	Table 2.21	Teachers' beliefs about the need to adapt academic standards to ability

...

WEB	Table 2.22	Teachers assigning different tasks to students based on ability, by schools' socio-economic profile
WEB	Table 2.23	School transfers and equity in familiarity with mathematics
WEB	Table 2.24	Student-teacher ratio and the percentage of qualified mathematics teachers
WEB	Table 2.25a	Teachers' use of cognitive-activation strategies, by schools' socio-economic profile
WEB	Table 2.25b	Teachers' use of cognitive-activation strategies and students' performance in mathematics, by schools' socio-economic profile
WEB	Table 2.25c	Teachers' use of cognitive-activation strategies and students' familiarity with mathematics, by schools' socio-economic profile
WEB	Table 2.26	Disciplinary climate and familiarity with mathematics, by students' socio-economic status

Chapter 3 Exposure to mathematics and performance in PISA

<http://dx.doi.org/10.1787/888933377738>

WEB	Table 3.1	Comparing countries/economies on the different mathematics content subscales
WEB	Table 3.2a	Mean score on mathematics subscales
WEB	Table 3.2b	Difficulty of PISA tasks, by content area
WEB	Table 3.3a	Change between 2003 and 2012 in mathematics performance across content areas
WEB	Table 3.3b	Change between 2003 and 2012 in the percentage of students answering correctly to mathematics items across content areas
WEB	Table 3.4a	Average performance in mathematics, reading and science, by time spent per week in school lessons
WEB	Table 3.4b	Average performance in mathematics, reading and science, by time spent per week in after-school lessons
WEB	Table 3.5	Mathematics performance and instruction time, after accounting for school characteristics
WEB	Table 3.6	Disciplinary climate, by time spent per week in school lessons
WEB	Table 3.7	Relationship between exposure to mathematics content and performance in mathematics
WEB	Table 3.8a	Performance in mathematics, by exposure to algebraic word problems during mathematics lessons
WEB	Table 3.8b	Performance in mathematics, by exposure to contextualised mathematics problems during mathematics lessons
WEB	Table 3.8c	Performance in mathematics, by exposure to procedural tasks during mathematics lessons
WEB	Table 3.8d	Performance in mathematics, by exposure to pure mathematics problems during mathematics lessons
WEB	Table 3.9	Average performance in mathematics, by levels of exposure to applied and pure mathematics
WEB	Table 3.10	Exposure to mathematics and the likelihood of top and low performance
WEB	Table 3.11	Difference in mathematics performance across grades related to exposure to pure mathematics
WEB	Table 3.12	Familiarity with mathematics and success on PISA items, by items' difficulty
WEB	Table 3.13	Familiarity with mathematics and performance on a very difficult mathematics task
WEB	Table 3.14	Familiarity with mathematics and performance on the most difficult mathematics task
WEB	Table 3.15	Familiarity with mathematics and success on complex items
WEB	Table 3.16	Differences in performance related to exposure to mathematics, by socio-economic status
WEB	Table 3.17	Socio-economic status and mathematics performance, by item difficulty
WEB	Table 3.18	Relationship between socio-economic status and success on PISA mathematics tasks, by required mathematics competencies

Chapter 4 Opportunity to learn and students' attitudes towards mathematics

<http://dx.doi.org/10.1787/888933377744>

WEB	Table 4.1	Change between 2003 and 2012 in the percentage of students enjoying or interested in mathematics
WEB	Table 4.2	Mathematics self-concept, by gender and students' socio-economic status
WEB	Table 4.3	Mathematics anxiety, by gender and students' socio-economic status
WEB	Table 4.4a	Mathematics intentions, by gender and students' socio-economic status
WEB	Table 4.4b	Students' motivation to learn science, by gender and socio-economic status
WEB	Table 4.4c	Students' career expectations, by gender and socio-economic status
WEB	Table 4.5a	Students' mathematics self-concept
WEB	Table 4.5b	Relationship between exposure to pure mathematics and mathematics self-concept
WEB	Table 4.6	Relationship between exposure to mathematics and mathematics self-concept
WEB	Table 4.7a	Relationship between frequent exposure to mathematics tasks in lessons and mathematics self-concept
WEB	Table 4.7b	Relationship between frequent exposure to mathematics tasks in lessons and mathematics anxiety
WEB	Table 4.7c	Relationship between frequent exposure to mathematics tasks in tests and mathematics self-concept
WEB	Table 4.7d	Relationship between frequent exposure to mathematics tasks in tests and mathematics anxiety
WEB	Table 4.7e	Percentage of students who are more frequently exposed to mathematics tasks in tests than in lessons
WEB	Table 4.7f	Relationship between more frequent exposure to mathematics tasks in tests than in lessons and mathematics anxiety
WEB	Table 4.8a	Students' mathematics anxiety
WEB	Table 4.8b	Relationship between exposure to pure mathematics and mathematics anxiety
WEB	Table 4.9	Relationship between exposure to mathematics and mathematics anxiety

...

WEB	Table 4.10a	Relationship between exposure to and familiarity with mathematics and mathematics self-concept, by level of performance
WEB	Table 4.10b	Relationship between exposure to and familiarity with mathematics and mathematics anxiety, by level of performance
WEB	Table 4.11	Motivation to learn mathematics and peers' attitudes, by schools' average level of familiarity with mathematics
WEB	Table 4.12a	Students who reported that their peers work hard in mathematics, by schools' average level of familiarity with mathematics
WEB	Table 4.12b	Mathematics self-concept and relative familiarity with mathematics compared with schoolmates
WEB	Table 4.13	After-school study time with parents, by students' familiarity with mathematics
WEB	Table 4.14a	Students' mathematics anxiety, by students' performance
WEB	Table 4.14b	Relationship between parents' attitudes towards mathematics and students' anxiety, by performance
WEB	Table 4.15	Relationship between teachers' communication and students' mathematics anxiety, by students' familiarity with mathematics
WEB	Table 4.16	Relationship between teaching practices and students' mathematics self-concept, by students' familiarity with mathematics
WEB	Table 4.17	Students' interest in mathematics and their use of computers in mathematics lessons
WEB	Table 4.18	Performance gap between disadvantaged and other students, by context of task
WEB	Table 4.19	Relationship between exposure to pure mathematics and mathematics performance, by interest in mathematics
