

EDUCATION AT A GLANCE 2014

Education at a Glance: OECD Indicators is the authoritative source for accurate and relevant information on the state of education around the world. It provides data on the structure, finances and performance of the education systems in the 34 OECD member countries, as well as a number of G20 and partner countries.

Ireland

A promising outlook: as of 2012, 93% of young people in Ireland were expected to graduate from upper secondary education in their lifetimes.

In 2012, 100% of 5-14 year-olds in Ireland were enrolled in education. Of these young people, **93% are expected to obtain an upper secondary diploma in their lifetimes, while 46% are expected to graduate from university as of 2012.** These expected graduation rates are far higher than the OECD averages; in 2012, the OECD average graduation rate for secondary education was 84%, while the graduation rate for tertiary education was 39%. Graduation rates in Ireland for both upper secondary and tertiary education are slightly higher for women than for men, with an upper secondary graduation rate in 2012 of 95% for women compared with 92% for men, and a university graduation rate of 52% for women and 39% for men.

Despite these projected gains in education, unemployment continues to remain at high levels.

Despite high rates of educational achievement, Ireland still faces higher unemployment rates than most OECD and EU21* countries, with an unemployment rate of 13% for 25-64 year-olds across all levels of education in 2012. **Ireland had the fifth highest unemployment rates of OECD countries for 25-64 year-olds with less than secondary (23%) or tertiary (7%) education, and the third-highest unemployment rate for 25-64 year-olds with upper secondary and post-secondary non-tertiary education (15%).** Irish women had slightly lower rates of unemployment than the population as a whole, with 2012 unemployment rates of 15% for women with less than secondary education, 12% for women with upper secondary or post-secondary non-tertiary education, and 6% for women with tertiary education.

In addition to these comparatively high unemployment rates for all ages, **as of 2012 the proportion of young people in Ireland who were neither employed nor in education or training (NEETs) was well above average for EU21 and OECD countries.** Although the percentage of Irish 15-29 year-old NEETs decreased slightly from 2011 to 2012 (from 22% to 21%), this proportion is still far higher than the EU21 and OECD average of 15%. While individuals with tertiary education experienced the largest change in this phenomenon after the onset of the global economic crisis, 2012 marked the third straight year in which the proportion of NEET tertiary education graduates decreased (from 13.9% to 13.5%). Between 2010 and 2012, NEET rates for individuals with less than a secondary education were between 23% and 24%, compared with EU21 and OECD averages of 15% to 16% for this group over the same period.

Ireland invests more in education per student than most OECD countries.

Ireland had the third greatest annual expenditure per student in all OECD countries by public educational institutions for all services excluding research and development (R&D). In 2011, Irish educational institutions spent USD 11 938 per student on average, compared with an OECD average of USD 9 635 and an EU21 average of USD 8 741. The only OECD countries with greater educational expenditure per student were Canada (USD 17 006) and the United States (USD 23 094). In 2011, public expenditure on educational institutions represented 6.2% of Ireland's GDP, an increase from 4.2% in 2000 and 5.7% in 2008. While this expenditure is slightly above the average share of GDP expenditure for OECD countries of 5.6% in 2011, it is far below the highest values, which were in the Scandinavian countries (spending between 6.8% and 8.8% of GDP in 2011).

Other findings

- **Teachers in Ireland are well paid by OECD and EU21 standards:** in 2012, the statutory salaries for primary, lower secondary and upper secondary teachers in Ireland were higher than OECD and EU21 averages at all levels of experience (given minimum training).
- **Early childhood education (ECE) enrolment in Ireland defies EU21 and OECD norms:** in 2012, 42% of 3-year-olds in Ireland participated in early education, an enrolment rate far lower than the EU21 average of 79% and the OECD average of 70% in the same year. For 4-year-olds, however, Ireland's enrolment rate was far higher than the average for OECD or EU21 countries; in 2012, 97% of Irish 4-year-olds were enrolled in ECE, while the EU21 and OECD country enrolment averages were 89% and 84% respectively.
- **In Ireland, the earnings premium from tertiary education is greater for women than for men:** in 2011, the earnings premium for 25-64 year-olds with tertiary education (as compared to individuals with upper secondary or post-secondary non-tertiary education at a value of 100) was 169 for men and 190 for women, compared with OECD average earning premiums of 164 and 162, respectively. Of the 32 OECD countries for which these data are available in 2012, 14 countries (in addition to Ireland) reported earnings premiums of tertiary education to be higher for women than for men.

* EU21 countries are those that are members of both the European Union and the OECD. These 21 countries are Austria, Belgium, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Luxembourg, the Netherlands, Poland, Portugal, the Slovak Republic, Slovenia, Spain, Sweden and the United Kingdom.
