Programme for International Student Assessment: An Overview

Participation.....	21
Features of PISA.....	22
Managing and implementing PISA.....	23
Organisation of this report.....	23

The OECD Programme for International Student Assessment (PISA) is a collaborative effort among OECD member countries to measure how well 15-year-old students approaching the end of compulsory schooling are prepared to meet the challenges of today's knowledge societies. The assessment is forward-looking: rather than focusing on the extent to which these students have mastered a specific school curriculum, it looks at their ability to use their knowledge and skills to meet real-life challenges. This orientation reflects a change in curricular goals and objectives, which are increasingly concerned with what students can do with what they learn at school.

PISA surveys take place every three years. The first survey took place in 2000 (followed by a further 11 countries in 2001), the second in 2003 and the third in 2006; the results of these surveys have been published in a series of reports (OECD, 2001, 2003, 2004, 2007) and a wide range of thematic and technical reports. The next survey will occur in 2009. For each assessment, one of the three areas (science, reading and mathematics) is chosen as the major domain and given greater emphasis. The remaining two areas, the minor domains, are assessed less thoroughly. In 2000 the major domain was reading; in 2003 it was mathematics and in 2006 it was science.

PISA is an age-based survey, assessing 15-year-old students in school in grade seven or higher. These students are approaching the end of compulsory schooling in most participating countries, and school enrolment at this level is close to universal in almost all OECD countries.

The PISA assessments take a literacy perspective, which focuses on the extent to which students can apply the knowledge and skills they have learned and practised at school when confronted with situations and challenges for which that knowledge may be relevant. That is, PISA assesses the extent to which students can use their reading skills to understand and interpret the various kinds of written material that they are likely to meet as they negotiate their daily lives; the extent to which students can use their mathematical knowledge and skills to solve various kinds of numerical and spatial challenges and problems; and the extent to which students can use their scientific knowledge and skills to understand, interpret and resolve various kinds of scientific situations and challenges. The PISA 2006 domain definitions are fully articulated in *Assessing Scientific, Reading and Mathematical Literacy: A Framework for PISA 2006* (OECD, 2006).

PISA also allows for the assessment of additional cross-curricular competencies from time to time as participating countries see fit. For example, in PISA 2003, an assessment of general problem-solving competencies was included. Further, PISA uses student questionnaires to collect information from students on various aspects of their home, family and school background, and school questionnaires to collect information from schools about various aspects of organisation and educational provision in schools. In PISA 2006 a number of countries¹ also administered a parent questionnaire to the parents of the students participating in PISA.

Using the data from these questionnaires, analyses linking contextual information with student achievement could address:

- Differences between countries in the relationships between student-level factors (such as gender and social background) and achievement;
- Differences in the relationships between school-level factors and achievement across countries;
- Differences in the proportion of variation in achievement between (rather than within) schools, and differences in this value across countries;
- Differences between countries in the extent to which schools moderate or increase the effects of individual-level student factors and student achievement;

- Differences in education systems and national context that are related to differences in student achievement across countries;
- Through links to PISA 2000 and PISA 2003, changes in any or all of these relationships over time.

Through the collection of such information at the student and school level on a cross-nationally comparable basis, PISA adds significantly to the knowledge base that was previously available from national official statistics, such as aggregate national statistics on the educational programmes completed and the qualifications obtained by individuals.

PARTICIPATION

The first PISA survey was conducted in 2000 in 32 countries (including 28 OECD member countries) using written tasks answered in schools under independently supervised test conditions. Another 11 countries completed the same assessment in 2001. PISA 2000 surveyed reading, mathematical and scientific literacy, with a primary focus on reading. The second PISA survey, conducted in 2003 in 41 countries, assessed reading, mathematical and scientific literacy, and problem solving with a primary focus on mathematical literacy. The third survey covered reading, mathematical and scientific literacy, with a primary focus on scientific literacy, and was conducted in 2006 in 57 countries. In some countries it was decided to carry out detailed analysis of some regions. In these 24 sub-national regions sufficient data were collected and quality control mechanisms implemented at a level that would permit OECD endorsement of their results. The participants in PISA 2006 are listed in Table 1.1. This report is concerned with the technical aspects of PISA 2006.

Portugal	Slovenia
Slovak Republic	Chinese Taipei
Spain	Thailand
Sweden	Tunisia
Switzerland	Uruguay
Turkey	
United Kingdom	
United States	

FEATURES OF PISA

The technical characteristics of the PISA survey involve a number of different challenges:

- The design of the test and the features incorporated into the test developed for PISA are critical;
- The sampling design, including both the school sampling and the student sampling requirements and procedures;
- The multilingual nature of the test, which involves rules and procedures designed to guarantee the equivalence of the different language versions used within and between participating countries, and taking into account the diverse cultural contexts of those countries;
- Various operational procedures, including test administration arrangements, data capture and processing and quality assurance mechanisms designed to ensure the generation of comparable data from all countries;
- Scaling and analysis of the data and their subsequent reporting. PISA employs scaling models based on item response theory (IRT) methodologies. The described proficiency scales, which are the basic tool in reporting PISA outcomes, are derived using IRT analysis.

Box 1.1 Core features of PISA 2006

Sample size

- Nearly 400,000 students, representing almost 20 million 15-year-olds enrolled in the schools of the 57 participating countries and economies, were assessed in 2006.

Content

- PISA 2006 covered three domains: reading, mathematics and science.
- PISA 2006 looked at young people's ability to use their knowledge and skills in order to meet real-life challenges rather than how well they had mastered a specific school curriculum. The emphasis was placed on the mastery of processes, the understanding of concepts, and the ability to function in various situations within each domain.

Methods

- PISA 2006 used pencil-and-paper assessments, lasting two hours for each student.
- PISA 2006 used both multiple-choice items and questions requiring students to construct their own answers. Items were typically organised in units based on a passage describing a real-life situation.
- A total of six and a half hours of assessment items was included, with different students taking different combinations of the assessment items.
- Students answered a background questionnaire that took about 30 minutes to complete and, as part of an international option, completed questionnaires on their educational careers as well as familiarity with computers.
- School principals completed questionnaires about their schools.

Outcomes

- A profile of knowledge and skills among 15-year-olds.
- Contextual indicators relating results to student and school characteristics.
- A knowledge base for policy analysis and research.
- Trend indicators showing how results change over time.

This report describes the above-mentioned methodologies as they have been implemented in PISA 2006. Further, it describes the quality assurance procedures that have enabled PISA to provide high quality data to support policy formation and review. Box 1.1 provides an overview of the central design elements of PISA 2006.

The ambitious goals of PISA come at a cost: PISA is both resource intensive and methodologically complex, requiring intensive collaboration among many stakeholders. The successful implementation of PISA depends on the use, and sometimes further development, of state-of-the-art methodologies.

Quality within each of these areas is defined, monitored and assured through the use of a set of technical standards. These standards have been endorsed by the PISA Governing Board, and they form the backbone of implementation in each participating country and of quality assurance across the project.

MANAGING AND IMPLEMENTING PISA

The design and implementation of PISA for the 2000, 2003 and 2006 data collections has been the responsibility of an international consortium led by the Australian Council for Educational Research (ACER) with Ray Adams as international project director. The other partners in this consortium have been the National Institute for Educational Measurement (Cito Group) in the Netherlands, Unité d'analyse des systèmes et des pratiques d'enseignement (aSPe) at Université de Liège in Belgium, Westat and the Educational Testing Service (ETS) in the United States and the National Institute for Educational Research (NIER) in Japan. Appendix 8 lists the consortium staff and consultants who have made significant contributions to the development and implementation of the project.

The consortium implements PISA within a framework established by the PISA Governing Board (PGB) which includes representation from all participating countries at senior policy levels. The PGB established policy priorities and standards for developing indicators, for establishing assessment instruments, and for reporting results. Experts from participating countries served on working groups linking the programme policy objectives with the best internationally available technical expertise in the three assessment areas. These expert groups were referred to as Subject Matter Expert Groups (SMEGs) (see Appendix 8 for members). By participating in these expert groups and regularly reviewing outcomes of the groups' meetings, countries ensured that the instruments were internationally valid and that they took into account the cultural and educational contexts of the different OECD member countries, that the assessment materials had strong measurement potential, and that the instruments emphasised authenticity and educational validity.

Each of the participating countries appointed a National Project Manager (NPM), to implement PISA nationally. The NPM ensured that internationally agreed common technical and administrative procedures were employed. These managers played a vital role in developing and validating the international assessment instruments and ensured that PISA implementation was of high quality. The NPMs also contributed to the verification and evaluation of the survey results, analyses and reports.

The OECD Secretariat had overall responsibility for managing the programme. It monitored its implementation on a day-to-day basis, served as the secretariat for the PGB, fostered consensus building between the countries involved, and served as the interlocutor between the PGB and the international consortium.

ORGANISATION OF THIS REPORT

This technical report is designed to describe the technical aspects of the project at a sufficient level of detail to enable review and, potentially, replication of the implemented procedures and technical solutions to

problems. It, therefore, does not report the results of PISA 2006 which have been published in *PISA 2006: Science Competencies for Tomorrow's World* (OECD, 2007). A bibliography of other PISA related reports is included in Appendix 9.

There are five sections in this report:

- *Section One – Instrument design* (Chapters 1-4): Describes the design and development of both the questionnaires and achievement tests;
- *Section Two – Operations* (Chapters 5-7): Gives details of the operational procedures for the sampling and population definitions, test administration procedures, quality monitoring and assurance procedures for test administration and national centre operations, and instrument translation;
- *Section Three – Data processing* (Chapters 8-10): Covers the methods used in data cleaning and preparation, including the methods for weighting and variance estimation, scaling methods, methods for examining inter-rater variation and the data cleaning steps;
- *Section Four – Quality indicators and outcomes* (Chapters 11-14): Covers the results of the scaling and weighting, reports response rates and related sampling outcomes and gives the outcomes of the inter-rater reliability studies. The last chapter in this section summarises the outcomes of the PISA 2006 data adjudication; that is, the overall analysis of data quality for each country;
- *Section Five – Scale construction and data products* (Chapters 15-18): Describes the construction of the PISA 2006 levels of proficiency and the construction and validation of questionnaire-related indices. The final chapter briefly describes the contents of the PISA 2006 database;
- *Appendices*: Detailed appendices of results pertaining to the chapters of the report are provided.

Notes

1. The PISA 2006 parent questionnaire was administered in Denmark, Germany, Iceland, Italy, Luxembourg, New Zealand, Poland, Portugal, Korea and Turkey, as well as in the partner countries/economies Bulgaria, Colombia, Croatia, Hong Kong-China, Macao-China and Qatar.

▪ School response rates	66
▪ Student response rates	68
Main study school sample	68
▪ Definition of the national target population	68
▪ The sampling frame	69
▪ Stratification	70
▪ Assigning a measure of size to each school	74
▪ School sample selection	74
▪ PISA and TIMSS or PIRLS overlap control	76
▪ Student samples	82
 CHAPTER 5 TRANSLATION AND CULTURAL APPROPRIATENESS OF THE TEST AND SURVEY MATERIAL	 85
Introduction	86
Development of source versions	86
Double translation from two source languages	87
PISA translation and adaptation guidelines	88
Translation training session	89
Testing languages and translation/adaptation procedures	89
International verification of the national versions	91
▪ VegaSuite	93
▪ Documentation	93
▪ Verification of test units	93
▪ Verification of the booklet shell	94
▪ Final optical check	94
▪ Verification of questionnaires and manuals	94
▪ Final check of coding guides	95
▪ Verification outcomes	95

Translation and verification outcomes – national version quality	96
▪ Analyses at the country level.....	96
▪ Analyses at the item level.....	103
▪ Summary of items lost at the national level, due to translation, printing or layout errors.....	104
CHAPTER 6 FIELD OPERATIONS	105
Overview of roles and responsibilities	106
▪ National project managers.....	106
▪ School coordinators.....	107
▪ Test administrators.....	107
▪ School associates.....	108
The selection of the school sample	108
Preparation of test booklets, questionnaires and manuals	108
The selection of the student sample	109
Packaging and shipping materials	110
Receipt of materials at the national centre after testing	110
Coding of the tests and questionnaires	111
▪ Preparing for coding.....	111
▪ Logistics prior to coding.....	113
▪ Single coding design.....	115
▪ Multiple coding.....	117
▪ Managing the process coding.....	118
▪ Cross-national coding.....	120
▪ Questionnaire coding.....	120
Data entry, data checking and file submission	120
▪ Data entry.....	120
▪ Data checking.....	120
▪ Data submission.....	121
▪ After data were submitted.....	121
The main study review	121
CHAPTER 7 QUALITY ASSURANCE	123
PISA quality control	124
▪ Comprehensive operational manuals.....	124
▪ National level implementation planning document.....	124
PISA quality monitoring	124
▪ Field trial and main study review.....	124
▪ Final optical check.....	126
▪ National centre quality monitor (NCQM) visits.....	126
▪ PISA quality monitor (PQM) visits.....	126
▪ Test administration.....	127
▪ Delivery.....	128
CHAPTER 8 SURVEY WEIGHTING AND THE CALCULATION OF SAMPLING VARIANCE	129
Survey weighting	130
The school base weight	131
▪ The school weight trimming factor.....	132

<ul style="list-style-type: none"> ▪ The student base weight 132 ▪ School non-response adjustment..... 132 ▪ Grade non-response adjustment..... 134 ▪ Student non-response adjustment..... 135 ▪ Trimming student weights..... 136 ▪ Comparing the PISA 2006 student non-response adjustment strategy with the strategy used for PISA 2003 136 ▪ The comparison..... 138 	
Calculating sampling variance	139
<ul style="list-style-type: none"> ▪ The balanced repeated replication variance estimator..... 139 ▪ Reflecting weighting adjustments..... 141 ▪ Formation of variance strata..... 141 ▪ Countries where all students were selected for PISA..... 141 	
CHAPTER 9 SCALING PISA COGNITIVE DATA	143
The mixed coefficients multinomial logit model	144
<ul style="list-style-type: none"> ▪ The population model..... 145 ▪ Combined model..... 146 	
Application to PISA	146
<ul style="list-style-type: none"> ▪ National calibrations..... 146 ▪ National reports..... 147 ▪ International calibration 153 ▪ Student score generation..... 153 	
Booklet effects	155
Analysis of data with plausible values	156
Developing common scales for the purposes of trends	157
<ul style="list-style-type: none"> ▪ Linking PISA 2003 and PISA 2006 for reading and mathematics 158 ▪ Uncertainty in the link..... 158 	
CHAPTER 10 DATA MANAGEMENT PROCEDURES	163
Introduction	164
KeyQuest	167
Data management at the national centre	167
<ul style="list-style-type: none"> ▪ National modifications to the database 167 ▪ Student sampling with <i>KeyQuest</i>..... 167 ▪ Data entry quality control 167 	
Data cleaning at ACER	171
<ul style="list-style-type: none"> ▪ Recoding of national adaptations..... 171 ▪ Data cleaning organisation..... 171 ▪ Cleaning reports..... 171 ▪ General recodings..... 171 	
Final review of the data	172
<ul style="list-style-type: none"> ▪ Review of the test and questionnaire data 172 ▪ Review of the sampling data 172 	
Next steps in preparing the international database	172

CHAPTER 11 SAMPLING OUTCOMES	175
Design effects and effective sample sizes	187
▪ Variability of the design effect.....	191
▪ Design effects in PISA for performance variables.....	191
Summary analyses of the design effect	203
▪ Countries with outlying standard errors.....	205
 CHAPTER 12 SCALING OUTCOMES	 207
International characteristics of the item pool	208
▪ Test targeting.....	208
▪ Test reliability.....	208
▪ Domain inter-correlations.....	208
▪ Science scales.....	215
Scaling outcomes	216
▪ National item deletions.....	216
▪ International scaling.....	219
▪ Generating student scale scores.....	219
Test length analysis	219
Booklet effects	221
▪ Overview of the PISA cognitive reporting scales.....	232
▪ PISA overall literacy scales.....	234
▪ PISA literacy scales.....	234
▪ Special purpose scales.....	234
Observations concerning the construction of the PISA overall literacy scales	235
▪ Framework development.....	235
▪ Testing time and item characteristics.....	236
▪ Characteristics of each of the links.....	237
Transforming the plausible values to PISA scales	246
▪ Reading.....	246
▪ Mathematics.....	246
▪ Science.....	246
▪ Attitudinal scales.....	247
Link error	247
 CHAPTER 13 CODING AND MARKER RELIABILITY STUDIES	 249
Homogeneity analyses	251
Multiple marking study outcomes (variance components)	254
▪ Generalisability coefficients.....	254
International coding review	261
▪ Background to changed procedures for PISA 2006.....	261
▪ ICR procedures.....	261
▪ Outcomes.....	264
▪ Cautions.....	270

CHAPTER 14 DATA ADJUDICATION	271
Introduction	272
▪ Implementing the standards – quality assurance	272
▪ Information available for adjudication	273
▪ Data adjudication process	273
General outcomes	274
▪ Overview of response rate issues	274
▪ Detailed country comments	275
 CHAPTER 15 PROFICIENCY SCALE CONSTRUCTION	 283
Introduction	284
Development of the described scales	285
▪ Stage 1: Identifying possible scales	285
▪ Stage 2: Assigning items to scales	286
▪ Stage 3: Skills audit	286
▪ Stage 4: Analysing field trial data	286
▪ Stage 5: Defining the dimensions	287
▪ Stage 6: Revising and refining with main study data	287
▪ Stage 7: Validating	287
Defining proficiency levels	287
Reporting the results for PISA science	290
▪ Building an item map	290
▪ Levels of scientific literacy	292
▪ Interpreting the scientific literacy levels	299
 CHAPTER 16 SCALING PROCEDURES AND CONSTRUCT VALIDATION OF CONTEXT QUESTIONNAIRE DATA	 303
Overview	304
Simple questionnaire indices	304
▪ Student questionnaire indices	304
▪ School questionnaire indices	307
▪ Parent questionnaire indices	309
Scaling methodology and construct validation	310
▪ Scaling procedures	310
▪ Construct validation	312
▪ Describing questionnaire scale indices	314
Questionnaire scale indices	315
▪ Student scale indices	315
▪ School questionnaire scale indices	340
▪ Parent questionnaire scale indices	342
▪ The PISA index of economic, social and cultural status (ESCS)	346
 CHAPTER 17 VALIDATION OF THE EMBEDDED ATTITUDINAL SCALES	 351
Introduction	352
International scalability	353
▪ Analysis of item dimensionality with exploratory and confirmatory factor analysis	353
▪ Fit to item response model	353

▪ Reliability.....	355
▪ Differential item functioning.....	355
▪ Summary of scalability.....	357
Relationship and comparisons with other variables.....	357
▪ Within-country student level correlations with achievement and selected background variables.....	358
▪ Relationships between embedded scales and questionnaire.....	360
▪ Country level correlations with achievement and selected background variables.....	361
▪ Variance decomposition.....	363
▪ Observations from other cross-national data collections.....	363
▪ Summary of relations with other variables.....	364
Conclusion.....	364
CHAPTER 18 INTERNATIONAL DATABASE.....	367
Files in the database.....	368
▪ Student files.....	368
▪ School file.....	370
▪ Parent file.....	370
Records in the database.....	371
▪ Records included in the database.....	371
▪ Records excluded from the database.....	371
Representing missing data.....	371
How are students and schools identified?.....	372
Further information.....	373
REFERENCES.....	375
APPENDICES.....	379
Appendix 1 PISA 2006 main study item pool characteristics.....	380
Appendix 2 Contrast coding used in conditioning.....	389
Appendix 3 Design effect tables.....	399
Appendix 4 Changes to core questionnaire items from 2003 to 2006.....	405
Appendix 5 Mapping of ISCED to years.....	411
Appendix 6 National household possession items.....	412
Appendix 7 Exploratory and confirmatory factor analyses for the embedded items.....	414
Appendix 8 PISA consortium, staff and consultants.....	416

LIST OF BOXES
